

**STATEMENT OF ADDITIONAL INFORMATION**

**WESTWOOD STRATEGIC CONVERTIBLES FUND  
(Formerly, Westwood Strategic Global Convertibles Fund)  
(Institutional Shares Ticker Symbol: WSCIX)**

**a series of THE ADVISORS' INNER CIRCLE FUND**

**July 24, 2017**

**Investment Adviser:  
WESTWOOD MANAGEMENT CORP.**

This Statement of Additional Information (“SAI”) is not a prospectus. This SAI is intended to provide additional information regarding the activities and operations of The Advisors’ Inner Circle Fund (the “Trust”) and the Westwood Strategic Convertibles Fund (the “Fund”). This SAI is incorporated by reference into and should be read in conjunction with the Fund’s prospectus, dated July 24, 2017, as it may be amended from time to time (the “Prospectus”). Capitalized terms not defined herein are defined in the Prospectus. The audited financial statements for the Fund, including the report of Ernst & Young LLP thereon, as contained in the Annual Report for the fiscal year ended October 31, 2016, as well as the unaudited financial statements as contained in the Semi-Annual Report dated April 30, 2017, are incorporated by reference into and deemed to be part of this SAI. A copy of the Fund’s Annual Report and Semi-Annual Report must accompany the delivery of this SAI. Shareholders may obtain copies of the Prospectus, Annual Report or Semi-Annual Report free of charge by writing to the Fund at Westwood Funds, P.O. Box 219009, Kansas City, MO 64121-9009 (Express Mail Address: Westwood Funds, c/o DST Systems, Inc., 430 West 7th Street, Kansas City, MO 64105) or by calling the Fund at 1-877-FUND-WHG (1-877-386-3944).

## THE TRUST

**General.** The Fund is a separate series of the Trust. The Trust is an open-end investment management company established under Massachusetts law as a Massachusetts voluntary association (commonly known as a business trust) under an Amended and Restated Declaration of Trust dated July 18, 1991, as amended and restated February 18, 1997 and amended May 15, 2012 (the “Declaration of Trust”). The Declaration of Trust permits the Trust to offer separate series (“funds”) of shares of beneficial interest (“shares”). The Trust reserves the right to create and issue shares of additional funds. Each fund is a separate mutual fund, and each share of each fund represents an equal proportionate interest in that fund. All consideration received by the Trust for shares of any fund and all assets of such fund belong solely to that fund and would be subject to liabilities related thereto. Each fund of the Trust pays its (i) operating expenses, including fees of its service providers, expenses of preparing prospectuses, proxy solicitation material and reports to shareholders, costs of custodial services and registering its shares under federal and state securities laws, pricing and insurance expenses, brokerage costs, interest charges, taxes and organization expenses, and (ii) pro rata share of the fund’s other expenses, including audit and legal expenses. Expenses attributable to a specific fund shall be payable solely out of the assets of that fund. Expenses not attributable to a specific fund are allocated across all of the funds on the basis of relative net assets. The other funds of the Trust are described in one or more separate statements of additional information.

**Voting Rights.** Each shareholder of record is entitled to one vote for each share held on the record date for the meeting. The Fund will vote separately on matters relating solely to it. As a Massachusetts voluntary association, the Trust is not required, and does not intend, to hold annual meetings of shareholders. Approval of shareholders will be sought, however, for certain changes in the operation of the Trust and for the election of the Board of Trustees of the Trust (each a “Trustee” and together, the “Board”) under certain circumstances. Under the Declaration of Trust, the Trustees have the power to liquidate the Fund without shareholder approval. While the Trustees have no present intention of exercising this power, they may do so if the Fund fails to reach a viable size within a reasonable amount of time or for such other reasons as may be determined by the Board.

In addition, a Trustee may be removed by the remaining Trustees or by shareholders at a special meeting called upon written request of shareholders owning at least 10% of the outstanding shares of the Trust. In the event that such a meeting is requested, the Trust will provide appropriate assistance and information to the shareholders requesting the meeting.

Any series of the Trust created on or after November 11, 1996 may reorganize or merge with one or more other series of the Trust or of another investment company. Any such reorganization or merger shall be pursuant to the terms and conditions specified in an agreement and plan of reorganization authorized and approved by the Trustees and entered into by the relevant series in connection therewith. In addition, such reorganization or merger may be authorized by vote of a majority of the Trustees then in office and, to the extent permitted by applicable law and the Declaration of Trust, without the approval of shareholders of any series.

## ADDITIONAL INFORMATION ABOUT INVESTMENT OBJECTIVE AND POLICIES

The Fund’s investment objective and principal investment strategies are described in the Prospectus. The Fund is classified as a “diversified” investment company under the Investment Company Act of 1940, as amended (the “1940 Act”). The following information supplements, and should be read in conjunction with, the Prospectus.

## DESCRIPTION OF PERMITTED INVESTMENTS

The following are descriptions of the permitted investments and investment practices of the Fund and the associated risk factors. The Fund may invest in any of the following instruments or engage in any of the following investment practices unless such investment or activity is inconsistent with or is not permitted by the Fund's stated investment policies, including those stated below.

**Equity Securities.** Equity securities represent ownership interests in a company or partnership and consist of common stocks, preferred stocks, warrants to acquire common stock, securities convertible into common stock, and investments in master limited partnerships ("MLPs"). Investments in equity securities in general are subject to market risks that may cause their prices to fluctuate over time. Fluctuations in the value of equity securities in which the Fund invests will cause the net asset value ("NAV") of the Fund to fluctuate. The Fund purchases equity securities traded in the United States on registered exchanges or the over-the-counter market. Equity securities are described in more detail below:

- **Common Stock.** Common stock represents an equity or ownership interest in an issuer. In the event an issuer is liquidated or declares bankruptcy, the claims of owners of bonds and preferred stock take precedence over the claims of those who own common stock.
- **Preferred Stock.** Preferred stock represents an equity or ownership interest in an issuer that pays dividends at a specified rate and that has precedence over common stock in the payment of dividends. In the event an issuer is liquidated or declares bankruptcy, the claims of owners of bonds take precedence over the claims of those who own preferred and common stock.
- **Royalty Trusts.** Royalty trusts are structured similarly to real estate investment trusts ("REITs"). A royalty trust generally acquires an interest in natural resource companies or chemical companies and distributes the income it receives to the investors of the royalty trust. A sustained decline in demand for crude oil, natural gas and refined petroleum products could adversely affect income and royalty trust revenues and cash flows. Factors that could lead to a decrease in market demand include a recession or other adverse economic conditions, an increase in the market price of the underlying commodity, higher taxes or other regulatory actions that increase costs, or a shift in consumer demand for such products. A rising interest rate environment could adversely impact the performance of royalty trusts. Rising interest rates could limit the capital appreciation of royalty trusts because of the increased availability of alternative investments at more competitive yields. Further, because natural resources are depleting assets, the income producing ability of a royalty trust may eventually be exhausted.
- **Exchange-Traded Funds.** An exchange-traded fund ("ETF") is a fund whose shares are bought and sold on a securities exchange as if it were a single security. An ETF holds a portfolio of securities designed to track a particular market segment or index. Some examples of ETFs are SPDRs<sup>®</sup>, DIAMONDS<sup>SM</sup>, NASDAQ 100 Index Tracking Stock<sup>SM</sup> ("QQQs<sup>SM</sup>"), and iShares<sup>®</sup>. The Fund could purchase an ETF to temporarily gain exposure to a portion of the U.S. or foreign market while awaiting an opportunity to purchase securities directly. The risks of owning an ETF generally reflect the risks of owning the securities comprising the index which an index ETF is designed to track or the other holdings of an active or index ETF, although lack of liquidity in an ETF could result in it being more volatile than the tracked index or underlying holdings, and ETFs have management fees that increase their costs versus the costs of owning the underlying holdings directly. See also "Securities of Other Investment Companies" below.
- **Warrants.** Warrants are instruments that entitle the holder to buy an equity security at a specific price for a specific period of time. Changes in the value of a warrant do not necessarily correspond to changes in the value of its underlying security. The price of a warrant may be more volatile than the price of its underlying security, and a warrant may offer greater potential for capital appreciation as well as capital loss. Warrants do not entitle a holder to

dividends or voting rights with respect to the underlying security and do not represent any rights in the assets of the issuing company. A warrant ceases to have value if it is not exercised prior to its expiration date. These factors can make warrants more speculative than other types of investments.

- **Convertible Securities.** Convertible securities are bonds, debentures, notes, preferred stocks or other securities that may be converted or exchanged (by the holder or by the issuer) into shares of the underlying common stock (or cash or securities of equivalent value) at a stated exchange ratio. A convertible security may also be called for redemption or conversion by the issuer after a particular date and under certain circumstances (including a specified price) established upon issue. If a convertible security held by the Fund is called for redemption or conversion, the Fund could be required to tender it for redemption, convert it into the underlying common stock, or sell it to a third party.

Convertible securities generally have less potential for gain or loss than common stocks. Convertible securities generally provide yields higher than the underlying common stocks, but generally lower than comparable non-convertible securities. Because of this higher yield, convertible securities generally sell at a price above their “conversion value,” which is the current market value of the stock to be received upon conversion. The difference between this conversion value and the price of convertible securities will vary over time depending on changes in the value of the underlying common stocks and interest rates. When the underlying common stocks decline in value, convertible securities will tend not to decline to the same extent because of the interest or dividend payments and the repayment of principal at maturity for certain types of convertible securities. However, securities that are convertible other than at the option of the holder generally do not limit the potential for loss to the same extent as securities convertible at the option of the holder. When the underlying common stocks rise in value, the value of convertible securities may also be expected to increase. At the same time, however, the difference between the market value of convertible securities and their conversion value will narrow, which means that the value of convertible securities will generally not increase to the same extent as the value of the underlying common stocks. Because convertible securities may also be interest-rate sensitive, their value may increase as interest rates fall and decrease as interest rates rise. Convertible securities are also subject to credit risk, and are often lower-quality securities.

- **Micro, Small and Medium Capitalization Issuers.** Investing in equity securities of micro, small and medium capitalization companies often involves greater risk than is customarily associated with investments in larger capitalization companies. This increased risk may be due to the greater business risks of smaller size, limited markets and financial resources, narrow product lines and frequent lack of depth of management. The securities of micro and smaller companies are often traded in the over-the-counter market and even if listed on a national securities exchange may not be traded in volumes typical for that exchange. Consequently, the securities of micro and smaller companies are less likely to be liquid, may have limited market stability, and may be subject to more abrupt or erratic market movements than securities of larger, more established growth companies or the market averages in general.

**Initial Public Offerings (“IPOs”).** The Fund may invest a portion of its assets in securities of companies offering shares in IPOs. IPOs may have a magnified performance impact on a fund with a small asset base. The Fund may hold IPO shares for a very short period of time, which may increase the turnover of the Fund’s portfolio and may lead to increased expenses for the Fund, such as commissions and transaction costs. By selling IPO shares, the Fund may realize taxable gains it will subsequently distribute to shareholders. In addition, the market for IPO shares can be speculative and/or inactive for extended periods of time. The limited number of shares available for trading in some IPOs may make it more difficult for the Fund to buy or sell significant amounts of shares without an unfavorable impact on prevailing prices. Holders of IPO shares can be affected by substantial dilution in the value of their shares, by sales of additional shares and by concentration of control in existing management and principal shareholders.

The Fund's investment in IPO shares may include the securities of unseasoned companies (companies with less than three years of continuous operations), which presents risks considerably greater than common stocks of more established companies. These companies may have limited operating histories and their prospects for profitability may be uncertain. These companies may be involved in new and evolving businesses and may be vulnerable to competition and changes in technology, markets and economic conditions. They may be more dependent on key managers and third parties and may have limited product lines.

**Master Limited Partnerships.** MLPs are limited partnerships or limited liability companies, whose partnership units or limited liability interests are listed and traded on a U.S. securities exchange, and are treated as publicly traded partnerships for federal income tax purposes. To qualify to be treated as a partnership for tax purposes, an MLP must receive at least 90% of its income from qualifying sources as set forth in Section 7704(d) of the Internal Revenue Code of 1986, as amended (the "Code"). These qualifying sources include activities such as the exploration, development, mining, production, processing, refining, transportation, storage and marketing of mineral or natural resources. To the extent that an MLP's interests are concentrated in a particular industry or sector, such as the energy sector, the MLP will be negatively impacted by economic events adversely impacting that industry or sector. MLPs that are formed as limited partnerships generally have two classes of owners, the general partner and limited partners, while MLPs that are formed as limited liability companies generally have two analogous classes of owners, the managing member and the members. For purposes of this section, references to general partners also apply to managing members and references to limited partners also apply to members.

The general partner is typically owned by a major energy company, an investment fund, the direct management of the MLP or is an entity owned by one or more of such parties. The general partner may be structured as a private or publicly traded corporation or other entity. The general partner typically controls the operations and management of the MLP through an equity interest of as much as 2% in the MLP plus, in many cases, ownership of common units and subordinated units. A holder of general partner interests can be liable under certain circumstances for amounts greater than the amount of the holder's investment in the general partner interest. General partner interests are not publicly traded and generally cannot be converted into common units. The general partner interest can be redeemed by the MLP if the MLP unitholders choose to remove the general partner, typically with a supermajority vote by limited partner unitholders.

Limited partners own the remainder of the MLP through ownership of common units and have a limited role in the MLP's operations and management. Common units are listed and traded on U.S. securities exchanges, with their value fluctuating predominantly based on prevailing market conditions and the success of the MLP. Unlike owners of common stock of a corporation, owners of common units have limited voting rights and have no ability annually to elect directors. In the event of liquidation, common units have preference over subordinated units, but not over debt or preferred units, to the remaining assets of the MLP.

MLPs are typically structured such that common units and general partner interests have first priority to receive quarterly cash distributions up to an established minimum amount ("minimum quarterly distributions" or "MQD"). Common and general partner interests also accrue arrearages in distributions to the extent the MQD is not paid. Once common and general partner interests have been paid, subordinated units receive distributions of up to the MQD; however, subordinated units do not accrue arrearages. Distributable cash in excess of the MQD paid to both common and subordinated units is distributed to both common and subordinated units generally on a pro rata basis. The general partner is also eligible to receive incentive distributions if the general partner operates the business in a manner which results in distributions paid per common unit surpassing specified target levels. As the general partner increases cash distributions to the limited partners, the general partner receives an increasingly higher percentage of the incremental cash distributions. A common arrangement provides that the general partner can reach a tier where it receives 50% of every

incremental dollar paid to common and subordinated unit holders. These incentive distributions encourage the general partner to streamline costs, increase capital expenditures and acquire assets in order to increase the partnership's cash flow and raise the quarterly cash distribution in order to reach higher tiers. Such results benefit all security holders of the MLP.

**MLP I-Shares.** Issuers of MLP I-Shares use the proceeds from the sale of MLP I-Shares to purchase limited partnership interests in the MLP in the form of MLP i-units. Thus, MLP I-Shares represent an indirect interest in an MLP limited partnership interest. MLP i-units have similar features as MLP common units in terms of voting rights, liquidation preference and distribution. MLP I-Shares themselves have limited voting rights and are similar in that respect to MLP common units. MLP I-Shares differ from MLP common units in a number of respects, including that instead of receiving cash distributions, holders of MLP I-Shares will typically receive distributions of additional MLP I-Shares with a value equal to the cash distributions received by common unit holders. MLP I-Shares are traded on securities exchanges. As discussed further below in the "Taxes" section, the Fund's investment in one or more MLPs that are treated as qualified publicly traded partnerships is limited under the "Asset Test" to no more than 25% of the value of the Fund's assets. However, because certain issuers of MLP I-Shares are treated as corporations and not partnerships for U.S. federal income tax purposes, the Fund's investment in such MLP I-Shares is generally not counted for purposes of this 25% limitation. Unlike an interest in an MLP taxed as a partnership, returns from investments in MLP I-Shares issued by entities taxed as corporations for U.S. federal income tax purposes would be affected by a corporate level tax imposed at the entity level.

**Fixed Income Securities.** Fixed income securities include bonds, notes, debentures and other interest-bearing securities that represent indebtedness. The market value of the fixed income investments in which the Fund invests will change in response to interest rate changes and other factors. During periods of falling interest rates, the values of outstanding fixed income securities generally rise. Conversely, during periods of rising interest rates, the values of such securities generally decline. Moreover, while securities with longer maturities tend to produce higher yields, the prices of longer maturity securities are also subject to greater market fluctuations as a result of changes in interest rates. Changes by recognized agencies in the rating of any fixed income security and in the ability of an issuer to make payments of interest and principal also affect the value of these investments. Changes in the value of these securities will not necessarily affect cash income derived from these securities but will affect the Fund's NAV.

**Zero Coupon Bonds.** These securities are sold at a (usually substantial) discount and redeemed at face value at their maturity date without interim cash payments of interest or principal. When held to maturity, their entire income, which consists of accretion of discount, comes from the difference between the issue price and their value at maturity. The amount of the discount rate varies depending on factors including the time remaining until maturity, prevailing interest rates, the security's liquidity and the issuer's credit quality. The market prices of zero coupon securities are generally more volatile than the market prices of securities that have similar maturity but that pay interest periodically. Zero coupon securities are likely to respond to a greater degree to interest rate changes than are non-zero coupon securities with similar maturity and credit qualities. The Fund's investments in pay-in-kind, delayed and zero coupon bonds may require it to sell certain of its securities to generate sufficient cash to satisfy certain income distribution requirements.

These securities may include treasury securities, such as Separate Trading of Registered Interest and Principal of Securities ("STRIPS"), that have had their interest payments ("coupons") separated from the underlying principal ("corpus") by their holder, typically a custodian bank or investment brokerage firm. Once the holder of the security has stripped or separated corpus and coupons, it may sell each component separately. The principal or corpus is then sold at a deep discount because the buyer receives only the right to receive a future fixed payment on the security and does not receive any rights to periodic interest (cash) payments. Typically, the coupons are sold separately or grouped with other coupons with like maturity dates and sold bundled in such form. The underlying treasury security is held in book-entry form at the Federal Reserve Bank or, in the case of bearer securities (i.e., unregistered securities which are owned

ostensibly by the bearer or holder thereof), in trust on behalf of the owners thereof. Purchasers of stripped obligations acquire, in effect, discount obligations that are economically identical to the zero coupon securities that the U.S. Treasury sells itself.

**Mortgage-Backed Securities.** Yield characteristics of mortgage-backed securities differ from those of traditional debt securities in a variety of ways. The most significant differences of mortgage-backed securities are: 1) payments of interest and principal are more frequent (usually monthly) and 2) falling interest rates generally cause individual borrowers to pay off their mortgage earlier than expected, which results in prepayments of principal on the securities, thus forcing the Fund to reinvest the money at a lower interest rate. In addition to risks associated with changes in interest rates described in “Factors Affecting the Value of Debt Securities,” a variety of economic, geographic, social and other factors, such as the sale of the underlying property, refinancing or foreclosure, can cause investors to repay the loans underlying a mortgage-backed security sooner than expected. When prepayment occurs, the Fund may have to reinvest its principal at a rate of interest that is lower than the rate on existing mortgage-backed securities.

**Asset-Backed Securities.** These securities are interests in pools of a broad range of assets other than mortgages, such as automobile loans, computer leases and credit card receivables. Like mortgage-backed securities, these securities are pass-through. In general, the collateral supporting these securities is of shorter maturity than mortgage loans and is less likely to experience substantial prepayments with interest rate fluctuations, but may still be subject to prepayment risk.

Asset-backed securities present certain risks that are not presented by mortgage-backed securities. Primarily, these securities may not have the benefit of any security interest in the related assets, which raises the possibility that recoveries on repossessed collateral may not be available to support payments on these securities. For example, credit card receivables are generally unsecured and the debtors are entitled to the protection of a number of state and federal consumer credit laws, many of which allow debtors to reduce their balances by offsetting certain amounts owed on the credit cards. Most issuers of asset-backed securities backed by automobile receivables permit the servicers of such receivables to retain possession of the underlying obligations. If the servicer were to sell these obligations to another party, there is a risk that the purchaser would acquire an interest superior to that of the holders of the related asset-backed securities. Due to the quantity of vehicles involved and requirements under state laws, asset-backed securities backed by automobile receivables may not have a proper security interest in all of the obligations backing such receivables.

To lessen the effect of failures by obligors on underlying assets to make payments, the entity administering the pool of assets may agree to ensure the receipt of payments on the underlying pool occurs in a timely fashion (“liquidity protection”). In addition, asset-backed securities may obtain insurance, such as guarantees, policies or letters of credit obtained by the issuer or sponsor from third parties, for some or all of the assets in the pool (“credit support”). Delinquency or loss more than that anticipated or failure of the credit support could adversely affect the return on an investment in such a security.

The Fund may also invest in residual interests in asset-backed securities, which consist of the excess cash flow remaining after making required payments on the securities and paying related administrative expenses. The amount of residual cash flow resulting from a particular issue of asset-backed securities depends in part on the characteristics of the underlying assets, the coupon rates on the securities, prevailing interest rates, the amount of administrative expenses and the actual prepayment experience on the underlying assets.

**Trust Preferred Securities.** The Fund may invest in trust preferred securities, which are hybrid instruments issued by a special purpose trust (“Special Trust”), the entire equity interest of which is owned by a single issuer. The proceeds of the issuance to the Fund of trust preferred securities are typically used to purchase a junior subordinated debenture, and

distributions from the Special Trust are funded by the payments of principal and interest on the subordinated debenture.

If payments on the underlying junior subordinated debentures held by the Special Trust are deferred by the debenture issuer, the debentures would be treated as original issue discount (“OID”) obligations for the remainder of their term. As a result, holders of trust preferred securities, such as the Fund, would be required to accrue daily for federal income tax purposes their share of the stated interest and the de minimis OID on the debentures (regardless of whether the Fund receives any cash distributions from the Special Trust), and the value of trust preferred securities would likely be negatively affected. Interest payments on the underlying junior subordinated debentures typically may only be deferred if dividends are suspended on both common and preferred stock of the issuer. The underlying junior subordinated debentures generally rank slightly higher in terms of payment priority than both common and preferred securities of the issuer, but rank below other subordinated debentures and debt securities. Trust preferred securities may be subject to mandatory prepayment under certain circumstances. The market values of trust preferred securities may be more volatile than those of conventional debt securities. Trust preferred securities may be issued in reliance on Rule 144A under the 1933 Act, and, unless and until registered, are restricted securities. There can be no assurance as to the liquidity of trust preferred securities and the ability of holders of trust preferred securities, such as the Fund, to sell their holdings.

#### **Terms to Understand:**

**Maturity.** Every debt security has a stated maturity date when the issuer must repay the amount it borrowed (principal) from investors. Some debt securities, however, are callable, meaning the issuer can repay the principal earlier, on or after specified dates (call dates). Debt securities are most likely to be called when interest rates are falling because the issuer can refinance at a lower rate, similar to a homeowner refinancing a mortgage. The effective maturity of a debt security is usually its nearest call date.

A fund that invests in debt securities has no real maturity. Instead, it calculates its weighted average maturity. This number is an average of the effective or anticipated maturity of each debt security held by a fund, with the maturity of each security weighted by the percentage of the assets of the mutual fund it represents.

**Duration.** Duration is a calculation that seeks to measure the price sensitivity of a debt security, or the Fund that invests in debt securities, to changes in interest rates. It measures sensitivity more accurately than maturity because it takes into account the time value of cash flows generated over the life of a debt security. Future interest payments and principal payments are discounted to reflect their present value and then are multiplied by the number of years they will be received to produce a value expressed in years—the duration. Effective duration takes into account call features and sinking Fund prepayments that may shorten the life of a debt security.

An effective duration of four years, for example, would suggest that for each 1% reduction in interest rates at all maturity levels, the price of a security is estimated to increase by 4%. An increase in rates by the same magnitude is estimated to reduce the price of the security by 4%. By knowing the yield and the effective duration of a debt security, one can estimate total return based on an expectation of how much interest rates, in general, will change. While serving as a good estimator of prospective returns, effective duration is an imperfect measure.

**Factors Affecting The Value of Debt Securities.** The total return of a debt instrument is composed of two elements: the percentage change in the security’s price and interest income earned. The yield to maturity of a debt security estimates its total return only if the price of the debt security remains unchanged during the holding period and coupon interest is reinvested at the same yield to maturity. The total return of a debt instrument, therefore, will be determined not only by how much interest is earned, but also by how much the price of the security and interest rates change.

- **Interest Rates**

The price of a debt security generally moves in the opposite direction from interest rates (*i.e.*, if interest rates go up, the value of the bond will go down, and vice versa).

- **Prepayment Risk**

This risk affects mainly mortgage-backed securities. Unlike other debt securities, falling interest rates can adversely affect the value of mortgage-backed securities, which may cause your share price to fall. Lower rates motivate borrowers to pay off the instruments underlying mortgage-backed and asset-backed securities earlier than expected, resulting in prepayments on the securities. The Fund may then have to reinvest the proceeds from such prepayments at lower interest rates, which can reduce its yield. The unexpected timing of mortgage and asset-backed prepayments caused by the variations in interest rates may also shorten or lengthen the average maturity of the Fund. If left unattended, drifts in the average maturity of the Fund can have the unintended effect of increasing or reducing the effective duration of the Fund, which may adversely affect the expected performance of the Fund.

- **Extension Risk**

The other side of prepayment risk occurs when interest rates are rising. Rising interest rates can cause the Fund's average maturity to lengthen unexpectedly due to a drop in mortgage prepayments. This relationship would increase the sensitivity of the Fund to rising rates as well as the potential for price declines. Extending the average life of a mortgage-backed security increases the risk of depreciation due to future increases in market interest rates. For these reasons, mortgage-backed securities may be less effective than other types of U.S. government securities as a means of "locking in" interest rates.

- **Credit Rating**

Coupon interest is offered to investors of debt securities as compensation for assuming risk, although short-term treasury securities, such as three-month treasury bills, are considered "risk free." Corporate securities offer higher yields than treasury securities because their payment of interest and complete repayment of principal is less certain. The credit rating or financial condition of an issuer may affect the value of a debt security. Generally, the lower the quality rating of a security, the greater the risks that the issuer will fail to pay interest and return principal. To compensate investors for taking on increased risk, issuers with lower credit ratings usually offer their investors a higher "risk premium" in the form of higher interest rates than those available from comparable treasury securities.

Changes in investor confidence regarding the certainty of interest and principal payments of a corporate debt security will result in an adjustment to this "risk premium." Since an issuer's outstanding debt carries a fixed coupon, adjustments to the risk premium must occur in the price, which affects the yield to maturity of the bond. If an issuer defaults or becomes unable to honor its financial obligations, the bond may lose some or all of its value.

A security rated within the four highest rating categories by a rating agency is called investment-grade because its issuer is more likely to pay interest and repay principal than an issuer of a lower rated bond. Adverse economic conditions or changing circumstances, however, may weaken the capacity of the issuer to pay interest and repay principal. If a security is not rated or is rated under a different system, the Fund's investment managers may determine that it is of investment-

grade. The Fund's investment managers may retain securities that are downgraded, if they believe that keeping those securities is warranted.

Debt securities rated below investment-grade (junk bonds) are highly speculative securities that are usually issued by smaller, less credit-worthy and/or highly leveraged (indebted) companies. A corporation may issue a junk bond because of a corporate restructuring or other similar event. Compared with investment-grade bonds, junk bonds carry a greater degree of risk and are less likely to make payments of interest and principal. Market developments and the financial and business condition of the corporation issuing these securities influence their price and liquidity more than changes in interest rates, when compared to investment-grade debt securities. Insufficient liquidity in the junk bond market may make it more difficult to dispose of junk bonds and may cause the Fund to experience sudden and substantial price declines. A lack of reliable, objective data or market quotations may make it more difficult to value junk bonds accurately.

Rating agencies are organizations that assign ratings to securities based primarily on the rating agency's assessment of the issuer's financial strength. The Fund currently uses ratings compiled by Moody's Investor Services, Inc. ("Moody's"), Standard & Poor's Rating Services ("S&P") and Fitch Ratings. Credit ratings are only an agency's opinion, not an absolute standard of quality, and they do not reflect an evaluation of market risk.

The section "Appendix A – Description of Ratings" contains further information concerning the ratings of certain rating agencies and their significance.

The Fund's investment managers may use ratings produced by ratings agencies as guidelines to determine the rating of a security at the time the Fund buys it. A rating agency may change its credit ratings at any time. The Fund's investment managers monitor the rating of the security and will take such action, if any, they believe appropriate when they learn that a rating agency has reduced the security's rating. The Fund is not obligated to dispose of securities whose issuers subsequently are in default or which are downgraded below the above-stated ratings.

**Bank Loans.** Bank loans typically are arranged through private negotiations between a borrower and several financial institutions or a group of lenders which are represented by one or more lenders acting as agent. The agent is often a commercial bank that originates the loan and invites other parties to join the lending syndicate. The agent will be primarily responsible for negotiating the loan agreement and will have responsibility for the documentation and ongoing administration of the loan on behalf of the lenders after completion of the loan transaction. The Fund can invest in a bank loan either as a direct lender or through an assignment or participation.

When the Fund acts as a direct lender, it will have a direct contractual relationship with the borrower and may participate in structuring the loan, may enforce compliance by the borrower with the terms of the loan agreement and may have voting, consent and set-off rights under the loan agreement.

Loan assignments are investments in all or a portion of certain bank loans purchased from the lenders or from other third parties. The purchaser of an assignment typically will acquire direct rights against the borrower under the loan. While the purchaser of an assignment typically succeeds to all the rights and obligations of the assigning lender under the loan agreement, because assignments are arranged through private negotiations between potential assignees and assignors, or other third parties whose interests are being assigned, the rights and obligations acquired by the Fund may differ from and be more limited than those held by the assigning lender.

A holder of a loan participation typically has only a contractual right with the seller of the participation and not with the borrower or any other entities interpositioned between the seller of the participation and the borrower. As such, the

purchaser of a loan participation assumes the credit risk of the seller of the participation, and any intermediary entities between the seller and the borrower, in addition to the credit risk of the borrower. When the Fund holds a loan participation, it will have the right to receive payments of principal, interest and fees to which it may be entitled only from the seller of the participation and only upon receipt of the seller of such payments from the borrower or from any intermediary parties between the seller and the borrower. Additionally, the Fund generally will have no right to enforce compliance by the borrower with the terms of the loan agreement, will have no voting, consent or set-off rights under the loan agreement and may not directly benefit from the collateral supporting the loan although lenders that sell participations generally are required to distribute liquidation proceeds received by them pro rata among the holders of such participations. In the event of the bankruptcy or insolvency of the borrower, a loan participation may be subject to certain defenses that can be asserted by the borrower as a result of improper conduct by the seller or intermediary. If the borrower fails to pay principal and interest when due, the Fund may be subject to greater delays, expenses and risks than those that would have been involved if the Fund had purchased a direct obligation of such borrower.

Direct loans, assignments and loan participations may be considered liquid, as determined by the investment managers based on criteria approved by the Board.

The Fund may have difficulty disposing of bank loans because, in certain cases, the market for such instruments is not highly liquid. The lack of a highly liquid secondary market may have an adverse impact on the value of such instruments and on the Fund's ability to dispose of the bank loan in response to a specific economic event, such as deterioration in the creditworthiness of the borrower. Furthermore, transactions in many loans settle on a delayed basis, and the Fund may not receive the proceeds from the sale of a loan for a substantial period of time after the sale. As a result, those proceeds will not be available to make additional investments or to meet the Fund's redemption obligations. To the extent that extended settlement creates short-term liquidity needs, the Fund may satisfy these needs by holding additional cash or selling other investments (potentially at an inopportune time, which could result in losses to the Fund).

Bank loans may not be considered "securities," and purchasers, such as the Fund, therefore may not be entitled to rely on the anti-fraud protections of the federal securities laws.

The investment managers may from time to time have the opportunity to receive material, non-public information ("Confidential Information") about the borrower, including financial information and related documentation regarding the borrower that is not publicly available. Pursuant to applicable policies and procedures, the investment managers may (but are not required to) seek to avoid receipt of Confidential Information from the borrower so as to avoid possible restrictions on their ability to purchase and sell investments on behalf of the Fund and other clients to which such Confidential Information relates (e.g., publicly traded securities issued by the borrower). In such circumstances, the Fund (and other clients of the investment managers) may be disadvantaged in comparison to other investors, including with respect to the price the Fund pays or receives when it buys or sells a bank loan. Further, the investment managers' abilities to assess the desirability of proposed consents, waivers or amendments with respect to certain bank loans may be compromised if they are not privy to available Confidential Information. The investment managers may also determine to receive such Confidential Information in certain circumstances under their applicable policies and procedures. If the investment managers intentionally or unintentionally come into possession of Confidential Information, they may be unable, potentially for a substantial period of time, to purchase or sell publicly traded securities to which such Confidential Information relates.

**Foreign Securities.** Foreign securities include equity securities of foreign entities, obligations of foreign branches of U.S. banks and of foreign banks, including, without limitation, European Certificates of Deposit, European Time Deposits, European Bankers' Acceptances, Canadian Time Deposits, Europaper and Yankee Certificates of Deposit, and

investments in Canadian Commercial Paper and foreign securities. These instruments have investment risks that differ in some respects from those related to investments in obligations of U.S. domestic issuers. Such risks include future adverse political and economic developments, the possible imposition of withholding taxes on interest or other income, possible seizure, nationalization, or expropriation of foreign deposits, the possible establishment of exchange controls or taxation at the source, greater fluctuations in value due to changes in exchange rates, or the adoption of other foreign governmental restrictions which might adversely affect the payment of principal and interest on such obligations. Such investments may also entail higher custodial fees and sales commissions than domestic investments. Foreign issuers of securities or obligations are often subject to accounting treatment and engage in business practices different from those respecting domestic issuers of similar securities or obligations. Foreign branches of U.S. banks and foreign banks may be subject to less stringent reserve requirements than those applicable to domestic branches of U.S. banks.

In June 2016, the United Kingdom (the “UK”) voted in a referendum to leave the European Union (“EU”). Although the precise timeframe for “Brexit” is uncertain, the UK formally notified the European Council of its intention to withdraw from the EU by invoking article 50 of the Lisbon Treaty in March 2017, and this formal notification began a two-year period of negotiations regarding the terms of the UK’s exit from the EU. It is unclear how withdrawal negotiations will be conducted and what the potential consequences may be. In addition, it is possible that measures could be taken to revote on the issue of Brexit, or that portions of the UK could seek to separate and remain a part of the EU. As a result of the political divisions within the UK and between the UK and the EU that the referendum vote has highlighted and the uncertain consequences of a Brexit, the UK and European economies and the broader global economy could be significantly impacted, which may result in increased volatility and illiquidity, and potentially lower economic growth in markets in the UK, Europe and globally that could potentially have an adverse effect on the value of the Fund’s investments.

**Investments in Emerging Markets.** “Emerging markets” include countries in the MSCI Emerging Markets Index, and other countries that the Fund considers to be equivalent to those in that index based on their level of economic development or the size and experience of their securities markets. The Fund considers a company to be an emerging market company if (i) at least 50% of the company’s assets are located in emerging markets; (ii) at least 50% of the company’s revenues are generated in emerging markets; or (iii) the company is domiciled in an emerging market.

Investing in emerging markets involves additional risks and special considerations not typically associated with investing in other more established economies or markets. Such risks may include (i) increased risk of nationalization or expropriation of assets or confiscatory taxation; (ii) greater social, economic and political uncertainty, including war; (iii) higher dependence on exports and the corresponding importance of international trade; (iv) greater volatility, less liquidity and smaller capitalization of markets; (v) greater volatility in currency exchange rates; (vi) greater risk of inflation; (vii) greater controls on foreign investment and limitations on realization of investments, repatriation of invested capital and on the ability to exchange local currencies for U.S. dollars; (viii) increased likelihood of governmental involvement in and control over the economy; (ix) governmental decisions to cease support of economic reform programs or to impose centrally planned economies; (x) differences in auditing and financial reporting standards which may result in the unavailability of material information about issuers; (xi) less extensive regulation of the markets; (xii) longer settlement periods for transactions and less reliable clearance and custody arrangements; (xiii) less developed corporate laws regarding fiduciary duties of officers and directors and the protection of investors; (xiv) certain considerations regarding the maintenance of the Fund’s securities with local brokers and securities depositories and (xv) the imposition of withholding or other taxes on dividends, interest, capital gains, other income or gross sale or disposition proceeds.

Repatriation of investment income, assets and the proceeds of sales by foreign investors may require governmental registration and/or approval in some emerging market countries. The Fund could be adversely affected by delays in or a

refusal to grant any required governmental registration or approval for such repatriation or by withholding taxes imposed by emerging market countries on interest or dividends paid on securities held by the Fund or gains from the disposition of such securities.

In emerging markets, there is often less government supervision and regulation of business and industry practices, stock exchanges, over-the-counter markets, brokers, dealers, counterparties and issuers than in other more established markets. Any regulatory supervision that is in place may be subject to manipulation or control. Some emerging market countries do not have mature legal systems comparable to those of more developed countries. Moreover, the process of legal and regulatory reform may not be proceeding at the same pace as market developments, which could result in investment risk. Legislation to safeguard the rights of private ownership may not yet be in place in certain areas, and there may be the risk of conflict among local, regional and national requirements. In certain cases, the laws and regulations governing investments in securities may not exist or may be subject to inconsistent or arbitrary appreciation or interpretation. Both the independence of judicial systems and their immunity from economic, political or nationalistic influences remain largely untested in many countries. The Fund may also encounter difficulties in pursuing legal remedies or in obtaining and enforcing judgments in local courts.

**American Depositary Receipts.** American Depositary Receipts (“ADRs”), as well as other “hybrid” forms of ADRs, including European Depositary Receipts (“EDRs”) and Global Depositary Receipts (“GDRs”), are certificates evidencing ownership of shares of a foreign issuer. Depositary receipts are securities that evidence ownership interests in a security or a pool of securities that have been deposited with a “depository” and may be sponsored or unsponsored. These certificates are issued by depository banks and generally trade on an established market in the United States or elsewhere. The underlying shares are held in trust by a custodian bank or similar financial institution in the issuer’s home country. The depository bank may not have physical custody of the underlying securities at all times and may charge fees for various services, including forwarding dividends and interest and corporate actions. ADRs are alternatives to directly purchasing the underlying foreign securities in their national markets and currencies. However, ADRs continue to be subject to many of the risks associated with investing directly in foreign securities.

For ADRs, the depository is typically a U.S. financial institution and the underlying securities are issued by a foreign issuer. For other depositary receipts, the depository may be a foreign or a U.S. entity, and the underlying securities may have a foreign or a U.S. issuer. Depositary receipts will not necessarily be denominated in the same currency as their underlying securities. Generally, ADRs are issued in registered form, denominated in U.S. dollars, and designed for use in the U.S. securities markets. Other depositary receipts, such as GDRs and EDRs, may be issued in bearer form and denominated in other currencies, and are generally designed for use in securities markets outside the U.S. While the two types of depositary receipt facilities (unsponsored or sponsored) are similar, there are differences regarding a holder’s rights and obligations and the practices of market participants. A depository may establish an unsponsored facility without participation by (or acquiescence of) the underlying issuer; typically, however, the depository requests a letter of non-objection from the underlying issuer prior to establishing the facility. Holders of unsponsored depositary receipts generally bear all the costs of the facility. The depository usually charges fees upon deposit and withdrawal of the underlying securities, the conversion of dividends into U.S. dollars or other currency, the disposition of non-cash distributions, and the performance of other services. The depository of an unsponsored facility frequently is under no obligation to distribute shareholder communications received from the underlying issuer or to pass through voting rights to depositary receipt holders with respect to the underlying securities.

Sponsored depositary receipt facilities are created in generally the same manner as unsponsored facilities, except that sponsored depositary receipts are established jointly by a depository and the underlying issuer through a deposit agreement. The deposit agreement sets out the rights and responsibilities of the underlying issuer, the depository, and the

depository receipt holders. With sponsored facilities, the underlying issuer typically bears some of the costs of the depository receipts (such as dividend payment fees of the depository), although most sponsored depository receipts agree to distribute notices of shareholders meetings, voting instructions, and other shareholder communications and information to the depository receipt holders at the underlying issuer's request. The depository of an unsponsored facility frequently is under no obligation to distribute shareholder communications received from the issuer of the deposited security or to pass through, to the holders of the receipts, voting rights with respect to the deposited securities.

For purposes of the Fund's investment policies, investments in depository receipts will be deemed to be investments in the underlying securities. Thus, a depository receipt representing ownership of common stock will be treated as common stock. Depository receipts do not eliminate all of the risks associated with directly investing in the securities of foreign issuers.

Investments in the securities of foreign issuers may subject the Fund to investment risks that differ in some respects from those related to investments in securities of U.S. issuers. Such risks include future adverse political and economic developments, possible imposition of withholding taxes on income, possible seizure, nationalization or expropriation of foreign deposits, possible establishment of exchange controls or taxation at the source or greater fluctuation in value due to changes in exchange rates. Foreign issuers of securities often engage in business practices different from those of domestic issuers of similar securities, and there may be less information publicly available about foreign issuers. In addition, foreign issuers are, generally speaking, subject to less government supervision and regulation and different accounting treatment than are those in the United States.

**Sovereign Debt Obligations.** Sovereign debt obligations are issued or guaranteed by foreign governments or their agencies. Sovereign debt may be in the form of conventional securities or other types of debt instruments such as loans or loan participations. Governmental entities responsible for repayment of the debt may be unable or unwilling to repay principal and pay interest when due, and may require renegotiation or reschedule of debt payments. In addition, prospects for repayment of principal and payment of interest may depend on political as well as economic factors. Although some sovereign debt, such as Brady Bonds, is collateralized by U.S. government securities, repayment of principal and payment of interest is not guaranteed by the U.S. government.

**Municipal Securities.** Municipal securities, including municipal bonds and municipal notes, consist of: (i) debt obligations issued by or on behalf of public authorities to obtain funds to be used for various public facilities, for refunding outstanding obligations, for general operating expenses and for lending such funds to other public institutions and facilities, and (ii) certain private activity and industrial development bonds issued by or on behalf of public authorities to obtain funds to provide for the construction, equipment, repair or improvement of privately operated facilities.

Municipal bonds are debt obligations issued to obtain funds for various public purposes. Municipal bonds include general obligation bonds, revenue or special obligation bonds, private activity and industrial development bonds, moral obligation bonds and participation interests in municipal bonds. General obligation bonds are backed by the taxing power of the issuing municipality. Revenue or special obligation bonds are backed by the revenues of a project or facility, such as tolls from a toll bridge. Private activity or industrial development bonds are issued by or on behalf of public authorities to raise money to finance various privately-owned or -operated facilities for business and manufacturing, housing, sports and pollution control. These bonds are also used to finance public facilities such as airports, mass transit systems, ports, parking or sewage or solid waste disposal facilities and certain other facilities. The payment of the principal and interest on such bonds is dependent solely on the ability of the facility's user to meet its financial obligations and the pledge, if any, of real and personal property financed as security for such payment. Moral obligation bonds are normally issued by special purpose authorities. Moral obligation bonds are not backed by the full faith and credit of the issuing municipality,

but are generally backed by the agreement of the issuing authority to request appropriations from the municipality's legislative body. Certificates of participation represent an interest in an underlying obligation or commitment, such as an obligation issued in connection with a leasing arrangement.

Municipal notes consist of general obligation notes, tax anticipation notes (notes sold to finance working capital needs of the issuer in anticipation of receiving taxes on a future date), revenue anticipation notes (notes sold to provide needed cash prior to receipt of expected non-tax revenues from a specific source), bond anticipation notes, tax and revenue anticipation notes, certificates of indebtedness, demand notes and construction loan notes. The maturities of the instruments at the time of issue will generally range from three months to one year.

**Money Market Securities.** Money market securities include short-term U.S. government securities; custodial receipts evidencing separately traded interest and principal components of securities issued by the U.S. Treasury; commercial paper rated in the highest short-term rating category by a nationally recognized statistical ratings organization ("NRSRO"), such as S&P or Moody's, or determined by the investment managers to be of comparable quality at the time of purchase; short-term bank obligations (certificates of deposit, time deposits and bankers' acceptances) of U.S. commercial banks with assets of at least \$1 billion as of the end of their most recent fiscal year; and repurchase agreements involving such securities. Each of these money market securities are described below. For a description of ratings, see "Appendix A – Description of Ratings" to this SAI.

**Real Estate Investment Trusts.** A REIT is a corporation or business trust (that would otherwise be taxed as a corporation) which meets the definitional requirements of the Code. The Code permits a qualifying REIT to deduct from taxable income the dividends paid, thereby effectively eliminating corporate level federal income tax and making the REIT a pass-through vehicle for federal income tax purposes. To meet the definitional requirements of the Code, a REIT must, among other things: invest substantially all of its assets in interests in real estate (including mortgages and other REITs), cash and government securities; derive most of its income from rents from real property or interest on loans secured by mortgages on real property; and distribute annually 90% or more of its otherwise taxable income to shareholders.

REITs are sometimes informally characterized as Equity REITs and Mortgage REITs. An Equity REIT invests primarily in the fee ownership or leasehold ownership of land and buildings; a Mortgage REIT invests primarily in mortgages on real property, which may secure construction, development or long-term loans.

REITs may be affected by changes in underlying real estate values, which may have an exaggerated effect to the extent that REITs in which the Fund invests may concentrate investments in particular geographic regions or property types. Certain REITs have relatively small market capitalization, which may tend to increase the volatility of the market price of securities issued by such REITs. Additionally, rising interest rates may cause investors in REITs to demand a higher annual yield from future distributions, which may in turn decrease market prices for equity securities issued by REITs. Rising interest rates also generally increase the costs of obtaining financing, which could cause the value of the Fund's investments to decline. During periods of declining interest rates, certain Mortgage REITs may hold mortgages that the mortgagors elect to prepay, which prepayment may diminish the yield on securities issued by such Mortgage REITs. Equity and Mortgage REITs are also subject to heavy cash flow dependency defaults by borrowers and self-liquidation. In addition, Mortgage REITs may be affected by the ability of borrowers to repay when due the debt extended by the REIT and Equity REITs may be affected by the ability of tenants to pay rent. The above factors may adversely affect a borrower's or a lessee's ability to meet its obligations to the REIT. In the event of default by a borrower or lessee, the REIT may experience delays in enforcing its rights as a mortgagee or lessor and may incur substantial costs associated with protecting its investments.

Furthermore, REITs are dependent upon specialized management skills, have limited diversification and are, therefore, subject to risks inherent in operating and financing a limited number of projects. By investing in REITs indirectly through the Fund, a shareholder will bear not only his proportionate share of the expenses of the Fund, but also, indirectly, similar expenses of the REITs. REITs depend generally on their ability to generate cash flow to make distributions to shareholders. In addition, REITs could possibly fail to qualify for tax free pass-through of income under the Code or to maintain their exemptions from registration under the 1940 Act.

- **Real Estate Companies' Securities.** The Fund may be subject to the risks associated with the direct ownership of real estate. For example, real estate values may fluctuate as a result of general and local economic conditions, overbuilding and increased competition, increases in property taxes and operating expenses, demographic trends and variations in rental income, changes in zoning laws, casualty or condemnation losses, regulatory limitations on rents, changes in neighborhood values, related party risks, changes in how appealing properties are to tenants, changes in interest rates and other real estate capital market influences.

**U.S. Government Securities.** The Fund may invest in U.S. government securities. Securities issued or guaranteed by the U.S. government or its agencies or instrumentalities include U.S. Treasury securities, which are backed by the full faith and credit of the U.S. Treasury and which differ only in their interest rates, maturities, and times of issuance. U.S. Treasury bills have initial maturities of one-year or less; U.S. Treasury notes have initial maturities of one to ten years; and U.S. Treasury bonds generally have initial maturities of greater than ten years. U.S. Treasury notes and bonds typically pay coupon interest semi-annually and repay the principal at maturity. Certain U.S. government securities are issued or guaranteed by agencies or instrumentalities of the U.S. government including, but not limited to, obligations of U.S. government agencies or instrumentalities such as the Federal National Mortgage Association ("Fannie Mae"), the Government National Mortgage Association ("Ginnie Mae"), the Small Business Administration, the Federal Farm Credit Administration, the Federal Home Loan Banks, Banks for Cooperatives (including the Central Bank for Cooperatives), the Federal Land Banks, the Federal Intermediate Credit Banks, the Tennessee Valley Authority, the Export-Import Bank of the United States, the Commodity Credit Corporation, the Federal Financing Bank, the Student Loan Marketing Association, the National Credit Union Administration and the Federal Agricultural Mortgage Corporation ("Farmer Mac").

Some obligations issued or guaranteed by U.S. government agencies and instrumentalities, including, for example, Ginnie Mae pass-through certificates, are supported by the full faith and credit of the U.S. Treasury. Other obligations issued by or guaranteed by federal agencies, such as those securities issued by Fannie Mae, are supported by the discretionary authority of the U.S. government to purchase certain obligations of the federal agency. Additionally, some obligations are issued by or guaranteed by federal agencies, such as those of the Federal Home Loan Banks, which are supported by the right of the issuer to borrow from the U.S. Treasury. While the U.S. government provides financial support to such U.S. government-sponsored federal agencies, no assurance can be given that the U.S. government will always do so, since the U.S. government is not so obligated by law. Guarantees of principal by U.S. government agencies or instrumentalities may be a guarantee of payment at the maturity of the obligation so that in the event of a default prior to maturity there might not be a market and thus no means of realizing on the obligation prior to maturity. Guarantees as to the timely payment of principal and interest do not extend to the value or yield of these securities nor to the value of the Fund's shares.

On September 7, 2008, the U.S. Treasury announced a federal takeover of Fannie Mae and the Federal Home Loan Mortgage Corporation ("Freddie Mac"), placing the two federal instrumentalities in conservatorship. Under the takeover, the U.S. Treasury agreed to acquire \$1 billion of senior preferred stock of each instrumentality and obtained warrants for

the purchase of common stock of each instrumentality (the “Senior Preferred Stock Purchase Agreement” or “Agreement”). Under the Agreement, the U.S. Treasury pledged to provide up to \$200 billion per instrumentality as needed, including the contribution of cash capital to the instrumentalities in the event their liabilities exceed their assets. This was intended to ensure that the instrumentalities maintain a positive net worth and meet their financial obligations, preventing mandatory triggering of receivership. On December 24, 2009, the U.S. Treasury announced that it was amending the Agreement to allow the \$200 billion cap on the U.S. Treasury’s funding commitment to increase as necessary to accommodate any cumulative reduction in net worth through the end of 2012. The unlimited support the U.S. Treasury extended to the two companies expired at the beginning of 2013 – Fannie Mae’s support is now capped at \$125 billion and Freddie Mac has a limit of \$149 billion.

On August 17, 2012, the U.S. Treasury announced that it was again amending the Agreement to terminate the requirement that Fannie Mae and Freddie Mac each pay a 10% annual dividend. Instead, the companies will transfer to the U.S. Treasury on a quarterly basis all profits earned during a quarter that exceed a capital reserve amount of \$3 billion. It is believed that the new amendment puts Fannie Mae and Freddie Mac in a better position to service their debt because the companies no longer have to borrow from the U.S. Treasury to make fixed dividend payments. As part of the new terms, Fannie Mae and Freddie Mac also will be required to reduce their investment portfolios at an annual rate of 15% instead of the previous 10%, which puts each of them on track to cut their portfolios to a targeted \$250 billion in 2018.

Fannie Mae and Freddie Mac are the subject of several continuing class action lawsuits and investigations by federal regulators over certain accounting, disclosure or corporate governance matters, which (along with any resulting financial restatements) may adversely affect the guaranteeing entities. Importantly, the future of the entities is in serious question as the U.S. government reportedly is considering multiple options, ranging from nationalization, privatization, consolidation, or abolishment of the entities.

**U.S. Treasury Obligations.** U.S. Treasury obligations consist of direct obligations of the U.S. Treasury, including Treasury bills, notes and bonds, and separately traded interest and principal component parts of such obligations, including those transferable through the Federal book-entry system known as STRIPS. The STRIPS program lets investors hold and trade the individual interest and principal components of eligible Treasury notes and bonds as separate securities. Under the STRIPS program, the principal and interest components are separately issued by the U.S. Treasury at the request of depository financial institutions, which then trade the component parts separately.

**Commercial Paper.** Commercial paper is the term used to designate unsecured short-term promissory notes issued by corporations and other entities. Maturities on these issues vary from a few to 270 days.

**Obligations of Domestic Banks, Foreign Banks and Foreign Branches of U.S. Banks.** The Fund may invest in obligations issued by banks and other savings institutions. Investments in bank obligations include obligations of domestic branches of foreign banks and foreign branches of domestic banks. Such investments in domestic branches of foreign banks and foreign branches of domestic banks may involve risks that are different from investments in securities of domestic branches of U.S. banks. These risks may include future unfavorable political and economic developments, possible withholding taxes on interest income, seizure or nationalization of foreign deposits, currency controls, interest limitations, or other governmental restrictions which might affect the payment of principal or interest on the securities held by the Fund. Additionally, these institutions may be subject to less stringent reserve requirements and to different accounting, auditing, reporting and recordkeeping requirements than those applicable to domestic branches of U.S. banks. Bank obligations include the following:

- **Bankers’ Acceptances.** Bankers’ acceptances are bills of exchange or time drafts drawn on and accepted by a commercial bank. Corporations use bankers’ acceptances to finance the shipment and storage of goods and to furnish

dollar exchange. Maturities are generally six months or less.

- **Certificates of Deposit.** Certificates of deposit are interest-bearing instruments with a specific maturity. They are issued by banks and savings and loan institutions in exchange for the deposit of funds and normally can be traded in the secondary market prior to maturity. Certificates of deposit with penalties for early withdrawal will be considered illiquid.
- **Time Deposits.** Time deposits are non-negotiable receipts issued by a bank in exchange for the deposit of funds. Like a certificate of deposit, it earns a specified rate of interest over a definite period of time; however, it cannot be traded in the secondary market. Time deposits with a withdrawal penalty or that mature in more than seven days are considered to be illiquid securities.

**Repurchase Agreements.** The Fund may enter into repurchase agreements with financial institutions. A repurchase agreement is an agreement under which a fund acquires a fixed income security (generally a security issued by the U.S. government or an agency thereof, a banker's acceptance, or a certificate of deposit) from a commercial bank, broker, or dealer, and simultaneously agrees to resell such security to the seller at an agreed upon price and date (normally, the next business day). Because the security purchased constitutes collateral for the repurchase obligation, a repurchase agreement may be considered a loan that is collateralized by the security purchased. The acquisition of a repurchase agreement may be deemed to be an acquisition of the underlying securities as long as the obligation of the seller to repurchase the securities is collateralized fully. The Fund follows certain procedures designed to minimize the risks inherent in such agreements. These procedures include effecting repurchase transactions only with creditworthy financial institutions whose condition will be continually monitored by the investment managers. The repurchase agreements entered into by the Fund will provide that the underlying collateral at all times shall have a value at least equal to 102% of the resale price stated in the agreement and consist only of securities permissible under Section 101(47)(A)(i) of the Bankruptcy Code (the investment managers monitor compliance with this requirement). Under all repurchase agreements entered into by the Fund, the custodian or its agent must take possession of the underlying collateral. In the event of a default or bankruptcy by a selling financial institution, the Fund will seek to liquidate such collateral. However, the exercising of the Fund's right to liquidate such collateral could involve certain costs or delays and, to the extent that proceeds from any sale upon a default of the obligation to repurchase were less than the repurchase price, the Fund could suffer a loss. The Fund may enter into "tri-party" repurchase agreements. In "tri-party" repurchase agreements, an unaffiliated third party custodian maintains accounts to hold collateral for the Fund and its counterparties and, therefore, the Fund may be subject to the credit risk of those custodians.

It is the current policy of the Fund not to invest in repurchase agreements that do not mature within seven days if any such investment, together with any other illiquid assets held by the Fund, amounts to more than 15% of the Fund's total assets. The investments of the Fund in repurchase agreements, at times, may be substantial when, in the view of the investment managers, liquidity or other considerations so warrant.

**Reverse Repurchase Agreements.** Reverse repurchase agreements are transactions in which the Fund sells portfolio securities to financial institutions, such as banks and broker-dealers, and agrees to repurchase them at a mutually agreed-upon date and price that is higher than the original sale price. Reverse repurchase agreements are similar to a fully collateralized borrowing by the Fund. At the time the Fund enters into a reverse repurchase agreement, it will earmark on the books of the Fund or place in a segregated account cash or liquid securities having a value equal to the repurchase price (including accrued interest) and will subsequently monitor the account to ensure that such equivalent value is maintained.

Reverse repurchase agreements involve risks. Reverse repurchase agreements are a form of leverage, and the use of reverse repurchase agreements by the Fund may increase the Fund's volatility. Reverse repurchase agreements are also subject to the risk that the other party to the reverse repurchase agreement will be unable or unwilling to complete the transaction as scheduled, which may result in losses to the Fund. Reverse repurchase agreements also involve the risk that the market value of the securities sold by the Fund may decline below the price at which it is obligated to repurchase the securities. In addition, when the Fund invests the proceeds it receives in a reverse repurchase transaction, there is a risk that those investments may decline in value. In this circumstance, the Fund could be required to sell other investments in order to meet its obligations to repurchase the securities.

**Securities of Other Investment Companies.** The Fund may invest in shares of other investment companies, to the extent permitted by applicable law and subject to certain restrictions. These investment companies typically incur fees that are separate from those fees incurred directly by the Fund. The Fund's purchase of such investment company securities results in the layering of expenses, such that shareholders would indirectly bear a proportionate share of the operating expenses of such investment companies, including advisory fees, in addition to paying the Fund's expenses. Unless an exception is available, Section 12(d)(1)(A) of the 1940 Act prohibits a fund from (i) acquiring more than 3% of the voting shares of any one investment company, (ii) investing more than 5% of its total assets in any one investment company, and (iii) investing more than 10% of its total assets in all investment companies combined, including its ETF investments.

For hedging or other purposes, the Fund may invest in investment companies that seek to track the composition and/or performance of specific indexes or portions of specific indexes. Certain of these investment companies, known as ETFs, are traded on a securities exchange. (See "Exchange-Traded Funds" above). The market prices of index-based investments will fluctuate in accordance with changes in the underlying portfolio securities of the investment company and also due to supply and demand of the investment company's shares on the exchange upon which the shares are traded. Index-based investments may not replicate or otherwise match the composition or performance of their specified index due to transaction costs, among other things.

Pursuant to orders issued by the U.S. Securities and Exchange Commission (the "SEC") to each of certain iShares, Market Vectors, Vanguard, ProShares, PowerShares, Guggenheim (formerly, Claymore), Direxion, Wisdom Tree, Rydex, First Trust and SPDR ETFs and procedures approved by the Board, the Fund may invest in these ETFs in excess of the 3% limit described above, provided that the Fund otherwise complies with the conditions of the SEC order, as it may be amended, and any other applicable investment limitations. Neither these ETFs nor their investment advisers make any representations regarding the advisability of investing in the ETFs.

**Exchange-Traded Notes ("ETNs").** ETNs are generally notes representing debt of the issuer, usually a financial institution. ETNs combine both aspects of bonds and ETFs. An ETN's returns are based on the performance of one or more underlying assets, reference rates or indexes, minus fees and expenses. Similar to ETFs, ETNs are listed on an exchange and traded in the secondary market. However, unlike an ETF, an ETN can be held until the ETN's maturity, at which time the issuer will pay a return linked to the performance of the specific asset, index or rate ("reference instrument") to which the ETN is linked minus certain fees. Unlike regular bonds, ETNs do not make periodic interest payments, and principal is not protected. ETNs are not registered or regulated as investment companies under the 1940 Act.

The value of an ETN may be influenced by, among other things, time to maturity, level of supply and demand for the ETN, volatility and lack of liquidity in underlying markets, changes in the applicable interest rates, the performance of the reference instrument, changes in the issuer's credit rating and economic, legal, political or geographic events that affect the reference instrument. An ETN that is tied to a reference instrument may not replicate the performance of the reference

instrument. ETNs also incur certain expenses not incurred by their applicable reference instrument. Some ETNs that use leverage can, at times, be relatively illiquid and, thus, they may be difficult to purchase or sell at a fair price. Levered ETNs are subject to the same risk as other instruments that use leverage in any form. While leverage allows for greater potential return, the potential for loss is also greater. Finally, additional losses may be incurred if the investment loses value because, in addition to the money lost on the investment, the loan still needs to be repaid.

Because the return on the ETN is dependent on the issuer's ability or willingness to meet its obligations, the value of the ETN may change due to a change in the issuer's credit rating, despite no change in the underlying reference instrument. The market value of ETN shares may differ from the value of the reference instrument. This difference in price may be due to the fact that the supply and demand in the market for ETN shares at any point in time is not always identical to the supply and demand in the market for the assets underlying the reference instrument that the ETN seeks to track.

There may be restrictions on the Fund's right to redeem its investment in an ETN, which are generally meant to be held until maturity. The Fund's decision to sell its ETN holdings may be limited by the availability of a secondary market. The Fund could lose some or all of the amount invested in an ETN.

**Derivatives.** Derivatives are financial instruments whose value is based on an underlying asset (such as a stock or a bond), an underlying economic factor (such as an interest rate) or a market benchmark. Unless otherwise stated in the Prospectus, the Fund may use derivatives for a number of purposes including managing risk, gaining exposure to various markets in a cost-efficient manner, reducing transaction costs, remaining fully invested and speculating. The Fund may also invest in derivatives with the goal of protecting itself from broad fluctuations in market prices, interest rates or foreign currency exchange rates (a practice known as "hedging"). When hedging is successful, the Fund will have offset any depreciation in the value of its portfolio securities by the appreciation in the value of the derivative position. Although techniques other than the sale and purchase of derivatives could be used to control the exposure of the Fund to market fluctuations, the use of derivatives may be a more effective means of hedging this exposure. In the future, to the extent such use is consistent with the Fund's investment objective and is legally permissible, the Fund may use instruments and techniques that are not presently contemplated, but that may be subsequently developed.

There can be no assurance that a derivative strategy, if employed, will be successful. Because many derivatives have a leverage or borrowing component, adverse changes in the value or level of the underlying asset, reference rate or index can result in a loss substantially greater than the amount invested in the derivative itself. Certain derivatives have the potential for unlimited loss, regardless of the size of the initial investment. Accordingly, certain derivative transactions may be considered to constitute borrowing transactions for purposes of the 1940 Act. Such a derivative transaction will not be considered to constitute the issuance of a "senior security" by the Fund, and therefore such transaction will not be subject to the 300% asset coverage requirement otherwise applicable to borrowings by the Fund, if the Fund covers the transaction or segregates sufficient liquid assets (or such assets are "earmarked" on the Fund's books) in accordance with the requirements and interpretations of the SEC and its staff. The Fund may enter into agreements with broker-dealers that require the broker-dealers to accept physical settlement for certain types of derivatives instruments. If this occurs, the Fund would treat such derivative instruments as being cash settled for purposes of determining the Fund's coverage requirements.

Pursuant to rules adopted under the Commodity Exchange Act ("CEA") by the Commodity Futures Trading Commission ("CFTC"), the Fund must either operate within certain guidelines and restrictions with respect to the Fund's use of futures, options on such futures, commodity options and certain swaps, or the Adviser will be subject to registration with the CFTC as a "commodity pool operator" ("CPO").

Consistent with the CFTC's regulations, the Trust, on behalf of the Fund, has filed a notice of exclusion from the definition of the term CPO under the CEA pursuant to CFTC Rule 4.5 and, therefore, the Fund is not subject to registration or regulation as a CPO under the CEA. As a result, the Fund will be limited in its ability to use futures, options on such futures, commodity options and certain swaps. Complying with the limitations may restrict the investment managers' ability to implement the Fund's investment strategies and may adversely affect the Fund's performance.

### **Types of Derivatives:**

**Futures.** A futures contract is an agreement between two parties whereby one party agrees to sell and the other party agrees to buy a specified amount of a financial instrument at an agreed upon price and time. The financial instrument underlying the contract may be a stock, stock index, bond, bond index, interest rate, foreign exchange rate or other similar instrument. Agreeing to buy the underlying financial instrument is called buying a futures contract or taking a long position in the contract. Likewise, agreeing to sell the underlying financial instrument is called selling a futures contract or taking a short position in the contract.

Futures contracts are traded in the United States on commodity exchanges or boards of trade (known as "contract markets") approved for such trading and regulated by the CFTC. These contract markets standardize the terms, including the maturity date and underlying financial instrument, of all futures contracts.

Unlike other securities, the parties to a futures contract do not have to pay for or deliver the underlying financial instrument until some future date (the delivery date). Contract markets require both the purchaser and seller to deposit "initial margin" with a futures broker, known as a futures commission merchant or custodian bank, when they enter into the contract. Initial margin deposits are typically equal to a percentage of the contract's value. Initial margin is similar to a performance bond or good faith deposit on a contract and is returned to the depositing party upon termination of the futures contract if all contractual obligations have been satisfied. After they open a futures contract, the parties to the transaction must compare the purchase price of the contract to its daily market value. If the value of the futures contract changes in such a way that a party's position declines, that party must make additional "variation margin" payments so that the margin payment is adequate. On the other hand, the value of the contract may change in such a way that there is excess margin on deposit, possibly entitling the party that has a gain to receive all or a portion of this amount. This process is known as "marking to the market." Variation margin does not represent a borrowing or loan by a party but is instead a settlement between the party and the futures broker of the amount one party would owe the other if the futures contract terminated. In computing daily NAV, each party marks to market its open futures positions.

Although the terms of a futures contract call for the actual delivery of and payment for the underlying security, in many cases the parties may close the contract early by taking an opposite position in an identical contract. If the sale price upon closing out the contract is less than the original purchase price, the party closing out the contract will realize a loss. If the sale price upon closing out the contract is more than the original purchase price, the party closing out the contract will realize a gain. Conversely, if the purchase price upon closing out the contract is more than the original sale price, the party closing out the contract will realize a loss. If the purchase price upon closing out the contract is less than the original sale price, the party closing out the contract will realize a gain.

The Fund may incur commission expenses when it opens or closes a futures position.

**Options.** An option is a contract between two parties for the purchase and sale of a financial instrument for a specified price (known as the "strike price" or "exercise price") at any time during the option period. Unlike a futures contract, an

option grants a right (not an obligation) to buy or sell a financial instrument. Generally, a seller of an option can grant a buyer two kinds of rights: a “call” (the right to buy the security) or a “put” (the right to sell the security). Options have various types of underlying instruments, including specific securities, indices of securities prices, foreign currencies, interest rates and futures contracts. Options may be traded on an exchange (exchange-traded options) or may be customized agreements between the parties (over-the-counter or “OTC” options). Like futures, a financial intermediary, known as a clearing corporation, financially backs exchange-traded options. However, OTC options have no such intermediary and are subject to the risk that the counterparty will not fulfill its obligations under the contract. The principal factors affecting the market value of an option include supply and demand, interest rates, the current market value of the underlying instrument relative to the exercise price of the option, the volatility of the underlying instrument, and the time remaining until the option expires.

#### ▪ **Purchasing Put and Call Options**

When the Fund purchases a put option, it buys the right to sell the instrument underlying the option at a fixed strike price. In return for this right, the Fund pays the current market price for the option (known as the “option premium”). The Fund may purchase put options to offset or hedge against a decline in the market value of its securities (“protective puts”) or to benefit from a decline in the price of securities that it does not own. The Fund would ordinarily realize a gain if, during the option period, the value of the underlying securities decreased below the exercise price sufficiently to cover the premium and transaction costs. However, if the price of the underlying instrument does not fall enough to offset the cost of purchasing the option, a put buyer would lose the premium and related transaction costs.

Call options are similar to put options, except that the Fund obtains the right to purchase, rather than sell, the underlying instrument at the option’s strike price. The Fund would normally purchase call options in anticipation of an increase in the market value of securities it owns or wants to buy. The Fund would ordinarily realize a gain if, during the option period, the value of the underlying instrument exceeded the exercise price plus the premium paid and related transaction costs. Otherwise, the Fund would realize either no gain or a loss on the purchase of the call option.

The purchaser of an option may terminate its position by:

- Allowing it to expire and losing its entire premium;
- Exercising the option and either selling (in the case of a put option) or buying (in the case of a call option) the underlying instrument at the strike price; or
- Closing it out in the secondary market at its current price.

#### ▪ **Selling (Writing) Put and Call Options**

When the Fund writes a call option it assumes an obligation to sell specified securities to the holder of the option at a fixed strike price if the option is exercised at any time before the expiration date. Similarly, when the Fund writes a put option it assumes an obligation to purchase specified securities from the option holder at a fixed strike price if the option is exercised at any time before the expiration date. The Fund may terminate its position in an exchange-traded put option before exercise by buying an option identical to the one it has written. Similarly, the Fund may cancel an OTC option by entering into an offsetting transaction with the counterparty to the option.

The Fund could try to hedge against an increase in the value of securities it would like to acquire by writing a put option

on those securities. If security prices rise, the Fund would expect the put option to expire and the premium it received to offset the increase in the security's value. If security prices remain the same over time, the Fund would hope to profit by closing out the put option at a lower price. If security prices fall, the Fund may lose an amount of money equal to the difference between the value of the security and the premium it received. Writing covered put options may deprive the Fund of the opportunity to profit from a decrease in the market price of the securities it would like to acquire.

The characteristics of writing call options are similar to those of writing put options, except that call writers expect to profit if prices remain the same or fall. The Fund could try to hedge against a decline in the value of securities it already owns by writing a call option. If the price of that security falls as expected, the Fund would expect the option to expire and the premium it received to offset the decline of the security's value. However, the Fund must be prepared to deliver the underlying instrument in return for the strike price, which may deprive it of the opportunity to profit from an increase in the market price of the securities it holds.

The Fund is permitted to write only "covered" options. At the time of selling a call option, the Fund may cover the option by owning, among other things:

- The underlying security (or securities convertible into the underlying security without additional consideration), index, interest rate, foreign currency or futures contract;
- A call option on the same security or index with the same or lesser exercise price;
- A call option on the same security or index with a greater exercise price, provided that the Fund also segregates cash or liquid securities in an amount equal to the difference between the exercise prices;
- Cash or liquid securities equal to at least the market value of the optioned securities, interest rate, foreign currency or futures contract; or
- In the case of an index, the portfolio of securities that corresponds to the index.

At the time of selling a put option, the Fund may cover the option by, among other things:

- Entering into a short position in the underlying security;
  - Purchasing a put option on the same security, index, interest rate, foreign currency or futures contract with the same or greater exercise price;
  - Purchasing a put option on the same security, index, interest rate, foreign currency or futures contract with a lesser exercise price and segregating cash or liquid securities in an amount equal to the difference between the exercise prices; or
  - Maintaining the entire exercise price in liquid securities.
- **Options on Securities Indices**

Options on securities indices are similar to options on securities, except that the exercise of securities index options requires cash settlement payments and does not involve the actual purchase or sale of securities. In addition, securities

index options are designed to reflect price fluctuations in a group of securities or segment of the securities market rather than price fluctuations in a single security.

- **Options on Credit Default Swaps**

An option on a credit default swap (“CDS”) gives the holder the right to enter into a CDS at a specified future date and under specified terms in exchange for a purchase price or premium. The writer of the option bears the risk of any unfavorable move in the value of the CDS relative to the market value on the exercise date, while the purchaser may allow the option to expire unexercised.

- **Options on Futures**

An option on a futures contract provides the holder with the right to buy a futures contract (in the case of a call option) or sell a futures contract (in the case of a put option) at a fixed time and price. Upon exercise of the option by the holder, the contract market clearing house establishes a corresponding short position for the writer of the option (in the case of a call option) or a corresponding long position (in the case of a put option). If the option is exercised, the parties will be subject to the futures contracts. In addition, the writer of an option on a futures contract is subject to initial and variation margin requirements on the option position. Options on futures contracts are traded on the same contract market as the underlying futures contract.

The buyer or seller of an option on a futures contract may terminate the option early by purchasing or selling an option of the same series (i.e., the same exercise price and expiration date) as the option previously purchased or sold. The difference between the premiums paid and received represents the trader’s profit or loss on the transaction.

The Fund may purchase put and call options on futures contracts instead of selling or buying futures contracts. The Fund may buy a put option on a futures contract for the same reasons it would sell a futures contract. It also may purchase such a put option in order to hedge a long position in the underlying futures contract. The Fund may buy a call option on a futures contract for the same purpose as the actual purchase of a futures contract, such as in anticipation of favorable market conditions.

The Fund may write a call option on a futures contract to hedge against a decline in the prices of the instrument underlying the futures contracts. If the price of the futures contract at expiration were below the exercise price, the Fund would retain the option premium, which would offset, in part, any decline in the value of its portfolio securities.

The writing of a put option on a futures contract is similar to the purchase of the futures contracts, except that, if the market price declines, the Fund would pay more than the market price for the underlying instrument. The premium received on the sale of the put option, less any transaction costs, would reduce the net cost to the Fund.

- **Options on Foreign Currencies**

A put option on a foreign currency gives the purchaser of the option the right to sell a foreign currency at the exercise price until the option expires. A call option on a foreign currency gives the purchaser of the option the right to purchase the currency at the exercise price until the option expires. The Fund may purchase or write put and call options on foreign currencies for the purpose of hedging against changes in future currency exchange rates.

The Fund may use foreign currency options given the same circumstances under which it could use forward foreign

currency exchange contracts. For example, a decline in the U.S. dollar value of a foreign currency in which the Fund's securities are denominated would reduce the U.S. dollar value of the securities, even if their value in the foreign currency remained constant. In order to hedge against such a risk, the Fund may purchase a put option on the foreign currency. If the value of the currency then declined, the Fund could sell the currency for a fixed amount in U.S. dollars and thereby offset, at least partially, the negative effect on its securities that otherwise would have resulted. Conversely, if the Fund anticipates a rise in the U.S. dollar value of a currency in which securities to be acquired are denominated, the Fund may purchase call options on the currency in order to offset, at least partially, the effects of negative movements in exchange rates. If currency exchange rates do not move in the direction or to the extent anticipated, the Fund could sustain losses on transactions in foreign currency options.

#### ▪ **Combined Positions**

The Fund may purchase and write options in combination with each other, or in combination with futures or forward contracts or swap agreements, to adjust the risk and return characteristics of the overall position. For example, the Fund could construct a combined position whose risk and return characteristics are similar to selling a futures contract by purchasing a put option and writing a call option on the same underlying instrument. Alternatively, the Fund could write a call option at one strike price and buy a call option at a lower price to reduce the risk of the written call option in the event of a substantial price increase. Because combined options positions involve multiple trades, they result in higher transaction costs and may be more difficult to open and close out.

**Forward Foreign Currency Exchange Contracts.** A forward foreign currency contract involves an obligation to purchase or sell a specific amount of currency at a future date or date range at a specific price. In the case of a cancelable forward contract, the holder has the unilateral right to cancel the contract at maturity by paying a specified fee. Forward foreign currency exchange contracts differ from foreign currency futures contracts in certain respects. Unlike futures contracts, forward contracts:

- Do not have standard maturity dates or amounts (i.e., the parties to the contract may fix the maturity date and the amount);
- Are typically traded directly between currency traders (usually large commercial banks) and their customers in the inter-bank markets, as opposed to on exchanges regulated by the CFTC (note, however, that under new definitions adopted by the CFTC and SEC, many non-deliverable foreign currency forwards will be considered swaps for certain purposes, including determination of whether such instruments must be traded on exchanges and centrally cleared);
- Do not require an initial margin deposit; and
- May be closed by entering into a closing transaction with the currency trader who is a party to the original forward contract, as opposed to with a commodities exchange.

#### ▪ **Foreign Currency Hedging Strategies**

A "settlement hedge" or "transaction hedge" is designed to protect the Fund against an adverse change in foreign currency values between the date a security is purchased or sold and the date on which payment is made or received. Entering into a forward contract for the purchase or sale of the amount of foreign currency involved in an underlying security transaction for a fixed amount of U.S. dollars "locks in" the U.S. dollar price of the security. The Fund may also use forward

contracts to purchase or sell a foreign currency when it anticipates purchasing or selling securities denominated in foreign currency, even if it has not yet selected the specific investments.

The Fund may use forward contracts to hedge against a decline in the value of existing investments denominated in foreign currency. Such a hedge, sometimes referred to as a “position hedge,” would tend to offset both positive and negative currency fluctuations, but would not offset changes in security values caused by other factors. The Fund could also hedge the position by selling another currency expected to perform similarly to the currency in which the Fund’s investment is denominated. This type of hedge, sometimes referred to as a “proxy hedge,” could offer advantages in terms of cost, yield, or efficiency, but generally would not hedge currency exposure as effectively as a direct hedge into U.S. dollars. Proxy hedges may result in losses if the currency used to hedge does not perform similarly to the currency in which the hedged securities are denominated.

Transaction and position hedging do not eliminate fluctuations in the underlying prices of the securities that the Fund owns or intends to purchase or sell. They simply establish a rate of exchange that one can achieve at some future point in time. Additionally, these techniques tend to minimize the risk of loss due to a decline in the value of the hedged currency and to limit any potential gain that might result from the increase in value of such currency.

The Fund may enter into forward contracts to shift its investment exposure from one currency into another. Such transactions may call for the delivery of one foreign currency in exchange for another foreign currency, including currencies in which its securities are not then denominated. This may include shifting exposure from U.S. dollars to a foreign currency, or from one foreign currency to another foreign currency. This type of strategy, sometimes known as a “cross-hedge,” will tend to reduce or eliminate exposure to the currency that is sold, and increase exposure to the currency that is purchased. Cross-hedges may protect against losses resulting from a decline in the hedged currency but will cause the Fund to assume the risk of fluctuations in the value of the currency it purchases. Cross-hedging transactions also involve the risk of imperfect correlation between changes in the values of the currencies involved.

It is difficult to forecast with precision the market value of portfolio securities at the expiration or maturity of a forward or futures contract. Accordingly, the Fund may have to purchase additional foreign currency on the spot (cash) market if the market value of a security it is hedging is less than the amount of foreign currency it is obligated to deliver. Conversely, the Fund may have to sell on the spot market some of the foreign currency it received upon the sale of a security if the market value of such security exceeds the amount of foreign currency it is obligated to deliver.

**Equity-Linked Securities.** The Fund may invest in privately issued securities whose investment results are designed to correspond generally to the performance of a specified stock index or “basket” of securities, or sometimes a single stock (referred to as “equity-linked securities”). These securities are used for many of the same purposes as derivative instruments and share many of the same risks. Equity-linked securities may be considered illiquid and thus subject to the Fund’s restrictions on investments in illiquid securities.

**Swap Agreements.** A swap agreement is a financial instrument that typically involves the exchange of cash flows between two parties on specified dates (settlement dates), where the cash flows are based on agreed-upon prices, rates, indices, etc. The nominal amount on which the cash flows are calculated is called the notional amount. Swap agreements are individually negotiated and structured to include exposure to a variety of different types of investments or market factors, such as interest rates, foreign currency rates, mortgage securities, corporate borrowing rates, security prices or inflation rates.

Swap agreements may increase or decrease the overall volatility of the investments of the Fund and its share price. The

performance of swap agreements may be affected by a change in the specific interest rate, currency, or other factors that determine the amounts of payments due to and from the Fund. If a swap agreement calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if the counterparty's creditworthiness declined, the value of a swap agreement would be likely to decline, potentially resulting in losses.

Generally, swap agreements have a fixed maturity date that will be agreed upon by the parties. The agreement can be terminated before the maturity date under certain circumstances, such as default by one of the parties or insolvency, among others, and can be transferred by a party only with the prior written consent of the other party. The Fund may be able to eliminate its exposure under a swap agreement either by assignment or by other disposition, or by entering into an offsetting swap agreement with the same party or a similarly creditworthy party. If the counterparty is unable to meet its obligations under the contract, declares bankruptcy, defaults or becomes insolvent, the Fund may not be able to recover the money it expected to receive under the swap agreement. The Fund will not enter into any swap agreement unless the investment managers believe that the counterparty to the transaction is creditworthy.

A swap agreement can be a form of leverage, which can magnify the Fund's gains or losses. In order to reduce the risk associated with leveraging, the Fund may cover its current obligations under swap agreements according to guidelines established by the SEC. If the Fund enters into a swap agreement on a net basis, it will segregate assets with a daily value at least equal to the excess, if any, of the Fund's accrued obligations under the swap agreement over the accrued amount the Fund is entitled to receive under the agreement. If the Fund enters into a swap agreement on other than a net basis, it will segregate assets with a value equal to the full amount of the Fund's accrued obligations under the swap agreement.

- **Equity Swaps**

In a typical equity swap, one party agrees to pay another party the return on a stock, stock index or basket of stocks in return for a specified interest rate. By entering into an equity index swap, for example, the index receiver can gain exposure to stocks making up the index of securities without actually purchasing those stocks. Equity index swaps involve not only the risk associated with investment in the securities represented in the index, but also the risk that the performance of such securities, including dividends, will not exceed the return on the interest rate that the Fund will be committed to pay.

- **Total Return Swaps**

Total return swaps are contracts in which one party agrees to make payments of the total return from a reference instrument—which may be a single asset, a pool of assets or an index of assets—during a specified period, in return for payments equal to a fixed or floating rate of interest or the total return from another underlying reference instrument. The total return includes appreciation or depreciation on the underlying asset, plus any interest or dividend payments. Payments under the swap are based upon an agreed upon principal amount but, since the principal amount is not exchanged, it represents neither an asset nor a liability to either counterparty, and is referred to as notional. Total return swaps are marked to market daily using different sources, including quotations from counterparties, pricing services, brokers or market makers. The unrealized appreciation or depreciation related to the change in the valuation of the notional amount of the swap is combined with the amount due to the Fund at termination or settlement. The primary risks associated with total return swaps are credit risks (if the counterparty fails to meet its obligations) and market risk (if there is no liquid market for the swap or unfavorable changes occur to the underlying reference instrument).

- **Interest Rate Swaps**

Interest rate swaps are financial instruments that involve the exchange of one type of interest rate for another type of interest rate cash flow on specified dates in the future. Some of the different types of interest rate swaps are “fixed-for-floating rate swaps,” “termed basis swaps” and “index amortizing swaps.” Fixed-for-floating rate swaps involve the exchange of fixed interest rate cash flows for floating rate cash flows. Termed basis swaps entail cash flows to both parties based on floating interest rates, where the interest rate indices are different. Index amortizing swaps are typically fixed-for-floating rate swaps where the notional amount changes if certain conditions are met.

As with a traditional investment in a debt security, the Fund could lose money by investing in an interest rate swap if interest rates change adversely. For example, if the Fund enters into a swap where it agrees to exchange a floating rate of interest for a fixed rate of interest, the Fund may have to pay more money than it receives. Similarly, if the Fund enters into a swap where it agrees to exchange a fixed rate of interest for a floating rate of interest, the Fund may receive less money than it has agreed to pay.

- **Currency Swaps**

A currency swap is an agreement between two parties in which one party agrees to make interest rate payments in one currency and the other promises to make interest rate payments in another currency. The Fund may enter into a currency swap when it has one currency and desires a different currency. Typically, the interest rates that determine the currency swap payments are fixed, although occasionally one or both parties may pay a floating rate of interest. Unlike an interest rate swap, however, the principal amounts are exchanged at the beginning of the agreement and returned at the end of the agreement. Changes in foreign exchange rates and changes in interest rates, as described above, may negatively affect currency swaps.

- **Inflation Swaps**

Inflation swaps are fixed-maturity, over-the-counter derivatives where one party pays a fixed rate in exchange for payments tied to an inflation index, such as the Consumer Price Index. The fixed rate, which is set by the parties at the initiation of the swap, is often referred to as the “breakeven inflation” rate and generally represents the current difference between treasury yields and Treasury Inflation Protected Securities yields of similar maturities at the initiation of the swap agreement. Inflation swaps are typically designated as “zero coupon,” where all cash flows are exchanged at maturity. The value of an inflation swap is expected to fluctuate in response to changes in the relationship between nominal interest rates and the rate of inflation. An inflation swap can lose value if the realized rate of inflation over the life of the swap is less than the fixed market implied inflation rate (the breakeven inflation rate) the investor agreed to pay at the initiation of the swap.

- **Credit Default Swaps**

A credit default swap is an agreement between a “buyer” and a “seller” for credit protection. The credit default swap agreement may have as reference obligations one or more securities that are not then held by the Fund. The protection buyer is generally obligated to pay the protection seller an upfront payment and/or a periodic stream of payments over the term of the agreement until a credit event on a reference obligation has occurred. If no default occurs, the seller would keep the stream of payments and would have no payment obligations. If a credit event occurs, the seller generally must pay the buyer the full notional amount (the “par value”) of the swap. Investing in credit default swap indexes allows the Fund to manage credit risk or take a position on a basket of debt obligations more efficiently than transacting in single name credit default swaps.

- **Caps, Collars and Floors**

Caps and floors have an effect similar to buying or writing options. In a typical cap or floor agreement, one party agrees to make payments only under specified circumstances, usually in return for payment of a fee by the other party. For example, the buyer of an interest rate cap obtains the right to receive payments to the extent that a specified interest rate exceeds an agreed-upon level. The seller of an interest rate floor is obligated to make payments to the extent that a specified interest rate falls below an agreed-upon level. An interest rate collar combines elements of buying a cap and selling a floor.

**Risks of Derivatives:**

While transactions in derivatives may reduce certain risks, these transactions themselves entail certain other risks. For example, unanticipated changes in interest rates, securities prices or currency exchange rates may result in a poorer overall performance of the Fund than if it had not entered into any derivatives transactions. Derivatives may magnify the Fund's gains or losses, causing it to make or lose substantially more than it invested.

When used for hedging purposes, increases in the value of the securities the Fund holds or intends to acquire should offset any losses incurred with a derivative. Purchasing derivatives for purposes other than hedging could expose the Fund to greater risks.

Use of derivatives involves transaction costs, which may be significant, and may also increase the amount of taxable income to shareholders.

**Correlation of Prices.** The Fund's ability to hedge its securities through derivatives depends on the degree to which price movements in the underlying index or instrument correlate with price movements in the relevant securities. In the case of poor correlation, the price of the securities the Fund is hedging may not move in the same amount, or even in the same direction as the hedging instrument. The investment managers will try to minimize this risk by investing in only those contracts whose behavior they expect to correlate with the behavior of the portfolio securities they are trying to hedge. However, if the investment managers' prediction of interest and currency rates, market value, volatility or other economic factors is incorrect, the Fund may lose money, or may not make as much money as it expected.

Derivative prices can diverge from the prices of their underlying instruments, even if the characteristics of the underlying instruments are very similar to the derivative. Listed below are some of the factors that may cause such a divergence:

- Current and anticipated short-term interest rates, changes in volatility of the underlying instrument, and the time remaining until expiration of the contract;
- A difference between the derivatives and securities markets, including different levels of demand, how the instruments are traded, the imposition of daily price fluctuation limits or discontinued trading of an instrument; and
- Differences between the derivatives, such as different margin requirements, different liquidity of such markets and the participation of speculators in such markets.

Derivatives based upon a narrower index of securities, such as those of a particular industry group, may present greater risk than derivatives based on a broad market index. Since narrower indices are made up of a smaller number of securities, they are more susceptible to rapid and extreme price fluctuations because of changes in the value of those

securities.

While currency futures and options values are expected to correlate with exchange rates, they may not reflect other factors that affect the value of the investments of the Fund. A currency hedge, for example, should protect a yen-denominated security from a decline in the yen, but will not protect the Fund against a price decline resulting from deterioration in the issuer's creditworthiness. Because the value of the Fund's foreign-denominated investments changes in response to many factors other than exchange rates, it may not be possible to match the amount of currency options and futures to the value of the Fund's investments precisely over time.

**Lack of Liquidity.** Before a futures contract or option is exercised or expires, the Fund can terminate it only by entering into a closing purchase or sale transaction. Moreover, the Fund may close out a futures contract only on the exchange the contract was initially traded. Although the Fund intends to purchase options and futures only where there appears to be an active market, there is no guarantee that such a liquid market will exist. If there is no secondary market for the contract, or the market is illiquid, the Fund may not be able to close out its position. In an illiquid market, the Fund may:

- Have to sell securities to meet its daily margin requirements at a time when it is disadvantageous to do so;
- Have to purchase or sell the instrument underlying the contract;
- Not be able to hedge its investments; and/or
- Not be able to realize profits or limit its losses.

Derivatives may become illiquid (i.e., difficult to sell at a desired time and price) under a variety of market conditions. For example:

- An exchange may suspend or limit trading in a particular derivative instrument, an entire category of derivatives or all derivatives, which sometimes occurs because of increased market volatility;
- Unusual or unforeseen circumstances may interrupt normal operations of an exchange;
- The facilities of the exchange may not be adequate to handle current trading volume;
- Equipment failures, government intervention, insolvency of a brokerage firm or clearing house or other occurrences may disrupt normal trading activity; or
- Investors may lose interest in a particular derivative or category of derivatives.

**Management Risk.** Successful use of derivatives by the Fund is subject to the ability of the investment managers to forecast stock market and interest rate trends. If the investment managers incorrectly predict stock market and interest rate trends, the Fund may lose money by investing in derivatives. For example, if the Fund were to write a call option based on the investment managers' expectation that the price of the underlying security would fall, but the price were to rise instead, the Fund could be required to sell the security upon exercise at a price below the current market price. Similarly, if the Fund were to write a put option based on the investment managers' expectation that the price of the underlying security would rise, but the price were to fall instead, the Fund could be required to purchase the security upon exercise at

a price higher than the current market price.

**Pricing Risk.** At times, market conditions might make it hard to value some investments. For example, if the Fund has valued its securities too high, shareholders may end up paying too much for Fund shares when they buy into the Fund. If the Fund underestimates its price, shareholders may not receive the full market value for their Fund shares when they sell.

**Margin.** Because of the low margin deposits required upon the opening of a derivative position, such transactions involve an extremely high degree of leverage. Consequently, a relatively small price movement in a derivative may result in an immediate and substantial loss (as well as gain) to the Fund and it may lose more than it originally invested in the derivative.

If the price of a futures contract changes adversely, the Fund may have to sell securities at a time when it is disadvantageous to do so to meet its minimum daily margin requirement. The Fund may lose its margin deposits if a broker-dealer with whom it has an open futures contract or related option becomes insolvent or declares bankruptcy.

**Volatility and Leverage.** The Fund's use of derivatives may have a leveraging effect. Leverage generally magnifies the effect of any increase or decrease in value of an underlying asset and results in increased volatility, which means the Fund will have the potential for greater gains, as well as the potential for greater losses, than if the Fund does not use derivative instruments that have a leveraging effect. The prices of derivatives are volatile (i.e., they may change rapidly, substantially and unpredictably) and are influenced by a variety of factors, including:

- Actual and anticipated changes in interest rates;
- Fiscal and monetary policies; and
- National and international political events.

Most exchanges limit the amount by which the price of a derivative can change during a single trading day. Daily trading limits establish the maximum amount that the price of a derivative may vary from the settlement price of that derivative at the end of trading on the previous day. Once the price of a derivative reaches this value, the Fund may not trade that derivative at a price beyond that limit. The daily limit governs only price movements during a given day and does not limit potential gains or losses. Derivative prices have occasionally moved to the daily limit for several consecutive trading days, preventing prompt liquidation of the derivative.

**Government Regulation.** The regulation of derivatives markets in the U.S. is a rapidly changing area of law and is subject to modification by government and judicial action. In particular, the Dodd-Frank Wall Street Reform and Consumer Protection Act, signed into law in 2010, grants significant new authority to the SEC and the CFTC to impose comprehensive regulations on the over-the-counter and cleared derivatives markets. These regulations include, but are not limited to, mandatory clearing of certain derivatives and requirements relating to disclosure, margin and trade reporting. The new law and regulations may negatively impact the Fund by increasing transaction and/or regulatory compliance costs, limiting the availability of certain derivatives or otherwise adversely affecting the value or performance of the derivatives the Fund trades. In addition, the SEC proposed new derivatives rules in December 2015 that could limit the Fund's use of derivatives, and adversely impact the Fund's ability to achieve its investment objective. Other potentially adverse regulatory obligations can develop suddenly and without notice.

**Participation Notes and Participatory Notes ("P-Notes").** P-Notes are participation interest notes that are issued by

banks or broker-dealers and are designed to offer a return linked to a particular underlying equity, debt, currency or market. When purchasing a P-Note, the posting of margin is not required because the full cost of the P-Note (plus commission) is paid at the time of purchase. When the P-Note matures, the issuer will pay to, or receive from, the purchaser the difference between the nominal value of the underlying instrument at the time of purchase and that instrument's value at maturity. Investments in P-Notes involve the same risks associated with a direct investment in the underlying foreign companies of foreign securities markets that they seek to replicate.

In addition, there can be no assurance that the trading price of P-Notes will equal the underlying value of the foreign companies or foreign securities markets that they seek to replicate. The holder of a P-Note that is linked to a particular underlying security is entitled to receive any dividends paid in connection with an underlying security or instrument. However, the holder of a P-Note does not receive voting rights as it would if it directly owned the underlying security or instrument. P-Notes are generally traded over-the-counter. P-Notes constitute general unsecured contractual obligations of the banks or broker-dealers that issue them and the counterparty. There is also counterparty risk associated with these investments because the Fund is relying on the creditworthiness of such counterparty and has no rights under a P-Note against the issuer of the underlying security. In addition, the Fund will incur transaction costs as a result of investment in P-Notes.

**Restricted and Illiquid Securities.** The Fund may purchase illiquid securities, including securities that are not readily marketable and securities that are not registered ("restricted securities") under the Securities Act of 1933, as amended (the "1933 Act"), but which can be offered and sold to "qualified institutional buyers" under Rule 144A under the 1933 Act. Illiquid securities are securities that cannot be sold or disposed of in the ordinary course of business within seven business days at approximately the value at which they are being carried on the Fund's books. Because of their illiquid nature, illiquid securities must be priced at fair value as determined in good faith pursuant to procedures approved by the Board. Despite such good faith efforts to determine fair value prices, the Fund's illiquid securities are subject to the risk that the security's fair value price may differ from the actual price which the Fund may ultimately realize upon its sale or disposition. Difficulty in selling illiquid securities may result in a loss or may be costly to the Fund. The Fund will not hold more than 15% of its net assets in illiquid securities. If the percentage of the Fund's net assets held in illiquid securities exceeds 15% due to market activity, the Fund will take appropriate measures to reduce its holdings of illiquid securities. Illiquid securities may include a wide variety of investments, such as repurchase agreements maturing in more than seven days, OTC options contracts and certain other derivatives (including certain swap agreements), fixed time deposits that are not subject to prepayment or do not provide for withdrawal penalties upon prepayment (other than overnight deposits), participation interests in loans, commercial paper issued pursuant to Section 4(a)(2) of the 1933 Act, and restricted, privately placed securities that, under the federal securities laws, generally may be resold only to qualified institutional buyers. If a substantial market develops for a restricted security (or other illiquid investment) held by the Fund, it may be treated as a liquid security, in accordance with procedures and guidelines approved by the Board. Under the supervision of the Board, the investment managers determine the liquidity of the Fund's investments. In determining the liquidity of the Fund's investments, the investment managers may consider various factors, including (1) the frequency and volume of trades and quotations, (2) the number of dealers and prospective purchasers in the marketplace, (3) dealer undertakings to make a market, and (4) the nature of the security and the market in which it trades (including any demand, put or tender features, the mechanics and other requirements for transfer, any letters of credit or other credit enhancement features, any ratings, the number of holders, the method of soliciting offers, the time required to dispose of the security, and the ability to assign or offset the rights and obligations of the security).

**Short Sales.** As is consistent with the Fund's investment objective, the Fund may engage in short sales that are either "uncovered" or "against the box." A short sale is "against the box" if at all times during which the short position is open, the Fund owns at least an equal amount of the securities or securities convertible into, or exchangeable without further

consideration for, securities of the same issue as the securities that are sold short. A short sale against the box is a taxable transaction to the Fund with respect to the securities that are sold short.

Uncovered short sales are transactions under which the Fund sells a security it does not own. To complete such a transaction, the Fund must borrow the security to make delivery to the buyer. The Fund then is obligated to replace the security borrowed by purchasing the security at the market price at the time of the replacement. The price at such time may be more or less than the price at which the security was sold by the Fund. Until the security is replaced, the Fund is required to pay the lender amounts equal to any dividends or interest that accrue during the period of the loan. To borrow the security, the Fund also may be required to pay a premium, which would increase the cost of the security sold. The proceeds of the short sale will be retained by the broker, to the extent necessary to meet margin requirements, until the short position is closed out.

Until the Fund closes its short position or replaces the borrowed security, the Fund may: (a) segregate cash or liquid securities at such a level that the amount segregated plus the amount deposited with the broker as collateral will equal the current value of the security sold short or (b) otherwise cover the Fund's short position.

**Special Risks of Cyber Attacks.** As with any entity that conducts business through electronic means in the modern marketplace, the Fund, and its service providers, may be susceptible to operational and information security risks resulting from cyber attacks. Cyber attacks include, among other behaviors, stealing or corrupting data maintained online or digitally, denial of service attacks on websites, the unauthorized monitoring, release, misuse, loss, destruction or corruption of confidential information, unauthorized access to relevant systems, compromises to networks or devices that the Fund and its service providers use to service the Fund's operations, operational disruption or failures in the physical infrastructure or operating systems that support the Fund and its service providers, or various other forms of cyber security breaches. Cyber attacks affecting the Fund or the Adviser, the Fund's distributor, custodian, or any other of the Fund's intermediaries or service providers may adversely impact the Fund and its shareholders, potentially resulting in, among other things, financial losses or the inability of Fund shareholders to transact business. For instance, cyber attacks may interfere with the processing of shareholder transactions, impact the Fund's ability to calculate its NAV, cause the release of private shareholder information or confidential business information, impede trading, subject the Fund to regulatory fines or financial losses and/or cause reputational damage. The Fund may also incur additional costs for cyber security risk management purposes designed to mitigate or prevent the risk of cyber attacks. Such costs may be ongoing because threats of cyber attacks are constantly evolving as cyber attackers become more sophisticated and their techniques become more complex. Similar types of cyber security risks are also present for issuers of securities in which the Fund may invest, which could result in material adverse consequences for such issuers and may cause the Fund's investments in such companies to lose value. There can be no assurance that the Fund, the Fund's service providers, or the issuers of the securities in which the Fund invests will not suffer losses relating to cyber attacks or other information security breaches in the future.

## **INVESTMENT LIMITATIONS**

### **Fundamental Policies**

The following investment limitations are fundamental, which means that the Fund cannot change them without approval by the vote of a majority of the outstanding shares of the Fund. The phrase "majority of the outstanding shares" means the vote of (i) 67% or more of the Fund's shares present at a meeting, if more than 50% of the outstanding shares of the Fund are present or represented by proxy, or (ii) more than 50% of the Fund's outstanding shares, whichever is less.

The Fund may not:

1. Purchase securities of an issuer that would cause the Fund to fail to satisfy the diversification requirement for a diversified management company under the 1940 Act, the rules or regulations thereunder or any exemption therefrom, as such statute, rules or regulations may be amended or interpreted from time to time.
2. Concentrate investments in a particular industry or group of industries, as concentration is defined under the 1940 Act, the rules and regulations thereunder or any exemption therefrom, as such statute, rules or regulations may be amended or interpreted from time to time.
3. Borrow money or issue senior securities (as defined under the 1940 Act), except to the extent permitted under the 1940 Act, the rules and regulations thereunder or any exemption therefrom, as such statute, rules or regulations may be amended or interpreted from time to time.
4. Make loans, except to the extent permitted under the 1940 Act, the rules and regulations thereunder or any exemption therefrom, as such statute, rules or regulations may be amended or interpreted from time to time.
5. Purchase or sell commodities or real estate, except to the extent permitted under the 1940 Act, the rules and regulations thereunder or any exemption therefrom, as such statute, rules or regulations may be amended or interpreted from time to time.
6. Underwrite securities issued by other persons, except to the extent permitted under the 1940 Act, the rules and regulations thereunder or any exemption therefrom, as such statute, rules or regulations may be amended or interpreted from time to time.

### **Non-Fundamental Policies**

The following investment limitations are non-fundamental and may be changed by the Board without shareholder approval. In addition, the Fund's investment objective is a non-fundamental policy that may be changed by the Board without shareholder approval.

The Fund may not:

1. Purchase securities of any issuer (except securities of other investment companies, securities issued or guaranteed by the U.S. government, its agencies or instrumentalities and repurchase agreements involving such securities) if, as a result, more than 5% of the total assets of the Fund would be invested in the securities of such issuer; or acquire more than 10% of the outstanding voting securities of any one issuer. This restriction applies to 75% of the Fund's total assets.
2. Purchase any securities which would cause 25% or more of the net assets of the Fund to be invested in the securities of one or more issuers conducting their principal business activities in the same industry or group of industries, provided that this limitation does not apply to investments in obligations issued or guaranteed by the U.S. government, its agencies or instrumentalities and repurchase agreements involving such securities. For purposes of this limitation, (i) utility companies will be classified according to their services, for example, gas distribution, gas transmission, electric and telephone will each be considered a separate industry; and (ii) financial service companies will be classified according to the end users of their services, for example, automobile finance,

bank finance and diversified finance will each be considered a separate industry.

3. Borrow money from a bank in an amount exceeding 33 1/3% of the value of its total assets, provided that investment strategies that either obligate the Fund to purchase securities or require the Fund to cover a position by segregating assets or entering into an offsetting position shall not be subject to this limitation. Asset coverage of at least 300% is required for all borrowing, except where the Fund has borrowed money, from any source, for temporary purposes in an amount not exceeding 5% of its total assets.
4. Make loans if, as a result, more than 33 1/3% of its total assets would be lent to other parties, except that the Fund may: (i) purchase or hold debt instruments in accordance with its investment objective and policies; (ii) enter into repurchase agreements; and (iii) lend its securities.
5. Purchase or sell real estate, real estate limited partnership interests, physical commodities or commodities contracts except that the Fund may purchase (i) marketable securities issued by companies which own or invest in real estate (including REITs), commodities or commodities contracts; and (ii) commodities contracts relating to financial instruments, such as financial futures contracts and options on such contracts.
6. Hold illiquid securities in an amount exceeding, in the aggregate, 15% of the Fund's net assets.

In addition,

7. Under normal circumstances, the Fund will invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in convertible securities.

Except with respect to Fund policies concerning borrowing, if a percentage restriction is adhered to at the time of an investment, a later increase or decrease in percentage resulting from changes in values or assets will not constitute a violation of such restriction. With respect to the limitation on illiquid securities, in the event that a subsequent change in net assets or other circumstances causes the Fund to exceed its limitation, the Fund will take steps to bring the aggregate amount of illiquid instruments back within the limitations as soon as reasonably practicable. With respect to the limitation on borrowing, in the event that a subsequent change in net assets or other circumstances causes the Fund to exceed its limitation, the Fund will take steps to bring the aggregate amount of borrowing back within the limitation within three days thereafter (not including Sundays and holidays).

The following descriptions of certain provisions of the 1940 Act may assist investors in understanding the above policies and restrictions:

Diversification. Under the 1940 Act, a diversified investment management company, as to 75% of its total assets, may not purchase securities of any issuer (other than securities issued or guaranteed by the U.S. Government, its agents or instrumentalities or securities of other investment companies) if, as a result, more than 5% of its total assets would be invested in the securities of such issuer, or more than 10% of the issuer's outstanding voting securities would be held by the fund.

Concentration. The SEC has defined concentration as investing 25% or more of an investment company's total assets in an industry or group of industries, with certain exceptions.

Borrowing. The 1940 Act presently allows a fund to borrow from any bank in an amount up to 33 1/3% of its total assets

(including the amount borrowed) and to borrow for temporary purposes in an amount not exceeding 5% of the value of its total assets.

Senior Securities. Senior securities may include any obligation or instrument issued by a fund evidencing indebtedness. The 1940 Act generally prohibits funds from issuing senior securities, although it does not treat certain transactions as senior securities, such as certain borrowings, short sales, reverse repurchase agreements, firm commitment agreements and standby commitments, with appropriate earmarking or segregation of assets to cover such obligation.

Lending. Under the 1940 Act, a fund may only make loans if expressly permitted by its investment policies.

Underwriting. Under the 1940 Act, underwriting securities involves a fund purchasing securities directly from an issuer for the purpose of selling (distributing) them or participating in any such activity either directly or indirectly. Under the 1940 Act, a diversified fund may not make any commitment as underwriter, if immediately thereafter the amount of its outstanding underwriting commitments, plus the value of its investments in securities of issuers (other than investment companies) of which it owns more than 10% of the outstanding voting securities, exceeds 25% of the value of its total assets.

Real Estate. The 1940 Act does not directly restrict an investment company's ability to invest in real estate, but does require that every investment company have a fundamental investment policy governing such investments.

Commodities. The 1940 Act does not directly restrict an investment company's ability to invest in commodities, but does require that every investment company have a fundamental investment policy governing such investments.

## **THE ADVISER**

**General.** Westwood Management Corp., a New York corporation formed in 1983, located at 200 Crescent Court, Suite 1200, Dallas, Texas 75201, is a professional investment management firm registered with the SEC under the Investment Advisers Act of 1940, as amended (the "Advisers Act"). The Adviser is a wholly owned subsidiary of Westwood Holdings Group, Inc., an institutional asset management company. As of March 31, 2017, the Adviser had approximately \$17.4 billion in assets under management.

The Board supervises the Adviser and establishes policies that the Adviser must follow in its management activities.

**Advisory Agreement with the Trust.** The Trust and the Adviser have entered into an investment advisory agreement dated December 16, 2005 (the "Advisory Agreement") with respect to the Fund. Under the Advisory Agreement, the Adviser serves as the investment adviser and makes investment decisions for the Fund and continuously reviews, supervises and administers the investment program of the Fund, subject to the supervision of, and policies established by, the Trustees.

After the initial two-year term, the continuance of the Advisory Agreement must be specifically approved at least annually: (i) by the vote of the Trustees or by a vote of the majority of the outstanding voting securities of the Fund; and (ii) by the vote of a majority of the Trustees who are not parties to the Advisory Agreement or "interested persons" of any party thereto, cast in person at a meeting called for the purpose of voting on such approval. The Advisory Agreement will terminate automatically in the event of its assignment, and is terminable at any time without penalty by the Board or, with respect to the Fund, by a majority of the outstanding voting securities of the Fund or, by the Adviser, on not less than 30 days' nor more than 60 days' written notice to the Trust. As used in the Advisory Agreement, the terms "majority of the

outstanding voting securities,” “interested persons” and “assignment” have the same meaning as such terms in the 1940 Act.

In rendering investment advisory services, the Adviser may use the portfolio management, research and other resources of Westwood International Advisors Inc. (“Westwood International”), an affiliate of the Adviser. Westwood International is not registered with the SEC as an investment adviser under the Advisers Act. Westwood International has entered into a Memorandum of Understanding (“MOU”) with the Adviser pursuant to which Westwood International is considered a “participating affiliate” of the Adviser as that term is used in relief granted by the staff of the SEC allowing U.S. registered investment advisers to use portfolio management or research resources of advisory affiliates subject to the supervision of a registered adviser. Investment professionals from Westwood International may render portfolio management, research and other services to the Fund under the MOU and are subject to supervision by the Adviser. In addition, as a result of the Dodd-Frank Act the SEC staff’s view and position regarding “participating affiliates” may change in the future.

**Advisory Fees Paid to the Adviser.** For its services, the Adviser is entitled to a fee, which is calculated daily and paid monthly, at an annual rate of 0.75% of the average daily net assets of the Fund. The Adviser has contractually agreed to reduce its fees and reimburse expenses of the Institutional Shares of the Fund in order to keep net operating expenses (excluding interest, taxes, brokerage commissions, dividend and interest expenses on securities sold short, acquired fund fees and expenses, and extraordinary expenses (collectively, “excluded expenses”)) from exceeding 0.85% of the average daily net assets of the Fund. To maintain the expense limit, the Adviser may reduce a portion of its management fee and/or reimburse certain expenses of the Fund. This contractual arrangement shall continue in effect until February 28, 2019 and shall thereafter continue in effect until its termination by shareholders of the Fund. In addition, the Adviser may receive from the Fund the difference between the Fund’s total annual Fund operating expenses (not including excluded expenses) and the Fund’s expense cap to recoup all or a portion of its prior fee reductions or expense reimbursements made during the three-year period preceding the recoupment if at any point total annual Fund operating expenses (not including excluded expenses) are below the expense cap (i) at the time of the fee waiver and/or expense reimbursement and (ii) at the time of the recoupment.

Except as otherwise noted, for the fiscal years ended October 31, 2015 and 2016, the Fund paid the following in management fees to the Adviser:

Contractual Advisory Fees		Fees Waived by the Adviser <sup>1</sup>		Total Fees Paid (After Waivers) to Adviser <sup>1</sup>	
2015	2016	2015	2016	2015	2016
\$20,068 <sup>2</sup>	\$44,909	\$20,068 <sup>2</sup>	\$44,909	\$0 <sup>2</sup>	\$0

1 For the fiscal years ended October 31, 2015 and 2016, the Adviser additionally reimbursed fees of \$38,055 and \$52,570, respectively, for the Fund to maintain the stated expense cap under its contractual expense limitation agreement with the Fund. As of October 31, 2016, the amount of previously waived and reimbursed fees for which the Adviser may seek reimbursement was \$155,602 for the Fund.

2 Represents the period from May 1, 2015 (commencement of Fund operations) to October 31, 2015.

## THE PORTFOLIO MANAGERS

This section includes information about the Fund’s portfolio managers, including information about other accounts they manage, the dollar range of Fund shares they own and how they are compensated.

**Compensation.** The Adviser compensates the Fund’s portfolio managers for their management of the Fund. Each of the

Fund’s portfolio managers’ compensation consists of a base salary, a discretionary cash bonus, profit sharing, company stock incentive compensation and a full benefits package. Percentages for each component of compensation are variable. Base salary levels are maintained at levels that the compensation committee deems to be commensurate with similar companies in the asset management industry. In determining incentive compensation and annual merit-based salary increases, employees on the investment team are evaluated according to a combination of quantitative and qualitative factors. The discretionary cash bonus and restricted stock award are determined at year-end and they vary with the firm’s success, which is directly linked to the performance of the products they manage, including the Fund and other accounts. Lastly, other benefits such as health insurance, life insurance and short and long-term disability insurance packages, as well as a 401(k) plan with employer matching, are provided.

**Fund Shares Owned by the Portfolio Managers.** The following table shows the dollar amount range of each portfolio manager’s “beneficial ownership” of shares of the Fund as of the end of the most recently completed fiscal year. Dollar amount ranges disclosed are established by the SEC. “Beneficial ownership” is determined in accordance with Rule 16a-1(a)(2) under the Securities Exchange Act of 1934, as amended (the “1934 Act”).

Name	Dollar Range of Fund Shares <sup>1</sup>
David Clott, CFA	\$10,001 - \$50,000
Shawn Mato, CFA	\$1 - \$10,000

<sup>1</sup> Valuation date is October 31, 2016.

**Other Accounts.** In addition to the Fund, certain portfolio managers may also be responsible for the day-to-day management of certain other accounts, as indicated by the following table. None of these accounts are subject to a performance-based advisory fee. The information below is provided as of October 31, 2016.

Name	Registered Investment Companies		Other Pooled Investment Vehicles		Other Accounts	
	Number of Accounts	Total Assets <sup>1</sup> (in millions)	Number of Accounts	Total Assets <sup>1</sup> (in millions)	Number of Accounts	Total Assets <sup>1</sup> (in millions)
David Clott, CFA	0	\$0	5	\$213.24	6	\$1.23
Shawn Mato, CFA	0	\$0	5	\$213.24	8	\$0.93

<sup>1</sup> Represents the portion of assets for which the portfolio manager has responsibility in the accounts indicated. The accounts indicated may contain additional assets under the responsibility of other portfolio managers and therefore may be duplicated.

The Adviser also manages institutional separate accounts and is the sub-adviser to other mutual funds. The investment process is the same for similar accounts, including the Fund, and is driven by proprietary team-oriented, in-depth, fundamental research. The investment research team is organized by industry coverage and supports all of the accounts managed in each of the Adviser’s investment strategies. Each of the Adviser’s investment strategies is managed by a portfolio team. Weekly research meetings provide a forum where the Adviser’s investment professionals discuss current investment ideas within their assigned industries. Generally, the entire portfolio team, or a sub-set of the team, then debates the merits of recommendations, taking into account the prevailing market environment, the portfolio’s current composition, and the relative value of alternative investments. Investment decisions are made by majority agreement of the portfolio team.

**Conflicts of Interest.** The portfolio managers' management of "other accounts" may give rise to potential conflicts of interest in connection with their management of the Fund's investments, on the one hand, and the investments of the other accounts, on the other. The other accounts may have the same investment objective as the Fund. Therefore, a potential conflict of interest may arise as a result of the identical investment objectives, whereby the portfolio managers could favor one account over another. Another potential conflict could include the portfolio managers' knowledge about the size, timing and possible market impact of Fund trades, whereby a portfolio manager could use this information to the advantage of other accounts and to the disadvantage of the Fund. However, the Adviser has established policies and procedures to ensure that the purchase and sale of securities among all accounts it manages are fairly and equitably allocated. The Adviser's trade allocation policy is to aggregate client transactions, including the Fund's, where possible when it is believed that such aggregation may facilitate the Adviser's duty of best execution, as applicable. Client accounts for which orders are aggregated receive the average price of such transaction. Any transaction costs incurred in the transaction are shared pro rata based on each client's participation in the transaction. The Adviser generally allocates securities among client accounts according to each account's pre-determined participation in the transaction. The Adviser's policy prohibits any allocation of trades that would favor any proprietary accounts, affiliated accounts, or any particular client(s) or group of clients more over any other account(s). The Adviser prohibits late trading, frequent trading and/or market timing in the Fund and monitors trades daily to ensure this policy is not violated.

## THE ADMINISTRATOR

**General.** SEI Investments Global Funds Services (the "Administrator"), a Delaware statutory trust, has its principal business offices at One Freedom Valley Drive, Oaks, Pennsylvania 19456. SEI Investments Management Corporation ("SIMC"), a wholly-owned subsidiary of SEI Investments Company ("SEI Investments"), is the owner of all beneficial interest in the Administrator. SEI Investments and its subsidiaries and affiliates, including the Administrator, are leading providers of fund evaluation services, trust accounting systems, and brokerage and information services to financial institutions, institutional investors, and money managers. The Administrator and its affiliates also serve as administrator or sub-administrator to other mutual funds.

**Administration Agreement with the Trust.** The Trust and the Administrator have entered into an administration agreement dated November 14, 1991, as amended and restated November 12, 2002 (the "Administration Agreement"). Under the Administration Agreement, the Administrator provides the Trust with administrative services, including regulatory reporting and all necessary office space, equipment, personnel and facilities.

The Administration Agreement provides that the Administrator shall not be liable for any error of judgment or mistake of law or for any loss suffered by the Trust in connection with the matters to which the Administration Agreement relates, except a loss resulting from willful misfeasance, bad faith or gross negligence on the part of the Administrator in the performance of its duties or from reckless disregard by it of its duties and obligations thereunder.

**Administration Fees Paid to the Administrator.** For its services under the Administration Agreement, the Administrator is paid a fee, which varies based on the average daily net assets of the Fund, subject to certain minimums. For the fiscal years ended October 31, 2015 and 2016, the Fund paid the following amounts for these services:

Administration Fees Paid	
2015	2016
\$2,946 <sup>1</sup>	\$8,113

1 Represents the period from May 1, 2015 (commencement of Fund operations) to October 31, 2015.

## **THE DISTRIBUTOR**

The Trust and SEI Investments Distribution Co. (the “Distributor”), a wholly owned subsidiary of SEI Investments and an affiliate of the Administrator, are parties to a distribution agreement dated November 14, 1991, as amended and restated November 14, 2005 and as amended August 30, 2010 (the “Distribution Agreement”), whereby the Distributor acts as principal underwriter for the Trust’s shares. The principal business address of the Distributor is One Freedom Valley Drive, Oaks, Pennsylvania 19456.

The continuance of the Distribution Agreement must be specifically approved at least annually (i) by the vote of the Trustees or by a vote of the majority of the outstanding voting securities of the Trust and (ii) by the vote of a majority of the Trustees who are not “interested persons” of the Trust and have no direct or indirect financial interest in the operations of the Distribution Agreement or any related agreement, cast in person at a meeting called for the purpose of voting on such approval. The Distribution Agreement will terminate automatically in the event of its assignment (as such term is defined in the 1940 Act), and is terminable at any time without penalty by the Board or by a majority of the outstanding voting securities of the Trust, or by the Distributor, upon not more than 60 days’ written notice to the other party.

## **PAYMENTS TO FINANCIAL INTERMEDIARIES**

**Payments by the Fund.** The Fund may enter into agreements with financial intermediaries pursuant to which the Fund may pay financial intermediaries for non-distribution-related sub-transfer agency, administrative, sub-accounting, and other shareholder services. Payments made pursuant to such agreements are generally based on either (1) a percentage of the average daily net assets of Fund shareholders serviced by a financial intermediary, or (2) the number of Fund shareholders serviced by a financial intermediary.

**Payments by the Adviser.** The Adviser and/or its affiliates, in their discretion, may make payments from their own resources and not from Fund assets to affiliated or unaffiliated brokers, dealers, banks (including bank trust departments), trust companies, registered investment advisers, financial planners, retirement plan administrators, insurance companies, and any other institution having a service, administration, or any similar arrangement with the Fund, its service providers or their respective affiliates, as incentives to help market and promote the Fund and/or in recognition of their distribution, marketing, administrative services, and/or processing support.

These additional payments may be made to financial intermediaries that sell Fund shares or provide services to the Fund, the Distributor or shareholders of the Fund through the financial intermediary’s retail distribution channel and/or fund supermarkets. Payments may also be made through the financial intermediary’s retirement, qualified tuition, fee-based advisory, wrap fee bank trust, or insurance (e.g., individual or group annuity) programs. These payments may include, but are not limited to, placing the Fund in a financial intermediary’s retail distribution channel or on a preferred or recommended fund list; providing business or shareholder financial planning assistance; educating financial intermediary personnel about the Fund; providing access to sales and management representatives of the financial intermediary; promoting sales of Fund shares; providing marketing and educational support; maintaining share balances and/or for sub-accounting, administrative or shareholder transaction processing services. A financial intermediary may perform the services itself or may arrange with a third party to perform the services.

The Adviser and/or its affiliates may also make payments from their own resources to financial intermediaries for costs associated with the purchase of products or services used in connection with sales and marketing, participation in and/or

presentation at conferences or seminars, sales or training programs, client and investor entertainment and other sponsored events. The costs and expenses associated with these efforts may include travel, lodging, sponsorship at educational seminars and conferences, entertainment and meals to the extent permitted by law.

Revenue sharing payments may be negotiated based on a variety of factors, including the level of sales, the amount of Fund assets attributable to investments in the Fund by financial intermediaries' customers, a flat fee or other measures as determined from time to time by the Adviser and/or its affiliates. A significant purpose of these payments is to increase the sales of Fund shares, which in turn may benefit the Adviser through increased fees as Fund assets grow.

Investors should understand that some financial intermediaries may also charge their clients fees in connection with purchases of shares or the provision of shareholder services.

### **THE TRANSFER AGENT**

DST Systems, Inc., 333 W. 11th Street, Kansas City, Missouri 64105 (the "Transfer Agent"), serves as the Fund's transfer agent and dividend disbursing agent under a transfer agency agreement with the Trust.

### **THE CUSTODIAN**

U.S. Bank National Association, 800 Nicollett Mall, Minneapolis, Minnesota 55402-4302 (the "Custodian"), serves as the custodian of the Fund. The Custodian holds cash, securities and other assets of the Fund as required by the 1940 Act.

### **INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM**

Ernst & Young LLP, One Commerce Square, 2005 Market Street, Suite 700, Philadelphia, Pennsylvania 19103, serves as independent registered public accounting firm for the Fund. The financial statements and notes thereto incorporated by reference for the Fund have been audited by Ernst & Young LLP, as indicated in their report with respect thereto, and are incorporated by reference in reliance on the authority of their report as experts in accounting and auditing.

### **LEGAL COUNSEL**

Morgan, Lewis & Bockius LLP, 1701 Market Street, Philadelphia, Pennsylvania 19103-2921, serves as legal counsel to the Trust.

### **TRUSTEES AND OFFICERS OF THE TRUST**

**Board Responsibilities.** The management and affairs of the Trust and its series, including the Fund described in this SAI, are overseen by the Trustees. The Board has approved contracts, as described above, under which certain companies provide essential management services to the Trust.

Like most mutual funds, the day-to-day business of the Trust, including the management of risk, is performed by third party service providers, such as the Adviser, the Distributor and the Administrator. The Trustees are responsible for overseeing the Trust's service providers and, thus, have oversight responsibility with respect to risk management performed by those service providers. Risk management seeks to identify and address risks, i.e., events or circumstances that could have material adverse effects on the business, operations, shareholder services, investment performance or reputation of the funds. The funds and their service providers employ a variety of processes, procedures and controls to identify various possible events or circumstances, to lessen the probability of their occurrence and/or to mitigate the

effects of such events or circumstances if they do occur. Each service provider is responsible for one or more discrete aspects of the Trust's business (e.g., the Adviser is responsible for the day-to-day management of the Fund's portfolio investments) and, consequently, for managing the risks associated with that business. The Board has emphasized to the funds' service providers the importance of maintaining vigorous risk management.

The Trustees' role in risk oversight begins before the inception of a fund, at which time certain of the fund's service providers present the Board with information concerning the investment objective(s), strategies and risks of the fund as well as proposed investment limitations for the fund. Additionally, the fund's adviser provides the Board with an overview of, among other things, its investment philosophy, brokerage practices and compliance infrastructure. Thereafter, the Board continues its oversight function as various personnel, including the Trust's Chief Compliance Officer, as well as personnel of the adviser and other service providers, such as the fund's independent accountants, make periodic reports to the Audit Committee or to the Board with respect to various aspects of risk management. The Board and the Audit Committee oversee efforts by management and service providers to manage risks to which the funds may be exposed.

The Board is responsible for overseeing the nature, extent and quality of the services provided to the funds by the adviser and receives information about those services at its regular meetings. In addition, on an annual basis, in connection with its consideration of whether to renew the advisory agreement with the adviser, the Board meets with the adviser to review such services. Among other things, the Board regularly considers the adviser's adherence to the funds' investment restrictions and compliance with various fund policies and procedures and with applicable securities regulations. The Board also reviews information about the funds' investments, including, for example, reports on the adviser's use of derivatives in managing the funds, if any, as well as reports on the funds' investments in other investment companies, if any.

The Trust's Chief Compliance Officer reports regularly to the Board to review and discuss compliance issues and fund and adviser risk assessments. At least annually, the Trust's Chief Compliance Officer provides the Board with a report reviewing the adequacy and effectiveness of the Trust's policies and procedures and those of its service providers, including the adviser. The report addresses the operation of the policies and procedures of the Trust and each service provider since the date of the last report; any material changes to the policies and procedures since the date of the last report; any recommendations for material changes to the policies and procedures; and any material compliance matters since the date of the last report.

The Board receives reports from the funds' service providers regarding operational risks and risks related to the valuation and liquidity of portfolio securities. The Trust's Fair Value Pricing Committee makes regular reports to the Board concerning investments for which market quotations are not readily available. Annually, the independent registered public accounting firm reviews with the Audit Committee its audit of the funds' financial statements, focusing on major areas of risk encountered by the funds and noting any significant deficiencies or material weaknesses in the funds' internal controls. Additionally, in connection with its oversight function, the Board oversees fund management's implementation of disclosure controls and procedures, which are designed to ensure that information required to be disclosed by the Trust in its periodic reports with the SEC are recorded, processed, summarized, and reported within the required time periods. The Board also oversees the Trust's internal controls over financial reporting, which comprise policies and procedures designed to provide reasonable assurance regarding the reliability of the Trust's financial reporting and the preparation of the Trust's financial statements.

From their review of these reports and discussions with the adviser, the Chief Compliance Officer, the independent registered public accounting firm and other service providers, the Board and the Audit Committee learn in detail about the

material risks of the funds, thereby facilitating a dialogue about how management and service providers identify and mitigate those risks.

The Board recognizes that not all risks that may affect the funds can be identified and/or quantified, that it may not be practical or cost-effective to eliminate or mitigate certain risks, that it may be necessary to bear certain risks (such as investment-related risks) to achieve the funds' goals, and that the processes, procedures and controls employed to address certain risks may be limited in their effectiveness. Moreover, reports received by the Trustees as to risk management matters are typically summaries of the relevant information. Most of the funds' investment management and business affairs are carried out by or through the funds' adviser and other service providers, each of which has an independent interest in risk management but whose policies and the methods by which one or more risk management functions are carried out may differ from the funds' and each other's in the setting of priorities, the resources available or the effectiveness of relevant controls. As a result of the foregoing and other factors, the Board's ability to monitor and manage risk, as a practical matter, is subject to limitations.

**Members of the Board.** There are eight members of the Board, six of whom are not interested persons of the Trust, as that term is defined in the 1940 Act ("independent Trustees"). Robert Nesher, an interested person of the Trust, serves as Chairman of the Board. George Sullivan, Jr., an independent Trustee, serves as the lead independent Trustee. The Trust has determined its leadership structure is appropriate given the specific characteristics and circumstances of the Trust. The Trust made this determination in consideration of, among other things, the fact that the independent Trustees constitute a super-majority (75%) of the Board, the fact that the chairperson of each Committee of the Board is an independent Trustee, the amount of assets under management in the Trust, and the number of funds (and classes of shares) overseen by the Board. The Board also believes that its leadership structure facilitates the orderly and efficient flow of information to the independent Trustees from fund management.

The Board has two standing committees: the Audit Committee and the Governance Committee. The Audit Committee and Governance Committee are chaired by an independent Trustee and composed of all of the independent Trustees. In addition, the Board has a lead independent Trustee.

In his role as lead independent Trustee, Mr. Sullivan, among other things: (i) presides over Board meetings in the absence of the Chairman of the Board; (ii) presides over executive sessions of the independent Trustees; (iii) along with the Chairman of the Board, oversees the development of agendas for Board meetings; (iv) facilitates communication between the independent Trustees and management, and among the independent Trustees; (v) serves as a key point person for dealings between the independent Trustees and management; and (vi) has such other responsibilities as the Board or independent Trustees determine from time to time.

Set forth below are the names, years of birth, position with the Trust and length of time served, and the principal occupations and other directorships held during at least the last five years of each of the persons currently serving as a Trustee. There is no stated term of office for the Trustees. Nevertheless, an independent Trustee must retire from the Board as of the end of the calendar year in which such independent Trustee first attains the age of seventy-five years; provided, however, that, an independent Trustee may continue to serve for one or more additional one calendar year terms after attaining the age of seventy-five years (each calendar year a "Waiver Term") if, and only if, prior to the beginning of such Waiver Term: (1) the Governance Committee (a) meets to review the performance of the independent Trustee; (b) finds that the continued service of such independent Trustee is in the best interests of the Trust; and (c) unanimously approves excepting the independent Trustee from the general retirement policy set out above; and (2) a majority of the Trustees approves excepting the independent Trustee from the general retirement policy set out above. Unless otherwise noted, the business address of each Trustee is SEI Investments Company, One Freedom Valley Drive, Oaks, Pennsylvania

19456.

1 Denotes Trustees who may be deemed to be "interested" persons of the Fund as that term is defined in the 1940 Act by virtue of their affiliation with the Distributor and/or its affiliates.

#### Individual Trustee Qualifications

The Trust has concluded that each of the Trustees should serve on the Board because of their ability to review and understand information about the funds provided to them by management, to identify and request other information they may deem relevant to the performance of their duties, to question management and other service providers regarding material factors bearing on the management and administration of the funds, and to exercise their business judgment in a manner that serves the best interests of the funds' shareholders. The Trust has concluded that each of the Trustees should serve as a Trustee based on their own experience, qualifications, attributes and skills as described below.

The Trust has concluded that Mr. Neshor should serve as Trustee because of the experience he has gained in his various roles with SEI Investments Company, which he joined in 1974, his knowledge of and experience in the financial services industry, and the experience he has gained serving as a trustee of the Trust since 1991.

The Trust has concluded that Mr. Doran should serve as Trustee because of the experience he gained serving as a Partner in the Investment Management and Securities Industry Practice of a large law firm, his experience in and knowledge of the financial services industry, and the experience he has gained serving as a trustee of the Trust since 1991.

The Trust has concluded that Mr. Darr should serve as Trustee because of his background in economics, the business experience he gained in a variety of roles with different financial and banking institutions and as a founder of a money management firm, his knowledge of the financial services industry, and the experience he has gained serving as a trustee of the Trust since 2008.

The Trust has concluded that Mr. Grause should serve as Trustee because of the knowledge and experience he gained in a variety of leadership roles with different financial institutions, his knowledge of the mutual fund and investment management industries, and his past experience as an interested trustee and chair of the investment committee for a multi-managed investment company.

The Trust has concluded that Mr. Johnson should serve as Trustee because of the experience he gained as a senior vice president, corporate finance, of a Fortune 500 company, his experience in and knowledge of the financial services and banking industries, the experience he gained serving as a director of other mutual funds, and the experience he has gained serving as a trustee of the Trust since 2005.

The Trust has concluded that Ms. Krikorian should serve as Trustee because of the experience she gained serving as a legal and financial services consultant, in-house counsel to a large custodian bank and Vice President of Compliance of an investment adviser, her background in fiduciary and banking law, her experience in and knowledge of the financial services industry, and the experience she has gained serving as a trustee of the Trust since 2005.

The Trust has concluded that Mr. Specca should serve as Trustee because of the knowledge and experience he gained serving as president of a mutual fund company and portfolio manager for a \$95 billion complex of asset allocation funds, and his over 25 years of experience working in a management capacity with mutual fund boards.

The Trust has concluded that Mr. Sullivan should serve as Trustee because of the experience he gained as a certified public accountant and financial consultant, his experience in and knowledge of public company accounting and auditing and the financial services industry, the experience he gained as an officer of a large financial services firm in its operations department, and his experience from serving as a trustee of the Trust since 1999.

In its periodic assessment of the effectiveness of the Board, the Board considers the complementary individual skills and experience of the individual Trustees primarily in the broader context of the Board's overall composition so that the Board, as a body, possesses the appropriate (and appropriately diverse) skills and experience to oversee the business of the funds.

**Board Committees.** The Board has established the following standing committees:

- **Audit Committee.** The Board has a standing Audit Committee that is composed of each of the independent Trustees. The Audit Committee operates under a written charter approved by the Board. The principal responsibilities of the Audit Committee include: (i) recommending which firm to engage as each fund's independent registered public accounting firm and whether to terminate this relationship; (ii) reviewing the independent registered public accounting firm's compensation, the proposed scope and terms of its engagement, and the firm's independence; (iii) pre-approving audit and non-audit services provided by each fund's independent registered public accounting firm to the Trust and certain other affiliated entities; (iv) serving as a channel of communication between the independent registered public accounting firm and the Trustees; (v) reviewing the results of each external audit, including any qualifications in the independent registered public

accounting firm’s opinion, any related management letter, management’s responses to recommendations made by the independent registered public accounting firm in connection with the audit, reports submitted to the Committee by the internal auditing department of the Administrator that are material to the Trust as a whole, if any, and management’s responses to any such reports; (vi) reviewing each fund’s audited financial statements and considering any significant disputes between the Trust’s management and the independent registered public accounting firm that arose in connection with the preparation of those financial statements; (vii) considering, in consultation with the independent registered public accounting firm and the Trust’s senior internal accounting executive, if any, the independent registered public accounting firms’ reports on the adequacy of the Trust’s internal financial controls; (viii) reviewing, in consultation with each fund’s independent registered public accounting firm, major changes regarding auditing and accounting principles and practices to be followed when preparing each fund’s financial statements; and (ix) other audit related matters. Messrs. Darr, Grause, Johnson, Specca and Sullivan and Ms. Krikorian currently serve as members of the Audit Committee. Mr. Sullivan serves as the Chairman of the Audit Committee. The Audit Committee meets periodically, as necessary, and met four (4) times during the most recently completed fiscal year.

- Governance Committee.** The Board has a standing Governance Committee (formerly the Nominating Committee) that is composed of each of the independent Trustees. The Governance Committee operates under a written charter approved by the Board. The principal responsibilities of the Governance Committee include: (i) considering and reviewing Board governance and compensation issues; (ii) conducting a self-assessment of the Board’s operations; (iii) selecting and nominating all persons to serve as independent Trustees and evaluating the qualifications of “interested” Trustee candidates; and (iv) reviewing shareholder recommendations for nominations to fill vacancies on the Board if such recommendations are submitted in writing and addressed to the Committee at the Trust’s office. Ms. Krikorian and Messrs. Darr, Grause, Johnson, Specca and Sullivan currently serve as members of the Governance Committee. Ms. Krikorian serves as the Chairman of the Governance Committee. The Governance Committee meets periodically, as necessary, and met four (4) times during the most recently completed fiscal year.

**Fair Value Pricing Committee.** The Board has also established a standing Fair Value Pricing Committee that is composed of various representatives of the Trust’s service providers, as appointed by the Board. The Fair Value Pricing Committee operates under procedures approved by the Board. The principal responsibility of the Fair Value Pricing Committee is to determine the fair value of securities for which current market quotations are not readily available. The Fair Value Pricing Committee’s determinations are reviewed by the Board.

**Fund Shares Owned by Board Members.** The following table shows the dollar amount range of each Trustee’s “beneficial ownership” of shares of the Fund as of the end of the most recently completed calendar year. Dollar amount ranges disclosed are established by the SEC. “Beneficial ownership” is determined in accordance with Rule 16a-1(a)(2) under the 1934 Act. The Trustees and officers of the Trust own less than 1% of the outstanding shares of the Trust.

Sullivan	\$113,296	N/A	N/A	\$113,296 for service on one (1) board

<sup>1</sup> All funds in the Fund Complex are series of the Trust.

**Trust Officers.** Set forth below are the names, years of birth, position with the Trust and length of time served, and the principal occupations for the last five years of each of the persons currently serving as executive officers of the Trust. There is no stated term of office for the officers of the Trust. Unless otherwise noted, the business address of each officer is SEI Investments Company, One Freedom Valley Drive, Oaks, Pennsylvania 19456. The Chief Compliance Officer is the only officer who receives compensation from the Trust for his services.

Certain officers of the Trust also serve as officers of one or more mutual funds for which SEI Investments Company or its affiliates act as investment manager, administrator or distributor.

Name and Year of Birth	Position with Trust and Length of Time Served	Principal Occupations in Past 5 Years
Michael Beattie (Born: 1965)	President (since 2011)	Director of Client Service, SEI Investments, since 2004.
John Bourgeois (Born: 1973)	Assistant Treasurer (since 2017)	Fund Accounting Manager, SEI Investments, since 2000.

Dianne M. Descoteaux (Born: 1977)	Vice President and Secretary (since 2011)	Counsel at SEI Investments since 2010. Associate at Morgan, Lewis & Bockius LLP from 2006 to 2010.
Russell Emery (Born: 1962)	Chief Compliance Officer (since 2006)	Chief Compliance Officer of SEI Structured Credit Fund, LP since June 2007. Chief Compliance Officer of SEI Alpha Strategy Portfolios, LP from June 2007 to September 2013. Chief Compliance Officer of The Advisors' Inner Circle Fund II, Bishop Street Funds, The KP Funds, The Advisors' Inner Circle Fund III, Winton Diversified Opportunities Fund (closed-end investment company), Gallery Trust, Schroder Series Trust, Schroder Global Series Trust, SEI Institutional Managed Trust, SEI Asset Allocation Trust, SEI Institutional International Trust, SEI Institutional Investments Trust, SEI Daily Income Trust, SEI Tax Exempt Trust, Adviser Managed Trust, New Covenant Funds, SEI Insurance Products Trust and SEI Catholic Values Trust. Chief Compliance Officer of SEI Opportunity Fund, L.P. to 2010. Chief Compliance Officer of O'Connor EQUUS (closed-end investment company) to 2016. Chief Compliance Officer of SEI Liquid Asset Trust to 2016. Chief Compliance Officer of Winton Series Trust to 2017.
John Y. Kim (Born: 1981)	Vice President and Assistant Secretary (since 2014)	Attorney, SEI Investments (2014-present). Associate, Stradley Ronon Stevens & Young, LLP (2009-2014).
Robert Morrow (Born: 1968)	Vice President (since 2017)	Account Manager, SEI Investments, since 2007.
Bridget E. Sudall (Born: 1980)	Anti-Money Laundering Compliance Officer and Privacy Officer (since 2015)	Senior Associate and AML Officer, Morgan Stanley Alternative Investment Partners from April 2011 to March 2015. Investor Services Team Lead, Morgan Stanley Alternative Investment Partners from 2007 to 2011.

Name and Year of Birth	Position with Trust and Length of Time Served	Principal Occupations in Past 5 Years
Lisa Whittaker (Born: 1978)	Vice President and Assistant Secretary (since 2013)	Attorney, SEI Investments (2012-present). Associate Counsel and Compliance Officer, The Glenmede Trust Company, N.A. (2011-2012). Associate, Drinker Biddle & Reath LLP (2006-2011).

### PURCHASING AND REDEEMING SHARES

Purchases and redemptions may be made through the Transfer Agent on any day the New York Stock Exchange (the “NYSE”) is open for business. Shares of the Fund are offered and redeemed on a continuous basis. Currently, the Trust is closed for business when the following holidays are observed: New Year’s Day, Martin Luther King Jr. Day, Presidents’ Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving and Christmas.

It is currently the Trust’s policy to pay all redemptions in cash. The Trust retains the right, however, to alter this policy to provide for redemptions in whole or in part by a distribution in-kind of securities held by the Fund in lieu of cash. Shareholders may incur brokerage charges on the sale of any such securities so received in payment of redemptions. A shareholder will at all times be entitled to aggregate cash redemptions from all funds of the Trust up to the lesser of \$250,000 or 1% of the Trust’s net assets during any 90-day period. The Trust has obtained an exemptive order from the SEC that permits the Fund to make in-kind redemptions to those shareholders of the Fund that are affiliated with the Trust solely by their ownership of a certain percentage of the Trust’s investment portfolios.

The Trust reserves the right to suspend the right of redemption and/or to postpone the date of payment upon redemption during times when the NYSE is closed, other than during customary weekends or holidays, for any period on which trading on the NYSE is restricted (as determined by the SEC by rule or regulation), or during the existence of an emergency (as determined by the SEC by rule or regulation) as a result of which disposal or valuation of the Fund’s securities is not reasonably practicable, or for such other periods as the SEC has by order permitted. The Trust also reserves the right to suspend sales of shares of the Fund for any period during which the NYSE, the Adviser, the Administrator, the Transfer Agent and/or the Custodian are not open for business.

### DETERMINATION OF NET ASSET VALUE

**General Policy.** The Fund adheres to Section 2(a)(41), and Rule 2a-4 thereunder, of the 1940 Act with respect to the valuation of portfolio securities. In general, securities for which market quotations are readily available are valued at current market value, and all other securities are valued at fair value in accordance with procedures adopted by the Board. In complying with the 1940 Act, the Trust relies on guidance provided by the SEC and by the SEC staff in various interpretive letters and other guidance.

**Equity Securities.** Securities listed on a securities exchange, market or automated quotation system for which quotations are readily available (except for securities traded on NASDAQ), including securities traded over-the-counter, are valued at the last quoted sale price on an exchange or market (foreign or domestic) on which they are traded on the valuation date (or at approximately 4:00 p.m. Eastern Time if such exchange is normally open at that time), or, if there is no such reported sale on the valuation date, at the most recent quoted bid price. For securities traded on NASDAQ, the NASDAQ Official Closing Price will be used. If such prices are not available or determined to not represent the fair value of the security as of the Fund’s pricing time, the security will be valued at fair value as determined in good faith using methods

approved by the Board.

**Money Market Securities and other Debt Securities.** If available, money market securities and other debt securities are priced based upon valuations provided by recognized independent, third-party pricing agents. Such values generally reflect the last reported sales price if the security is actively traded. The third-party pricing agents may also value debt securities by employing methodologies that utilize actual market transactions, broker-supplied valuations, or other methodologies designed to identify the market value for such securities. Such methodologies generally consider such factors as security prices, yields, maturities, call features, ratings and developments relating to specific securities in arriving at valuations. Money market securities and other debt securities with remaining maturities of sixty days or less may be valued at their amortized cost, which approximates market value. If such prices are not available or determined to not represent the fair value of the security as of the Fund's pricing time, the security will be valued at fair value as determined in good faith using methods approved by the Board.

**Foreign Securities.** The prices for foreign securities are reported in local currency and converted to U.S. dollars using currency exchange rates. Exchange rates are provided daily by recognized independent pricing agents.

**Derivatives and Other Complex Securities.** Exchange traded options on securities and indices purchased by the Fund generally are valued at their last trade price or, if there is no last trade price, the last bid price. Exchange traded options on securities and indices written by the Fund generally are valued at their last trade price or, if there is no last trade price, the last asked price. In the case of options traded in the over-the-counter market, if the OTC option is also an exchange traded option, the Fund will follow the rules regarding the valuation of exchange traded options. If the OTC option is not also an exchange traded option, the Fund will value the option at fair value in accordance with procedures adopted by the Board.

Futures and swaps cleared through a central clearing house ("centrally cleared swaps") are valued at the settlement price established each day by the board of the exchange on which they are traded. The daily settlement prices for financial futures are provided by an independent source. On days when there is excessive volume or market volatility, or the future or centrally cleared swap does not end trading by the time the Fund calculates NAV, the settlement price may not be available at the time at which the Fund calculates its NAV. On such days, the best available price (which is typically the last sales price) may be used to value the Fund's futures or centrally cleared swaps position.

Foreign currency forward contracts are valued at the current day's interpolated foreign exchange rate, as calculated using the current day's spot rate, and the thirty, sixty, ninety and one-hundred eighty day forward rates provided by an independent source.

If available, non-centrally cleared swaps, collateralized debt obligations, collateralized loan obligations and bank loans are priced based on valuations provided by an independent third party pricing agent. If a price is not available from an independent third party pricing agent, the security will be valued at fair value as determined in good faith using methods approved by the Board.

**Use of Third-Party Independent Pricing Agents and Independent Brokers.** Pursuant to contracts with the Administrator, prices for most securities held by the Fund are provided daily by third-party independent pricing agents that are approved by the Board. The valuations provided by third-party independent pricing agents are reviewed daily by the Administrator.

If a security price cannot be obtained from an independent, third-party pricing agent, the Administrator shall seek to obtain a bid price from at least one independent broker.

**Fair Value Procedures.** Securities for which market prices are not “readily available” or which cannot be valued using the methodologies described above are valued in accordance with Fair Value Procedures established by the Board and implemented through the Fair Value Pricing Committee. The members of the Fair Value Pricing Committee report, as necessary, to the Board regarding portfolio valuation determinations. The Board, from time to time, will review these methods of valuation and will recommend changes which may be necessary to assure that the investments of the Fund are valued at fair value.

Some of the more common reasons that may necessitate a security being valued using Fair Value Procedures include: the security’s trading has been halted or suspended; the security has been de-listed from a national exchange; the security’s primary trading market is temporarily closed at a time when under normal conditions it would be open; the security has not been traded for an extended period of time; the security’s primary pricing source is not able or willing to provide a price; trading of the security is subject to local government-imposed restrictions; or a significant event with respect to a security has occurred after the close of the market or exchange on which the security principally trades and before the time the Fund calculates NAV. When a security is valued in accordance with the Fair Value Procedures, the Fair Value Pricing Committee will determine the value after taking into consideration relevant information reasonably available to the Fair Value Pricing Committee.

## **TAXES**

The following is only a summary of certain additional U.S. federal income tax considerations generally affecting the Fund and its shareholders that is intended to supplement the discussion contained in the Prospectus. No attempt is made to present a detailed explanation of the tax treatment of the Fund or its shareholders, and the discussion here and in the Prospectus is not intended as a substitute for careful tax planning. Shareholders are urged to consult their tax advisors with specific reference to their own tax situations, including their state, local, and foreign tax liabilities.

This general discussion of certain federal income tax consequences is based on the Code and the regulations issued thereunder as in effect on the date of this SAI. New legislation, as well as administrative changes or court decisions, may significantly change the conclusions expressed herein, and may have a retroactive effect with respect to the transactions contemplated herein.

**Qualification as a Regulated Investment Company (“RIC”).** The Fund intends to qualify and elect to be treated as a RIC. By following such a policy, the Fund expects to eliminate or reduce to a nominal amount the federal taxes to which it may be subject. If the Fund qualifies as a RIC, it will generally not be subject to federal income taxes on the net investment income and net realized capital gains that the Fund timely distributes to its shareholders. The Board reserves the right not to maintain the qualification of the Fund as a RIC if it determines such course of action to be beneficial to shareholders.

In order to qualify as a RIC under the Code, the Fund must distribute annually to its shareholders at least 90% of its net investment income (which, includes dividends, taxable interest, and the excess of net short-term capital gains over net long-term capital losses, less operating expenses) and at least 90% of its net tax exempt interest income, for each tax year, if any (the “Distribution Requirement”) and also must meet certain additional requirements. Among these requirements are the following: (i) at least 90% of the Fund’s gross income each taxable year must be derived from dividends, interest, payments with respect to certain securities loans, and gains from the sale or other disposition of stock, securities, or foreign currencies, or other income (including but not limited to gains from options, futures or forward contracts) derived with respect to its business of investing in such stock, securities, or currencies, and net income derived from an interest in

a qualified publicly traded partnership (the “Qualifying Income Test”); and (ii) at the close of each quarter of the Fund’s taxable year: (A) at least 50% of the value of the Fund’s total assets must be represented by cash and cash items, U.S. government securities, securities of other RICs and other securities, with such other securities limited, in respect to any one issuer, to an amount not greater than 5% of the value of the Fund’s total assets and that does not represent more than 10% of the outstanding voting securities of such issuer including the equity securities of a qualified publicly traded partnership, and (B) not more than 25% of the value of the Fund’s total assets is invested, including through corporations in which the Fund owns a 20% or more voting stock interest, in the securities (other than U.S. government securities or the securities of other RICs) of any one issuer or the securities (other than the securities of another RIC) of two or more issuers that the Fund controls and which are engaged in the same or similar trades or businesses or related trades or businesses, or the securities of one or more qualified publicly traded partnerships (the “Asset Test”).

Although the Fund intends to distribute substantially all of its net investment income and may distribute its capital gains for any taxable year, the Fund will be subject to federal income taxation to the extent any such income or gains are not distributed.

If the Fund fails to satisfy the Qualifying Income or Asset Tests in any taxable year, the Fund may be eligible for relief provisions if the failures are due to reasonable cause and not willful neglect and if a penalty tax is paid with respect to each failure to satisfy the applicable requirements. Additionally, relief is provided for certain de minimis failures of the diversification requirements where the Fund corrects the failure within a specified period. If the Fund fails to maintain qualification as a RIC for a tax year, and the relief provisions are not available, the Fund will be subject to federal income tax at regular corporate rates without any deduction for distributions to shareholders. In such case, its shareholders would be taxed as if they received ordinary dividends, although corporate shareholders could be eligible for the dividends received deduction (subject to certain limitations) and individuals may be able to benefit from the lower tax rates available to qualified dividend income. In addition, the Fund could be required to recognize unrealized gains, pay substantial taxes and interest, and make substantial distributions before requalifying as a RIC. The Board reserves the right not to maintain the qualification of the Fund as a RIC if it determines such course of action to be beneficial to shareholders.

The Fund may elect to treat part or all of any “qualified late year loss” as if it had been incurred in the succeeding taxable year in determining the Fund’s taxable income, net capital gain, net short-term capital gain, and earnings and profits. The effect of this election is to treat any such “qualified late year loss” as if it had been incurred in the succeeding taxable year in characterizing Fund distributions for any calendar year. A “qualified late year loss” generally includes net capital loss, net long-term capital loss, or net short-term capital loss incurred after October 31 of the current taxable year (commonly referred to as “post-October losses”) and certain other late-year losses.

The treatment of capital loss carryovers for the Fund is similar to the rules that apply to capital loss carryovers of individuals, which provide that such losses are carried over indefinitely. If the Fund has a “net capital loss” (that is, capital losses in excess of capital gains) for a taxable year beginning after December 22, 2010 (a “Post-2010 Loss”), the excess of the Fund’s net short-term capital losses over its net long-term capital gains is treated as a short-term capital loss arising on the first day of the Fund’s next taxable year, and the excess (if any) of the Fund’s net long-term capital losses over its net short-term capital gains is treated as a long-term capital loss arising on the first day of the Fund’s next taxable year. The Fund’s unused capital loss carryforwards that arose in taxable years that began on or before December 22, 2010 (“Pre-2011 Losses”) are available to be applied against future capital gains, if any, realized by the Fund prior to the expiration of those carryforwards, generally eight years after the year in which they arose. The Fund’s Post-2010 Losses must be fully utilized before the Fund will be permitted to utilize carryforwards of Pre-2011 Losses. In addition, the carryover of capital losses may be limited under the general loss limitation rules if the Fund experiences an ownership change as defined in the Code.

**Federal Excise Tax.** Notwithstanding the Distribution Requirement described above, which generally requires the Fund to distribute at least 90% of its annual investment company taxable income and the excess of its exempt interest income (but does not require any minimum distribution of net capital gain), the Fund will be subject to a nondeductible 4% federal excise tax to the extent it fails to distribute by the end of the calendar year at least 98% of its ordinary income and 98.2% of its capital gain net income (the excess of short- and long-term capital gains over short- and long-term capital losses) for the one-year period ending on October 31 of such year (including any retained amount from the prior calendar year on which the Fund paid no federal income tax). The Fund intends to make sufficient distributions to avoid liability for federal excise tax, but can make no assurances that such tax will be completely eliminated. The Fund may in certain circumstances be required to liquidate Fund investments in order to make sufficient distributions to avoid federal excise tax liability at a time when the Adviser might not otherwise have chosen to do so, and liquidation of investments in such circumstances may affect the ability of the Fund to satisfy the requirement for qualification as a RIC.

**Distributions to Shareholders.** The Fund receives income generally in the form of dividends and interest on investments. This income, plus net short-term capital gains, if any, less expenses incurred in the operation of the Fund, constitutes the Fund's net investment income from which dividends may be paid to you. Any distributions by the Fund from such income will be taxable to you as ordinary income or at the lower capital gains rates that apply to individuals receiving qualified dividend income, whether you take them in cash or in additional shares.

Distributions by the Fund are currently eligible for the reduced maximum tax rate to individuals of 20% (lower rates apply to individuals in lower tax brackets) to the extent that the Fund receives qualified dividend income on the securities it holds and the Fund reports the distributions as qualified dividend income. Qualified dividend income is, in general, dividend income from taxable domestic corporations and certain foreign corporations (e.g., foreign corporations incorporated in a possession of the United States or in certain countries with a comprehensive tax treaty with the United States, or the stock of which is readily tradable on an established securities market in the United States). A dividend will not be treated as qualified dividend income to the extent that (i) the shareholder has not held the shares on which the dividend was paid for more than 60 days during the 121-day period that begins on the date that is 60 days before the date on which the shares become "ex-dividend" (which is the day on which declared distributions (dividends or capital gains) are deducted from the Fund's assets before it calculates the NAV) with respect to such dividend, (ii) the Fund has not satisfied similar holding period requirements with respect to the securities it holds that paid the dividends distributed to the shareholder), (iii) the shareholder is under an obligation (whether pursuant to a short sale or otherwise) to make related payments with respect to substantially similar or related property, or (iv) the shareholder elects to treat such dividend as investment income under section 163(d)(4)(B) of the Code. Therefore, if you lend your shares in the Fund, such as pursuant to a securities lending arrangement, you may lose the ability to treat dividends (paid while the shares are held by the borrower) as qualified dividend income. Distributions that the Fund receives from an ETF or underlying fund taxable as a RIC or a REIT will be treated as qualified dividend income only to the extent so reported by such ETF, underlying fund or REIT. Distributions by the Fund of its net short-term capital gains will be taxable as ordinary income. Capital gain distributions consisting of the Fund's net capital gains will be taxable as long-term capital gains for individual shareholders currently set at a maximum rate of 20%, regardless of how long the shareholder has owned the shares.

In the case of corporate shareholders, Fund distributions (other than capital gain distributions) generally qualify for the dividends-received deduction to the extent such distributions are so reported and do not exceed the gross amount of qualifying dividends received by the Fund for the year. Generally, and subject to certain limitations (including certain holding period limitations), a dividend will be treated as a qualifying dividend if it has been received from a domestic corporation. All such qualifying dividends (including the deducted portion) must be included in your alternative

minimum taxable income calculation.

If the Fund's distributions exceed its taxable income and capital gains realized during a taxable year, all or a portion of the distributions made in the same taxable year may be recharacterized as a return of capital to shareholders. A return of capital distribution will generally not be taxable, but will reduce each shareholder's cost basis in the Fund and result in a higher reported capital gain or lower reported capital loss when those shares on which the distribution was received are sold.

A dividend or distribution received shortly after the purchase of shares reduces the NAV of the shares by the amount of the dividend or distribution and, although in effect a return of capital, will be taxable to the shareholder. If the NAV of shares were reduced below the shareholder's cost by dividends or distributions representing gains realized on sales of securities, such dividends or distributions would be a return of investment though taxable to the shareholder in the same manner as other dividends or distributions.

The Fund (or its administrative agents) will inform you of the amount of your ordinary income dividends, qualified dividend income and capital gain distributions, if any, and will advise you of their tax status for federal income tax purposes shortly after the close of each calendar year. If you have not held Fund shares for a full year, the Fund may report and distribute to you, as ordinary income, qualified dividend income or capital gain, a percentage of income that is not equal to the actual amount of such income earned during the period of your investment in the Fund.

Dividends declared to shareholders of record in October, November or December and actually paid in January of the following year will be treated as having been received by shareholders on December 31 of the calendar year in which declared. Under this rule, therefore, a shareholder may be taxed in one year on dividends or distributions actually received in January of the following year.

**Sales, Exchanges, or Redemptions.** Any gain or loss recognized on a sale, exchange, or redemption of shares of the Fund by a shareholder who is not a dealer in securities will generally, for individual shareholders, be treated as a long-term capital gain or loss if the shares have been held for more than twelve months and otherwise will be treated as a short-term capital gain or loss. However, if shares on which a shareholder has received a long-term capital gain distribution are subsequently sold, exchanged, or redeemed and such shares have been held for six months or less, any loss recognized will be treated as a long-term capital loss to the extent of the long-term capital gain distribution. In addition, the loss realized on a sale or other disposition of shares will be disallowed to the extent a shareholder repurchases (or enters into a contract to or option to repurchase) shares within a period of 61 days (beginning 30 days before and ending 30 days after the disposition of the shares). This loss disallowance rule will apply to shares received through the reinvestment of dividends during the 61-day period. For tax purposes, an exchange of your Fund shares for shares of a different fund is the same as a sale.

U.S. individuals with income exceeding \$200,000 (\$250,000 if married and filing jointly) are subject to a 3.8% Medicare contribution tax on their "net investment income," including interest, dividends, and capital gains (including any capital gains realized on the sale or exchange of shares of the Fund).

The Fund (or its administrative agents) must report to the Internal Revenue Service ("IRS") and furnish to Fund shareholders the cost basis information for Fund shares purchased on or after January 1, 2012, and sold on or after that date. In addition to reporting the gross proceeds from the sale of Fund shares, the Fund (or its administrative agent) is also required to report the cost basis information for such shares and indicate whether these shares have a short-term or long-term holding period. For each sale of its shares, the Fund will permit its shareholders to elect from among several IRS-

accepted cost basis methods, including average cost. In the absence of an election, the Fund will use the average basis method. The cost basis method elected by shareholders (or the cost basis method applied by default) for each sale of the Fund's shares may not be changed after the settlement date of each such sale of the Fund's shares. Shareholders should consult their tax advisors to determine the best IRS-accepted cost basis method for their tax situation and to obtain more information about cost basis reporting. Shareholders also should carefully review any cost basis information provided to them and make any additional basis, holding period or other adjustments that are required when reporting these amounts on their federal income tax returns.

**Tax Treatment of Complex Securities.** The Fund may invest in complex securities. These investments may be subject to numerous special and complex tax rules. These rules could affect the Fund's ability to qualify as a RIC, affect whether gains and losses recognized by the Fund are treated as ordinary income or capital gain, cause the Fund to recognize income or gain without a corresponding receipt of cash, accelerate the recognition of income to the Fund and/or defer the Fund's ability to recognize losses, and, in limited cases, subject the Fund to U.S. federal income tax on income from certain of its foreign securities. In turn, these rules may affect the amount, timing or character of the income distributed to you by the Fund and may require the Fund to sell securities to mitigate the effect of these rules and prevent disqualification of the Fund as a RIC at a time when the Adviser might not otherwise have chosen to do so.

Certain derivative investment by the Fund, such as exchange-traded products and over-the-counter derivatives, may not produce qualifying income for purposes of the "Qualifying Income Test" described above, which must be met in order for the Fund to maintain its status as a RIC under the Code. In addition, the determination of the value and the identity of the issuer of such derivative investments are often unclear for purposes of the "Asset Test" described above. The Fund intends to carefully monitor such investments to ensure that any non-qualifying income does not exceed permissible limits and to ensure that it is adequately diversified under the Asset Test. The Fund, however, may not be able to accurately predict the non-qualifying income from these investments and there are no assurances that the IRS will agree with the Fund's determination of the "Asset Test" with respect to such derivatives.

The Fund is required for federal income tax purposes to mark-to-market and recognize as income for each taxable year its net unrealized gains and losses on certain futures contracts as of the end of the year as well as those actually realized during the year. Gain or loss from futures and options contracts on broad-based indexes required to be marked to market will be 60% long-term and 40% short-term capital gain or loss. Application of this rule may alter the timing and character of distributions to shareholders. The Fund may be required to defer the recognition of losses on futures contracts, options contracts and swaps to the extent of any unrecognized gains on offsetting positions held by the Fund. These provisions may also require the Fund to mark-to-market certain types of positions in its portfolio (i.e., treat them as if they were closed out), which may cause the Fund to recognize income without receiving cash with which to make distributions in amounts necessary to satisfy the Distribution Requirement and for avoiding the excise tax discussed above. Accordingly, in order to avoid certain income and excise taxes, the Fund may be required to liquidate its investments at a time when the Fund's investment managers might not otherwise have chosen to do so.

With respect to investments in STRIPS, treasury receipts, and other zero coupon securities which are sold at original issue discount and thus do not make periodic cash interest payments, the Fund will be required to include as part of its current income the imputed interest on such obligations even though the Fund has not received any interest payments on such obligations during that period. Because the Fund intends to distribute all of its net investment income to its shareholders, the Fund may have to sell Fund securities to distribute such imputed income which may occur at a time when the Fund's investment managers would not have chosen to sell such securities and which may result in taxable gain or loss.

Any market discount recognized on a bond is taxable as ordinary income. A market discount bond is a bond acquired in

the secondary market at a price below redemption value or adjusted issue price if issued with original issue discount. Absent an election by the Fund to include the market discount in income as it accrues, gain on the Fund's disposition of such an obligation will be treated as ordinary income rather than capital gain to the extent of the accrued market discount.

The Fund may invest in inflation-linked debt securities. Any increase in the principal amount of an inflation-linked debt security will be original interest discount, which is taxable as ordinary income and is required to be distributed, even though the Fund will not receive the principal, including any increase thereto, until maturity. As noted above, if the Fund invests in such securities it may be required to liquidate other investments, including at times when it is not advantageous to do so, in order to satisfy its distribution requirements and to eliminate any possible taxation at the Fund level.

In general, for purposes of the Qualifying Income Test described above, income derived from a partnership will be treated as qualifying income only to the extent such income is attributable to items of income of the partnership that would be qualifying income if realized directly by the Fund. However, 100% of the net income derived from an interest in a "qualified publicly traded partnership" (generally, a partnership (i) interests in which are traded on an established securities market or are readily tradable on a secondary market or the substantial equivalent thereof, (ii) that derives at least 90% of its income from the passive income sources specified in Code section 7704(d), and (iii) that derives less than 90% of its income from the same sources as described in the Qualifying Income Test) will be treated as qualifying income. In addition, although in general the passive loss rules of the Code do not apply to RICs, such rules do apply to a RIC with respect to items attributable to an interest in a qualified publicly traded partnership.

The Fund intends to invest in certain MLPs which may be treated as qualified publicly traded partnerships ("QPTPs"). Income from QPTPs is qualifying income for purposes of the Qualifying Income Test, but the Fund's investment in one or more of such QPTPs is limited under the Asset Test to no more than 25% of the value of the Fund's assets. The Fund will monitor its investments in such QPTPs in order to ensure compliance with the Qualifying Income and Asset Tests.

Investments in QPTPs may require the Fund to accrue and distribute income not yet received. To generate sufficient cash to make the requisite distributions, the Fund may be required to sell securities in its portfolio (including when it is not advantageous to do so) that it otherwise would have continued to hold. The Fund's investments in QPTPs may at other times result in the Fund's receipt of nontaxable cash distributions from a QPTP and if the Fund then distributes these nontaxable distributions to Fund shareholders, it could constitute a return of capital to Fund shareholders for federal income tax purposes. Any cash distributions received by the Fund from a QPTP in excess of the Fund's tax basis therein generally will be considered to be gain from the sale or exchange of the Fund's QPTP shares. The Fund's tax basis in its investments in a QPTP generally is equal to the amount the Fund paid for its interests in the QPTP (i) increased by the Fund's allocable share of the QPTP's net income and certain QPTP debt, if any, and (ii) decreased by the Fund's allocable share of the QPTP's net losses and distributions received by the Fund from the QPTP.

MLPs and other partnerships that the Fund may invest in will deliver Form K-1s to the Fund to report their share of income, gains, losses, deductions and credits of the MLP or other partnership. These Form K-1s may be delayed and may not be received until after the time that the Fund issues its tax reporting statements. As a result, the Fund may at times find it necessary to reclassify the amount and character of its distributions to you after it issues your tax reporting statement. When such reclassification is necessary, the Fund (or its administrative agent) will send you a corrected, final Form 1099-DIV to reflect the reclassified information. If you receive a corrected Form 1099-DIV, use the information on this corrected form, and not the information on the previously issued tax reporting statement, in completing your tax returns.

The Fund may invest in REITs. Investments in REIT equity securities may require the Fund to accrue and distribute

income not yet received. To generate sufficient cash to make the requisite distributions, the Fund may be required to sell securities in its portfolio (including when it is not advantageous to do so) that it otherwise would have continued to hold. The Fund's investments in REIT equity securities may at other times result in the Fund's receipt of cash in excess of the REIT's earnings; if the Fund distributes these amounts, these distributions could constitute a return of capital to the Fund's shareholders for federal income tax purposes. Dividends paid by a REIT, other than capital gain distributions, will be taxable as ordinary income up to the amount of the REIT's current and accumulated earnings and profits. Capital gain dividends paid by a REIT to the Fund will be treated as long term capital gains by the Fund and, in turn, may be distributed by the Fund to its shareholders as a capital gain distribution. Dividends received by the Fund from a REIT generally will not constitute qualified dividend income or qualify for the dividends received deduction. If a REIT is operated in a manner such that it fails to qualify as a REIT, an investment in the REIT would become subject to double taxation, meaning the taxable income of the REIT would be subject to federal income tax at regular corporate rates without any deduction for dividends paid to shareholders and the dividends would be taxable to shareholders as ordinary income (or possibly as qualified dividend income) to the extent of the REIT's current and accumulated earnings and profits.

REITs in which the Fund invests often do not provide complete and final tax information to the Fund until after the time that the Fund issues a tax reporting statement. As a result, the Fund may at times find it necessary to reclassify the amount and character of its distributions to you after it issues your tax reporting statement. When such reclassification is necessary, the Fund (or its administrative agent) will send you a corrected, final Form 1099-DIV to reflect the reclassified information. If you receive a corrected Form 1099-DIV, use the information on this corrected form, and not the information on the previously issued tax reporting statement, in completing your tax returns.

The Fund intends to invest in royalty trusts. Depending on the U.S. federal income tax classification of these royalty trusts in which the Fund invests, securities issued by certain royalty trusts (such as royalty trusts which are grantor trusts for U.S. federal income tax purposes) may not produce qualifying income for purposes of the Qualifying Income Test. Additionally, the Fund may be deemed to directly own the assets of each royalty trust, and would need to look to such assets when determining its compliance with the Asset Test. Certain Canadian royalty trusts may be treated as a corporation for U.S. federal income tax purposes and distributions from such trusts may be qualifying income when received by the Fund. The Fund will monitor its investments in royalty trusts with the objective of maintaining its continued qualification as a RIC under the Code.

If the Fund owns shares in certain foreign investment entities, referred to as "passive foreign investment companies" or "PFICs," the Fund will generally be subject to one of the following special tax regimes: (i) the Fund may be liable for U.S. federal income tax, and an additional interest charge, on a portion of any "excess distribution" from such foreign entity or any gain from the disposition of such shares, even if the entire distribution or gain is paid out by the Fund as a dividend to its shareholders; (ii) if the Fund were able and elected to treat a PFIC as a "qualified electing fund" or "QEF," the Fund would be required each year to include in income, and distribute to shareholders in accordance with the distribution requirements set forth above, the Fund's pro rata share of the ordinary earnings and net capital gains of the PFIC, whether or not such earnings or gains are distributed to the Fund; or (iii) the Fund may be entitled to mark-to-market annually shares of the PFIC, whether or not any distributions are made to the Fund, and in such event would be required to distribute to shareholders any such mark-to-market gains in accordance with the distribution requirements set forth above. The Fund intends to make the appropriate tax elections, if possible, and take any additional steps that are necessary to mitigate the effect of these rules.

**Certain Foreign Currency Tax Issues.** The Fund's transactions in foreign currencies and forward foreign currency contracts will generally be subject to special provisions of the Code that, among other things, may affect the character of

gains and losses realized by the Fund (i.e., may affect whether gains or losses are ordinary or capital), accelerate recognition of income to the Fund and defer losses. These rules could therefore affect the character, amount and timing of distributions to shareholders. These provisions also may require the Fund to mark-to-market certain types of positions in its portfolio (i.e., treat them as if they were closed out) which may cause the Fund to recognize income without receiving cash with which to make distributions in amounts necessary to satisfy the Distribution Requirements and for avoiding the excise tax described above. The Fund intends to monitor its transactions, intends to make the appropriate tax elections, and intends to make the appropriate entries in its books and records when it acquires any foreign currency or forward foreign currency contract in order to mitigate the effect of these rules so as to prevent disqualification of the Fund as a RIC and minimize the imposition of income and excise taxes.

The U.S. Treasury Department has authority to issue regulations that would exclude foreign currency gains from the Qualifying Income Test described above if such gains are not directly related to the Fund's business of investing in stock or securities (or options and futures with respect to stock or securities). Accordingly, regulations may be issued in the future that could treat some or all of the Fund's non-U.S. currency gains as non-qualifying income, thereby potentially jeopardizing the Fund's status as a RIC for all years to which the regulations are applicable.

**Foreign Taxes.** Dividends and interest received by the Fund may be subject to income, withholding or other taxes imposed by foreign countries and U.S. possessions that would reduce the yield on the Fund's stock or securities. Tax conventions between certain countries and the U.S. may reduce or eliminate these taxes. Foreign countries generally do not impose taxes on capital gains with respect to investments by foreign investors. If more than 50% of the value of the Fund's total assets at the close of its taxable year consists of stocks or securities of foreign corporations, the Fund will be eligible to, and intends to, file an election with the IRS that may enable shareholders, in effect, to receive either the benefit of a foreign tax credit, or a deduction from such taxes, with respect to any foreign and U.S. possessions income taxes paid by the Fund, subject to certain limitations. Pursuant to the election, the Fund will treat those taxes as dividends paid to its shareholders. Each such shareholder will be required to include a proportionate share of those taxes in gross income as income received from a foreign source and must treat the amount so included as if the shareholder had paid the foreign tax directly. The shareholder may then either deduct the taxes deemed paid by him or her in computing his or her taxable income or, alternatively, use the foregoing information in calculating any foreign tax credit they may be entitled to use against the shareholders' federal income tax. If the Fund makes the election, the Fund (or its administrative agent) will report annually to its shareholders the respective amounts per share of the Fund's income from sources within, and taxes paid to, foreign countries and U.S. possessions.

**Tax-Exempt Shareholders.** Certain tax-exempt shareholders, including qualified pension plans, individual retirement accounts, salary deferral arrangements, 401(k)s, and other tax-exempt entities, generally are exempt from federal income taxation except with respect to their unrelated business taxable income ("UBTI"). Under current law, the Fund generally serves to block UBTI from being realized by its tax-exempt shareholders. However, notwithstanding the foregoing, the tax-exempt shareholder could realize UBTI by virtue of an investment in the Fund where, for example: (i) the Fund invests in residual interests of Real Estate Mortgage Investment Conduits ("REMICs"), (ii) the Fund invests in a REIT that is a taxable mortgage pool ("TMP") or that has a subsidiary that is a TMP or that invests in the residual interest of a REMIC, or (iii) shares in the Fund constitute debt-financed property in the hands of the tax-exempt shareholder within the meaning of section 514(b) of the Code. Charitable remainder trusts are subject to special rules and should consult their tax advisor. The IRS has issued guidance with respect to these issues and prospective shareholders, especially charitable remainder trusts, are strongly encouraged to consult their tax advisors regarding these issues.

**Backup Withholding.** The Fund will be required in certain cases to withhold at a rate of 28% and remit to the U.S. Treasury the amount withheld on amounts payable to any shareholder who: (i) has provided the Fund either an incorrect

tax identification number or no number at all; (ii) is subject to backup withholding by the IRS for failure to properly report payments of interest or dividends; (iii) has failed to certify to the Fund that such shareholder is not subject to backup withholding; or (iv) has failed to certify to the Fund that the shareholder is a U.S. person (including a resident alien).

**Non-U.S. Investors.** Any non-U.S. investors in the Fund may be subject to U.S. withholding and estate tax and are encouraged to consult their tax advisors prior to investing in the Fund. Foreign shareholders (i.e., nonresident alien individuals and foreign corporations, partnerships, trusts and estates) are generally subject to U.S. withholding tax at the rate of 30% (or a lower tax treaty rate) on distributions derived from taxable ordinary income. The Fund may, under certain circumstances, report all or a portion of a dividend as an “interest-related dividend” or a “short-term capital gain dividend,” which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met. Short-term capital gain dividends received by a nonresident alien individual who is present in the U.S. for a period or periods aggregating 183 days or more during the taxable year are not exempt from this 30% withholding tax. Gains realized by foreign shareholders from the sale or other disposition of shares of the Fund generally are not subject to U.S. taxation, unless the recipient is an individual who is physically present in the U.S. for 183 days or more per year. Foreign shareholders who fail to provide an applicable IRS form may be subject to backup withholding on certain payments from the Fund. Backup withholding will not be applied to payments that are subject to the 30% (or lower applicable treaty rate) withholding tax described in this paragraph. Different tax consequences may result if the foreign shareholder is engaged in a trade or business within the United States. In addition, the tax consequences to a foreign shareholder entitled to claim the benefits of a tax treaty may be different than those described above.

Under legislation generally known as “FATCA” (the Foreign Account Tax Compliance Act), the Fund is required to withhold 30% of certain ordinary dividends it pays, and, after December 31, 2018, 30% of the gross proceeds of share redemptions and certain capital gain dividends it pays, to shareholders that fail to meet prescribed information reporting or certification requirements. In general, no such withholding will be required with respect to a U.S. person or non-U.S. individual that timely provides the certifications required by the Fund or its agent on a valid IRS Form W-9 or applicable IRS Form W-8, respectively. Shareholders potentially subject to withholding include foreign financial institutions (“FFIs”), such as non-U.S. investment funds, and non-financial foreign entities (“NFFE”). To avoid withholding under FATCA, an FFI generally must enter into an information sharing agreement with the IRS in which it agrees to report certain identifying information (including name, address, and taxpayer identification number) with respect to its U.S. account holders (which, in the case of an entity shareholder, may include its direct and indirect U.S. owners), and an NFFE generally must identify and provide other required information to the Fund or other withholding agent regarding its U.S. owners, if any. Such non-U.S. shareholders also may fall into certain exempt, excepted or deemed compliant categories as established by regulations and other guidance. A non-U.S. shareholder resident or doing business in a country that has entered into an intergovernmental agreement with the U.S. to implement FATCA will be exempt from FATCA withholding provided that the shareholder and the applicable foreign government comply with the terms of the agreement.

A non-U.S. entity that invests in the Fund will need to provide the Fund with documentation properly certifying the entity’s status under FATCA in order to avoid FATCA withholding. Non-U.S. investors in the Fund should consult their tax advisors in this regard.

**Tax Shelter Reporting Regulations.** Under U.S. Treasury regulations, generally, if a shareholder recognizes a loss of \$2 million or more for an individual shareholder or \$10 million or more for a corporate shareholder, the shareholder must file with the IRS a disclosure statement on Form 8886. Direct shareholders of portfolio securities are in many cases excepted from this reporting requirement, but under current guidance, shareholders of a RIC such as the Fund are not excepted. Future guidance may extend the current exception from this reporting requirement to shareholders of most or all RICs.

The fact that a loss is reportable under these regulations does not affect the legal determination of whether the taxpayer's treatment of the loss is proper. Shareholders should consult their tax advisors to determine the applicability of these regulations in light of their individual circumstances.

**State Taxes.** Depending upon state and local law, distributions by the Fund to its shareholders and the ownership of such shares may be subject to state and local taxes. Rules of state and local taxation of dividend and capital gains distributions from RICs often differ from the rules for federal income taxation described above. It is expected that the Fund will not be liable for any corporate excise, income or franchise tax in Massachusetts if it qualifies as a RIC for federal income tax purposes.

Many states grant tax-free status to dividends paid to you from interest earned on direct obligations of the U.S. government, subject in some states to minimum investment requirements that must be met by the Fund. Investment in Ginnie Mae or Fannie Mae securities, banker's acceptances, commercial paper, and repurchase agreements collateralized by U.S. government securities do not generally qualify for such tax-free treatment. The rules on exclusion of this income are different for corporate shareholders. Shareholders are urged to consult their tax advisors regarding state and local taxes applicable to an investment in the Fund.

The Fund's shares held in a tax-qualified retirement account will generally not be subject to federal taxation on income and capital gains distributions from the Fund until a shareholder begins receiving payments from their retirement account. Because each shareholder's tax situation is different, shareholders should consult their tax advisor about the tax implications of an investment in the Fund.

## FUND TRANSACTIONS

**Brokerage Transactions.** Generally, equity securities, both listed and over-the-counter, are bought and sold through brokerage transactions for which commissions are payable. Purchases from underwriters will include the underwriting commission or concession, and purchases from dealers serving as market makers will include a dealer's mark-up or reflect a dealer's mark-down. Money market securities and other debt securities are usually bought and sold directly from the issuer or an underwriter or market maker for the securities. Generally, the Fund will not pay brokerage commissions for such purchases. When a debt security is bought from an underwriter, the purchase price will usually include an underwriting commission or concession. The purchase price for securities bought from dealers serving as market makers will similarly include the dealer's mark up or reflect a dealer's mark down. When the Fund executes transactions in the over-the-counter market, it will generally deal with primary market makers unless prices that are more favorable are otherwise obtainable.

In addition, an adviser may place a combined order for two or more accounts it manages, including the Fund, engaged in the purchase or sale of the same security if, in its judgment, joint execution is in the best interest of each participant and will result in best price and execution. Transactions involving commingled orders are allocated in a manner deemed equitable to each account or the Fund. Although it is recognized that, in some cases, the joint execution of orders could adversely affect the price or volume of the security that a particular account or the Fund may obtain, it is the opinion of the advisers that the advantages of combined orders outweigh the possible disadvantages of separate transactions.

For the fiscal years ended October 31, 2015 and 2016, the Fund paid the following aggregate brokerage commissions on portfolio transactions:

<i>2015</i>	<i>2016</i>
-------------	-------------

<i>2015</i>	<i>2016</i>
\$2 <sup>1</sup>	\$0

1 Represents the period from May 1, 2015 (commencement of Fund operations) to October 31, 2015.

**Brokerage Selection.** The Trust does not expect to use one particular broker or dealer, and when one or more brokers is believed capable of providing the best combination of price and execution, an adviser may select a broker based upon brokerage or research services provided to the adviser. The advisers may pay a higher commission than otherwise obtainable from other brokers in return for such services only if a good faith determination is made that the commission is reasonable in relation to the services provided.

Section 28(e) of the 1934 Act permits an adviser, under certain circumstances, to cause the Fund to pay a broker or dealer a commission for effecting a transaction in excess of the amount of commission another broker or dealer would have charged for effecting the transaction in recognition of the value of brokerage and research services provided by the broker or dealer. In addition to agency transactions, an adviser may receive brokerage and research services in connection with certain riskless principal transactions, in accordance with applicable SEC guidance. Brokerage and research services include: (1) furnishing advice as to the value of securities, the advisability of investing in, purchasing or selling securities, and the availability of securities or purchasers or sellers of securities; (2) furnishing analyses and reports concerning issuers, industries, securities, economic factors and trends, portfolio strategy, and the performance of accounts; and (3) effecting securities transactions and performing functions incidental thereto (such as clearance, settlement, and custody). In the case of research services, the advisers believe that access to independent investment research is beneficial to their investment decision-making processes and, therefore, to the Fund.

To the extent that research services may be a factor in selecting brokers, such services may be in written form or through direct contact with individuals and may include information as to particular companies and securities as well as market, economic, or institutional areas and information which assists in the valuation and pricing of investments. Examples of research-oriented services for which the advisers might utilize Fund commissions include research reports and other information on the economy, industries, sectors, groups of securities, individual companies, statistical information, political developments, technical market action, pricing and appraisal services, credit analysis, risk measurement analysis, performance and other analysis. An adviser may use research services furnished by brokers in servicing all client accounts and not all services may necessarily be used by the adviser in connection with the Fund or any other specific client account that paid commissions to the broker providing such services. Information so received by the adviser will be in addition to and not in lieu of the services required to be performed by the Adviser under the Advisory Agreement. Any advisory or other fees paid to the advisers are not reduced as a result of the receipt of research services.

In some cases an adviser may receive a service from a broker that has both a “research” and a “non-research” use. When this occurs, the adviser makes a good faith allocation, under all the circumstances, between the research and non-research uses of the service. The percentage of the service that is used for research purposes may be paid for with client commissions, while the adviser will use its own funds to pay for the percentage of the service that is used for non-research purposes. In making this good faith allocation, the advisers face a potential conflict of interest, but the advisers believe that their allocation procedures are reasonably designed to ensure that they appropriately allocate the anticipated use of such services to their research and non-research uses.

From time to time, an adviser may purchase new issues of securities for clients, including the Fund, in a fixed price offering. In these situations, the seller may be a member of the selling group that will, in addition to selling securities, provide the advisers with research services. The Financial Industry Regulatory Authority (“FINRA”) has adopted rules expressly permitting these types of arrangements under certain circumstances. Generally, the seller will provide research

“credits” in these situations at a rate that is higher than that which is available for typical secondary market transactions. These arrangements may not fall within the safe harbor of Section 28(e).

For the fiscal year ended October 31, 2016, the Fund did not pay any commissions on brokerage transactions directed to brokers pursuant to an agreement or understanding whereby the broker provides research or other brokerage services to an adviser.

**Brokerage with Fund Affiliates.** The Fund may execute brokerage or other agency transactions through registered broker-dealer affiliates of either the Fund or the Adviser for a commission in conformity with the 1940 Act and rules promulgated by the SEC. The 1940 Act requires that commissions paid to the affiliate by the Fund for exchange transactions not exceed “usual and customary” brokerage commissions. The rules define “usual and customary” commissions to include amounts which are “reasonable and fair compared to the commission, fee or other remuneration received or to be received by other brokers in connection with comparable transactions involving similar securities being purchased or sold on a securities exchange during a comparable period of time.” The Trustees, including those who are not “interested persons” of the Fund, have adopted procedures for evaluating the reasonableness of commissions paid to affiliates and review these procedures periodically.

For the fiscal period from May 1, 2015 (commencement of Fund operations) to October 31, 2015 and for the fiscal year ended October 31, 2016, the Fund did not pay any brokerage commissions on portfolio transactions effected by affiliated brokers.

**Securities of “Regular Broker-Dealers.”** The Fund is required to identify any securities of its “regular brokers and dealers” (as such term is defined in the 1940 Act) that the Fund held during its most recent fiscal year. During the most recent fiscal year, the Fund did not hold any securities of its “regular brokers or dealers.”

**Portfolio Turnover Rates.** Portfolio turnover rate is defined under SEC rules as the greater of the value of the securities purchased or securities sold, excluding all securities whose maturities at the time of acquisition were one-year or less, divided by the average monthly value of such securities owned during the year. Based on this definition, instruments with remaining maturities of less than one-year are excluded from the calculation of the portfolio turnover rate. Instruments excluded from the calculation of portfolio turnover generally would include the futures contracts in which the Fund may invest since such contracts generally have remaining maturities of less than one-year. The Fund may at times hold investments in other short-term instruments, such as repurchase agreements, which are excluded for purposes of computing portfolio turnover. For the fiscal years ended October 31, 2015 and 2016, the Fund’s portfolio turnover rates were as follows:

Portfolio Turnover Rates	
2015	2016
78% <sup>1</sup>	118%

1 Represents the period from May 1, 2015 (commencement of Fund operations) to October 31, 2015.

## PORTFOLIO HOLDINGS

The Board has approved policies and procedures that govern the timing and circumstances regarding the disclosure of Fund portfolio holdings information to shareholders and third parties. These policies and procedures are designed to ensure that disclosure of information regarding the Fund’s portfolio securities is in the best interests of Fund shareholders, and include procedures to address conflicts between the interests of the Fund’s shareholders, on the one hand, and those of

the Adviser, principal underwriter or any affiliated person of the Fund, the Adviser or the principal underwriter, on the other. Pursuant to such procedures, the Board has authorized the Adviser's Chief Compliance Officer (the "Authorized Person") to authorize the release of the Fund's portfolio holdings, as necessary, in conformity with the foregoing principles. The Authorized Person reports at least quarterly to the Board regarding the implementation of such policies and procedures.

Pursuant to applicable law, the Fund is required to disclose its complete portfolio holdings quarterly, within 60 days of the end of each fiscal quarter (currently, each January 31, April 30, July 31 and October 31). The Fund discloses a complete schedule of investments, following the second and fourth fiscal quarters, in each Semi-Annual Report and Annual Report to Fund shareholders or, following the first and third fiscal quarters, in quarterly holdings reports filed with the SEC on Form N-Q. Semi-Annual and Annual Reports are distributed to Fund shareholders.

Quarterly holdings reports filed with the SEC on Form N-Q are not distributed to Fund shareholders, but are available, free of charge, on the EDGAR database on the SEC's website at [www.sec.gov](http://www.sec.gov). Within 10 days of the end of each calendar quarter, the Fund will post its complete portfolio holdings on the internet at <http://www.westwoodfunds.com>. These postings generally remain until replaced by new postings as described above. The Adviser may exclude any portion of the Fund's portfolio holdings from such publication when deemed in the best interest of the Fund.

The Fund's policies and procedures provide that the Authorized Persons may authorize disclosure of portfolio holdings information to third parties at differing times and/or with different lag times than the information posted to the internet; provided that the recipient is, either by contractual agreement or otherwise by law, (i) required to maintain the confidentiality of the information and (ii) prohibited from using the information to facilitate or assist in any securities transactions or investment program. No compensation or other consideration is paid to or received by any party in connection with the disclosure of portfolio holdings information, including the Fund, the Adviser and their affiliates or recipient of the Fund's portfolio holdings information. The Fund will review a third party's request for portfolio holdings information to determine whether the third party has legitimate business objectives in requesting such information.

In addition, the Fund's service providers, such as the Custodian, Administrator and Transfer Agent, may receive portfolio holdings information as frequently as daily in connection with their services to the Fund. In addition to any contractual provisions relating to confidentiality of information that may be included in the service providers contract with the Trust, these arrangements impose obligations on the Fund's service providers that would prohibit them from disclosing or trading on the Fund's non-public information. Financial printers and pricing information vendors may receive portfolio holdings information, as necessary, in connection with their services to the Fund.

The portfolio holdings policy may not limit access to portfolio holdings information in all circumstances. For example, an adviser may manage accounts that have investment objectives and strategies similar to those of the Fund. Because these accounts are similarly managed, portfolio holdings may be similar across the accounts. In that case, an investor in another account may be able to infer the portfolio holdings or other portfolio characteristics of the Fund from the portfolio holdings in the investor's account.

## **DESCRIPTION OF SHARES**

The Declaration of Trust authorizes the issuance of an unlimited number of funds and shares of each fund, each of which represents an equal proportionate interest in that fund with each other share. Shares are entitled upon liquidation to a pro rata share in the net assets of the fund. Shareholders have no preemptive rights. The Declaration of Trust provides that the Trustees may create additional series or classes of shares. All consideration received by the Trust for shares of any

additional fund and all assets in which such consideration is invested would belong to that fund and would be subject to the liabilities related thereto. Share certificates representing shares will not be issued. The Fund's shares, when issued, are fully paid and non-assessable.

## **SHAREHOLDER LIABILITY**

The Trust is an entity of the type commonly known as a "Massachusetts business trust." Under Massachusetts law, shareholders of such a trust could, under certain circumstances, be held personally liable as partners for the obligations of the trust. Even if, however, the Trust were held to be a partnership, the possibility of the shareholders incurring financial loss for that reason appears remote because the Declaration of Trust contains an express disclaimer of shareholder liability for obligations of the Trust and requires that notice of such disclaimer be given in each agreement, obligation or instrument entered into or executed by or on behalf of the Trust or the Trustees, and because the Declaration of Trust provides for indemnification out of the Trust property for any shareholder held personally liable for the obligations of the Trust.

## **LIMITATION OF TRUSTEES' LIABILITY**

The Declaration of Trust provides that a Trustee shall be liable only for his or her own willful defaults and, if reasonable care has been exercised in the selection of officers, agents, employees or investment advisers, shall not be liable for any neglect or wrongdoing of any such person. The Declaration of Trust also provides that the Trust will indemnify its Trustees and officers against liabilities and expenses incurred in connection with actual or threatened litigation in which they may be involved because of their offices with the Trust unless it is determined in the manner provided in the Declaration of Trust that they have not acted in good faith in the reasonable belief that their actions were in the best interests of the Trust. However, nothing in the Declaration of Trust shall protect or indemnify a Trustee against any liability for his or her willful misfeasance, bad faith, gross negligence or reckless disregard of his or her duties. Nothing contained in this section attempts to disclaim a Trustee's individual liability in any manner inconsistent with the federal securities laws.

## **PROXY VOTING**

The Board has delegated the responsibility for decisions regarding proxy voting for securities held by the Fund to the Adviser. The Adviser will vote such proxies in accordance with its proxy voting policies and procedures, which are included in Appendix B to this SAI.

The Trust is required to disclose annually the Fund's complete proxy voting record during the most recent 12-month period ended June 30 on Form N-PX. This voting record is available: (i) without charge, upon request, by calling 1-877-FUND-WHG (1-877-386-3944) and (ii) on the SEC's website at <http://www.sec.gov>.

## **CODES OF ETHICS**

The Board, on behalf of the Trust, has adopted a Code of Ethics pursuant to Rule 17j-1 under the 1940 Act. In addition, the Adviser, the Administrator and the Distributor have each adopted Codes of Ethics pursuant to Rule 17j-1. These Codes of Ethics apply to the personal investing activities of trustees, officers and certain employees ("Access Persons"). Rule 17j-1 and the Codes of Ethics are designed to prevent unlawful practices in connection with the purchase or sale of securities by Access Persons. Under each Code of Ethics, Access Persons are permitted to invest in securities, including securities that may be purchased or held by the Fund, but are required to report their personal securities transactions for

monitoring purposes. Certain Access Persons are prohibited from engaging in personal securities transactions in securities that are held by the Fund. In addition, certain Access Persons are required to obtain approval before investing in initial public offerings or private placements or are prohibited from making such investments. Copies of these Codes of Ethics are on file with the SEC, and are available to the public.

#### **PRINCIPAL SHAREHOLDERS AND CONTROL PERSONS**

As of July 19, 2017, the following persons were record owners (or to the knowledge of the Trust, beneficial owners) of 5% or more of the shares of the Fund. The Trust believes that most of the shares referred to below were held by the below persons in accounts for their fiduciary, agency or custodial customers. Persons beneficially owning more than 25% of the Fund's outstanding shares may be deemed to "control" the Fund within the meaning of the 1940 Act. Shareholders controlling the Fund may have a significant impact on any shareholder vote of the Fund.

## APPENDIX A

### DESCRIPTION OF RATINGS

#### Description of Ratings

The following descriptions of securities ratings have been published by Moody's Investors Services, Inc. ("Moody's"), Standard & Poor's ("S&P"), and Fitch Ratings ("Fitch"), respectively.

#### DESCRIPTION OF MOODY'S GLOBAL RATINGS

Ratings assigned on Moody's global long-term and short-term rating scales are forward-looking opinions of the relative credit risks of financial obligations issued by non-financial corporates, financial institutions, structured finance vehicles, project finance vehicles, and public sector entities. Long-term ratings are assigned to issuers or obligations with an original maturity of one year or more and reflect both on the likelihood of a default on contractually promised payments and the expected financial loss suffered in the event of default. Short-term ratings are assigned to obligations with an original maturity of thirteen months or less and reflect both on the likelihood of a default on contractually promised payments and the expected financial loss suffered in the event of default.

#### Description of Moody's Global Long-Term Ratings

**Aaa** Obligations rated Aaa are judged to be of the highest quality, subject to the lowest level of credit risk.

**Aa** Obligations rated Aa are judged to be of high quality and are subject to very low credit risk.

**A** Obligations rated A are judged to be upper-medium grade and are subject to low credit risk.

**Baa** Obligations rated Baa are judged to be medium-grade and subject to moderate credit risk and as such may possess certain speculative characteristics.

**Ba** Obligations rated Ba are judged to be speculative and are subject to substantial credit risk.

**B** Obligations rated B are considered speculative and are subject to high credit risk.

**Caa** Obligations rated Caa are judged to be speculative of poor standing and are subject to very high credit risk.

**Ca** Obligations rated Ca are highly speculative and are likely in, or very near, default, with some prospect of recovery of principal and interest.

**C** Obligations rated C are the lowest rated and are typically in default, with little prospect for recovery of principal or interest.

*Note:* Moody's appends numerical modifiers 1, 2, and 3 to each generic rating classification from Aa

through Caa. The modifier 1 indicates that the obligation ranks in the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking; and the modifier 3 indicates a ranking in the lower end of that generic rating category.

### **Hybrid Indicator (hyb)**

The hybrid indicator (hyb) is appended to all ratings of hybrid securities issued by banks, insurers, finance companies, and securities firms. By their terms, hybrid securities allow for the omission of scheduled dividends, interest, or principal payments, which can potentially result in impairment if such an omission occurs. Hybrid securities may also be subject to contractually allowable write-downs of principal that could result in impairment. Together with the hybrid indicator, the long-term obligation rating assigned to a hybrid security is an expression of the relative credit risk associated with that security.

### **Description of Moody's Global Short-Term Ratings**

**P-1** Issuers (or supporting institutions) rated Prime-1 have a superior ability to repay short-term debt obligations.

**P-2** Issuers (or supporting institutions) rated Prime-2 have a strong ability to repay short-term debt obligations.

**P-3** Issuers (or supporting institutions) rated Prime-3 have an acceptable ability to repay short-term obligations.

**NP** Issuers (or supporting institutions) rated Not Prime do not fall within any of the Prime rating categories.

### **Description of Moody's U.S. Municipal Short-Term Obligation Ratings**

The Municipal Investment Grade ("MIG") scale is used to rate U.S. municipal bond anticipation notes of up to three years maturity. Municipal notes rated on the MIG scale may be secured by either pledged revenues or proceeds of a take-out financing received prior to note maturity. MIG ratings expire at the maturity of the obligation, and the issuer's long-term rating is only one consideration in assigning the MIG rating. MIG ratings are divided into three levels—MIG 1 through MIG 3—while speculative grade short-term obligations are designated SG.

Moody's U.S. municipal short-term obligation ratings are as follows:

**MIG 1** This designation denotes superior credit quality. Excellent protection is afforded by established cash flows, highly reliable liquidity support, or demonstrated broad-based access to the market for refinancing.

**MIG 2** This designation denotes strong credit quality. Margins of protection are ample, although not as large as in the preceding group.

**MIG 3** This designation denotes acceptable credit quality. Liquidity and cash-flow protection may be

narrow, and market access for refinancing is likely to be less well-established.

**SG** This designation denotes speculative-grade credit quality. Debt instruments in this category may lack sufficient margins of protection.

### **Description of Moody's Demand Obligation Ratings**

In the case of variable rate demand obligations ("VRDOs"), a two-component rating is assigned: a long or short-term debt rating and a demand obligation rating. The first element represents Moody's evaluation of risk associated with scheduled principal and interest payments. The second element represents Moody's evaluation of risk associated with the ability to receive purchase price upon demand ("demand feature"). The second element uses a rating from a variation of the MIG scale called the Variable Municipal Investment Grade ("VMIG") scale.

Moody's demand obligation ratings are as follows:

**VMIG 1** This designation denotes superior credit quality. Excellent protection is afforded by the superior short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

**VMIG 2** This designation denotes strong credit quality. Good protection is afforded by the strong short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

**VMIG 3** This designation denotes acceptable credit quality. Adequate protection is afforded by the satisfactory short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

**SG** This designation denotes speculative-grade credit quality. Demand features rated in this category may be supported by a liquidity provider that does not have an investment grade short-term rating or may lack the structural and/or legal protections necessary to ensure the timely payment of purchase price upon demand.

### **DESCRIPTION OF S&P'S ISSUE CREDIT RATINGS**

An S&P issue credit rating is a forward-looking opinion about the creditworthiness of an obligor with respect to a specific financial obligation, a specific class of financial obligations, or a specific financial program (including ratings on medium-term note programs and commercial paper programs). It takes into consideration the creditworthiness of guarantors, insurers, or other forms of credit enhancement on the obligation and takes into account the currency in which the obligation is denominated. The opinion reflects S&P's view of the obligor's capacity and willingness to meet its financial commitments as they come due, and may assess terms, such as collateral security and subordination, which could affect ultimate payment in the event of default.

Issue credit ratings can be either long-term or short-term. Short-term ratings are generally assigned to those obligations considered short-term in the relevant market. In the U.S., for example, that means

obligations with an original maturity of no more than 365 days—including commercial paper. Short-term ratings are also used to indicate the creditworthiness of an obligor with respect to put features on long-term obligations. Medium-term notes are assigned long-term ratings.

Issue credit ratings are based, in varying degrees, on S&P's analysis of the following considerations:

- The likelihood of payment—the capacity and willingness of the obligor to meet its financial commitment on a financial obligation in accordance with the terms of the obligation;
- The nature of and provisions of the financial obligation; and the promise S&P imputes; and
- The protection afforded by, and relative position of, the obligation in the event of bankruptcy, reorganization, or other arrangement under the laws of bankruptcy and other laws affecting creditors' rights.

Issue ratings are an assessment of default risk, but may incorporate an assessment of relative seniority or ultimate recovery in the event of default. Junior obligations are typically rated lower than senior obligations, to reflect the lower priority in bankruptcy. (Such differentiation may apply when an entity has both senior and subordinated obligations, secured and unsecured obligations, or operating company and holding company obligations.)

#### **Description of S&P's Long-Term Issue Credit Ratings\***

**AAA** An obligation rated 'AAA' has the highest rating assigned by S&P. The obligor's capacity to meet its financial commitment on the obligation is extremely strong.

**AA** An obligation rated 'AA' differs from the highest-rated obligations only to a small degree. The obligor's capacity to meet its financial commitment on the obligation is very strong.

**A** An obligation rated 'A' is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. However, the obligor's capacity to meet its financial commitment on the obligation is still strong.

**BBB** An obligation rated 'BBB' exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

**BB; B; CCC; CC; and C** Obligations rated 'BB', 'B', 'CCC', 'CC', and 'C' are regarded as having significant speculative characteristics. 'BB' indicates the least degree of speculation and 'C' the highest. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposures to adverse conditions.

**BB** An obligation rated 'BB' is less vulnerable to nonpayment than other speculative issues. However, it faces major ongoing uncertainties or exposure to adverse business, financial, or economic conditions which could lead to the obligor's inadequate capacity to meet its financial commitment on the obligation.

**B** An obligation rated 'B' is more vulnerable to nonpayment than obligations rated 'BB', but the obligor currently has the capacity to meet its financial commitment on the obligation. Adverse business, financial, or economic conditions will likely impair the obligor's capacity or willingness to meet its financial commitment on the obligation.

**CCC** An obligation rated 'CCC' is currently vulnerable to nonpayment, and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitment on the obligation. In the event of adverse business, financial, or economic conditions, the obligor is not likely to have the capacity to meet its financial commitment on the obligation.

**CC** An obligation rated 'CC' is currently highly vulnerable to nonpayment. The 'CC' rating is used when a default has not yet occurred, but S&P expects default to be a virtual certainty, regardless of the anticipated time to default.

**C** An obligation rated 'C' is currently highly vulnerable to nonpayment, and the obligation is expected to have lower relative seniority or lower ultimate recovery compared to obligations that are rated higher.

**D** An obligation rated 'D' is in default or in breach of an imputed promise. For non-hybrid capital instruments, the 'D' rating category is used when payments on an obligation are not made on the date due, unless S&P believes that such payments will be made within five business days in the absence of a stated grace period or within the earlier of the stated grace period or 30 calendar days. The 'D' rating also will be used upon the filing of a bankruptcy petition or the taking of similar action and where default on an obligation is a virtual certainty, for example due to automatic stay provisions. An obligation's rating is lowered to 'D' if it is subject to a distressed exchange offer.

**NR** This indicates that no rating has been requested, or that there is insufficient information on which to base a rating, or that S&P does not rate a particular obligation as a matter of policy.

\*The ratings from 'AA' to 'CCC' may be modified by the addition of a plus (+) or minus (-) sign to show relative standing within the major rating categories.

### **Description of S&P's Short-Term Issue Credit Ratings**

**A-1** A short-term obligation rated 'A-1' is rated in the highest category by S&P. The obligor's capacity to meet its financial commitment on the obligation is strong. Within this category, certain obligations are designated with a plus sign (+). This indicates that the obligor's capacity to meet its financial commitment on these obligations is extremely strong.

**A-2** A short-term obligation rated 'A-2' is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher rating categories. However, the obligor's capacity to meet its financial commitment on the obligation is satisfactory.

**A-3** A short-term obligation rated 'A-3' exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

**B** A short-term obligation rated ‘B’ is regarded as vulnerable and has significant speculative characteristics. The obligor currently has the capacity to meet its financial commitments; however, it faces major ongoing uncertainties which could lead to the obligor’s inadequate capacity to meet its financial commitments.

**C** A short-term obligation rated ‘C’ is currently vulnerable to nonpayment and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitment on the obligation.

**D** A short-term obligation rated ‘D’ is in default or in breach of an imputed promise. For non-hybrid capital instruments, the ‘D’ rating category is used when payments on an obligation are not made on the date due, unless S&P believes that such payments will be made within any stated grace period. However, any stated grace period longer than five business days will be treated as five business days. The ‘D’ rating also will be used upon the filing of a bankruptcy petition or the taking of a similar action and where default on an obligation is a virtual certainty, for example due to automatic stay provisions. An obligation’s rating is lowered to ‘D’ if it is subject to a distressed exchange offer.

### **Description of S&P’s Municipal Short-Term Note Ratings**

An S&P U.S. municipal note rating reflects S&P’s opinion about the liquidity factors and market access risks unique to the notes. Notes due in three years or less will likely receive a note rating. Notes with an original maturity of more than three years will most likely receive a long-term debt rating. In determining which type of rating, if any, to assign, S&P’s analysis will review the following considerations:

- Amortization schedule—the larger the final maturity relative to other maturities, the more likely it will be treated as a note; and
- Source of payment—the more dependent the issue is on the market for its refinancing, the more likely it will be treated as a note.

S&P’s municipal short-term note ratings are as follows:

**SP-1** Strong capacity to pay principal and interest. An issue determined to possess a very strong capacity to pay debt service is given a plus (+) designation.

**SP-2** Satisfactory capacity to pay principal and interest, with some vulnerability to adverse financial and economic changes over the term of the notes.

**SP-3** Speculative capacity to pay principal and interest.

### **DESCRIPTION OF FITCH’S CREDIT RATINGS**

Fitch’s credit ratings provide an opinion on the relative ability of an entity to meet financial commitments, such as interest, preferred dividends, repayment of principal, insurance claims or counterparty obligations. Credit ratings are used by investors as indications of the likelihood of receiving the money owed to them in accordance with the terms on which they invested.

The terms “investment grade” and “speculative grade” have established themselves over time as shorthand to describe the categories ‘AAA’ to ‘BBB’ (investment grade) and ‘BB’ to ‘D’ (speculative grade). The terms “investment grade” and “speculative grade” are market conventions, and do not imply any recommendation or endorsement of a specific security for investment purposes. “Investment grade” categories indicate relatively low to moderate credit risk, while ratings in the “speculative” categories either signal a higher level of credit risk or that a default has already occurred.

Fitch’s credit ratings do not directly address any risk other than credit risk. In particular, ratings do not deal with the risk of a market value loss on a rated security due to changes in interest rates, liquidity and other market considerations. However, in terms of payment obligation on the rated liability, market risk may be considered to the extent that it influences the *ability* of an issuer to pay upon a commitment. Ratings nonetheless do not reflect market risk to the extent that they influence the size or other conditionality of the *obligation* to pay upon a commitment (for example, in the case of index-linked bonds).

In the default components of ratings assigned to individual obligations or instruments, the agency typically rates to the likelihood of non-payment or default in accordance with the terms of that instrument’s documentation. In limited cases, Fitch may include additional considerations (i.e. rate to a higher or lower standard than that implied in the obligation’s documentation). In such cases, the agency will make clear the assumptions underlying the agency’s opinion in the accompanying rating commentary.

A designation of Not Rated or NR is used to denote securities not rated by Fitch where Fitch has rated some, but not all, securities comprising an issuance capital structure.

### **Description of Fitch’s Long-Term Corporate Finance Obligations Ratings**

**AAA** Highest credit quality. ‘AAA’ ratings denote the lowest expectation of credit risk. They are assigned only in cases of exceptionally strong capacity for payment of financial commitments. This capacity is highly unlikely to be adversely affected by foreseeable events.

**AA** Very high credit quality. ‘AA’ ratings denote expectations of very low credit risk. They indicate very strong capacity for payment of financial commitments. This capacity is not significantly vulnerable to foreseeable events.

**A** High credit quality. ‘A’ ratings denote expectations of low credit risk. The capacity for payment of financial commitments is considered strong. This capacity may, nevertheless, be more vulnerable to adverse business or economic conditions than is the case for higher ratings.

**BBB** Good credit quality. ‘BBB’ ratings indicate that expectations of credit risk are currently low. The capacity for payment of financial commitments is considered adequate but adverse business or economic conditions are more likely to impair this capacity.

**BB** Speculative. ‘BB’ ratings indicate an elevated vulnerability to credit risk, particularly in the event of adverse changes in business or economic conditions over time; however, business or financial alternatives

may be available to allow financial commitments to be met.

**B** Highly speculative. ‘B’ ratings indicate that material credit risk is present.

**CCC** Substantial credit risk. ‘CCC’ ratings indicate that substantial credit risk is present.

**CC** Very high levels of credit risk. ‘CC’ ratings indicate very high levels of credit risk.

**C** Exceptionally high levels of credit risk. ‘C’ ratings indicate exceptionally high levels of credit risk.

Defaulted obligations typically are not assigned ‘RD’ or ‘D’ ratings, but are instead rated in the ‘B’ to ‘C’ rating categories, depending upon their recovery prospects and other relevant characteristics. This approach better aligns obligations that have comparable overall expected loss but varying vulnerability to default and loss.

Note: The modifiers “+” or “-” may be appended to a rating to denote relative status within major rating categories. Such suffixes are not added to the ‘AAA’ obligation rating category, or to corporate finance obligation ratings in the categories below ‘CCC’.

The subscript ‘emr’ is appended to a rating to denote embedded market risk which is beyond the scope of the rating. The designation is intended to make clear that the rating solely addresses the counterparty risk of the issuing bank. It is not meant to indicate any limitation in the analysis of the counterparty risk, which in all other respects follows published Fitch criteria for analyzing the issuing financial institution. Fitch does not rate these instruments where the principal is to any degree subject to market risk.

### **Description of Fitch’s Short-Term Ratings**

A short-term issuer or obligation rating is based in all cases on the short-term vulnerability to default of the rated entity or security stream and relates to the capacity to meet financial obligations in accordance with the documentation governing the relevant obligation. Short-Term Ratings are assigned to obligations whose initial maturity is viewed as short term based on market convention. Typically, this means up to 13 months for corporate, sovereign, and structured obligations, and up to 36 months for obligations in U.S. public finance markets.

Fitch’s short-term ratings are as follows:

**F1** Highest short-term credit quality. Indicates the strongest intrinsic capacity for timely payment of financial commitments; may have an added “+” to denote any exceptionally strong credit feature.

**F2** Good short-term credit quality. Good intrinsic capacity for timely payment of financial commitments.

**F3** Fair short-term credit quality. The intrinsic capacity for timely payment of financial commitments is adequate.

**B** Speculative short-term credit quality. Minimal capacity for timely payment of financial commitments, plus heightened vulnerability to near term adverse changes in financial and economic conditions.

**C** High short-term default risk. Default is a real possibility.

**RD** Restricted default. Indicates an entity that has defaulted on one or more of its financial commitments, although it continues to meet other financial obligations. Typically applicable to entity ratings only.

**D** Default. Indicates a broad-based default event for an entity, or the default of a short-term obligation.

**APPENDIX B –PROXY VOTING POLICIES AND PROCEDURES**

## **WESTWOOD MANAGEMENT CORP. POLICIES AND PROCEDURES FOR PROXY VOTING**

### Policy.

Westwood, as a matter of policy and as a fiduciary to our clients, has responsibility for voting proxies for portfolio securities in a manner that is consistent with the best economic interests of the clients. Our Firm maintains written policies and procedures as to the handling, research, voting and reporting of proxy voting and makes appropriate disclosures about our Firm's proxy policies and practices. Our policy and practice includes the responsibility to monitor corporate actions, receive and vote client proxies and disclose any potential conflicts of interest, and our policy and practice further is to make information available to clients about the voting of proxies for their portfolio securities and to maintain relevant and required records.

### Responsibility.

Westwood's Senior Trade Operations Analyst has the responsibility for the implementation and monitoring of our proxy voting policy, practices, disclosures and record keeping, including outlining our voting guidelines in our procedures.

### Procedures.

Westwood has engaged Broadridge for assistance with the proxy voting process for our clients. Broadridge is a leading provider of full service proxy voting services to the global financial industry. Westwood has also engaged Glass Lewis for assistance with proxy research and analysis. Glass Lewis provides complete analysis and voting recommendations on all proposals and is designed to assist investors in mitigating risk and improving long-term value. In most cases, we agree with Glass Lewis's recommendations; however, ballots are reviewed bi-monthly by our analysts and we may choose to vote differently than Glass Lewis if we believe it in the best interest of our clients.

### Responsibility.

Westwood's Senior Trade Operations Analyst has the responsibility for the implementation and monitoring of our proxy voting policy, practices, disclosures and record keeping, including outlining our voting guidelines in our procedures.

### Background.

Proxy voting is an important right of shareholders, and reasonable care and diligence must be taken to ensure that such rights are properly and timely exercised.

Investment advisers who are registered with the SEC, and who exercise voting authority with respect to client securities, are required by Rule 206(4)-6 of the Advisers Act (a) to adopt and implement written policies and procedures that are reasonably designed to ensure that client securities are voted in the best interests of clients, which must include how an adviser addresses material conflicts that may arise between an adviser's interests and those of its clients; (b) to disclose to clients how they may obtain information from the adviser with respect to the voting of proxies for their securities; (c) to describe to clients a summary of its proxy voting policies and procedures and, upon request, to furnish a copy to its clients; and (d) to maintain certain records relating to the adviser's proxy voting activities when the adviser does have proxy voting authority.

### Procedure.

Westwood has adopted the following procedures to implement the Firm's proxy voting policy, in addition to adopting the Glass Lewis Proxy Voting Guidelines, and conducts reviews to monitor and ensure the Firm's policy is observed, implemented properly and amended or updated, as appropriate:

### **Proxy Voting Records.**

With respect to proxy record keeping, Westwood maintains complete files for all clients. These files include a listing of all proxy material sent on behalf of our clients along with individual copies of each response. Client access to these files can be arranged upon request. A voting summary will be furnished upon request.

### **Voting Procedures.**

- a. All employees forward any proxy materials received on behalf of clients to Broadridge. Westwood has engaged Broadridge for assistance with the proxy voting process for our clients, and Glass Lewis provides voting recommendations;
- b. Broadridge has access to holders records and determines which client accounts hold the security to which the proxy relates;
- c. Absent material conflicts, Broadridge, with the vote recommendations from Glass Lewis, determines how Westwood should vote the proxy in accordance with applicable voting guidelines;
- d. Westwood's analysts review the Glass Lewis proxy voting recommendations on a bi-monthly basis. The analysts may choose to vote differently than Glass Lewis if they believe it is in the best interest of the client;
- e. If Westwood chooses to vote differently than Glass Lewis, then Westwood overwrites the Glass Lewis recommendation on the ProxyEdge platform. If Westwood agrees with the Glass Lewis recommendations, no action is necessary; and
- f. Broadridge completes the proxy and mails the proxy in a timely and appropriate manner.

### **Disclosure.**

- a. Westwood provides required disclosures in Form ADV Part 2A, which summarizes these proxy voting policies and procedures and includes a statement that clients may request information regarding how Westwood voted a client's proxies;
- b. Westwood's disclosure summary includes a description of how clients may obtain a copy of the Firm's proxy voting policies and procedures;
- c. Westwood's proxy voting practice is disclosed in the Firm's advisory agreements; and
- d. The Senior Trade Operations Analyst also sends a copy of this summary to all existing clients who have previously received Westwood's Disclosure Brochures, or the Senior Trade Operations Analyst may send each client the amended Disclosure Brochures. Either mailing shall highlight the inclusion of information regarding proxy voting.

### **Client Requests for Information.**

- a. All client requests for information regarding proxy votes or regarding policies and procedures that are received by any supervised person should be forwarded to the Senior Trade Operations Analyst; and
- b. In response to any request, the Senior Trade Operations Analyst prepares a written response to the client with the information requested, and, as applicable, includes the name of the issuer, the proposal voted upon, and how Westwood voted the client's proxy with respect to each proposal about which the client inquired.

### **Voting Guidelines.**

- a. Westwood has engaged Broadridge and Glass Lewis for assistance with the proxy voting process for our clients; and
- b. Westwood analysts review the Glass Lewis proxy voting recommendations using the following guidelines:
  - i. In the absence of specific voting guidelines from the client, Westwood votes proxies in the best interests of each particular client;
  - ii. Westwood's policy is to vote all proxies from a specific issuer the same way for each client absent qualifying restrictions from a client;
  - iii. Clients are permitted to place reasonable restrictions on Westwood's voting authority in the same manner that they may place such restrictions on the actual selection of account securities;

- iv. Westwood generally votes in favor of routine corporate housekeeping proposals such as the election of directors and selection of auditors absent conflicts of interest raised by an auditor's non-audit services;
- v. Westwood generally votes against proposals that cause board members to become entrenched or cause unequal voting rights; and
- vi. In reviewing proposals, Westwood further considers the opinion of management and the effect on management, and the effect on shareholder value and the issuer's business practices.

**Conflicts of Interest.**

- a. Westwood conducts periodic reviews to identify any conflicts that exist between the interests of the Firm and the client by reviewing the relationship of Westwood with the issuer of each security to determine if Westwood or any of its supervised persons has any financial, business or personal relationship with the issuer;
- b. If a material conflict of interest exists, Westwood will determine whether it is appropriate to disclose the conflict to the affected clients, to give the clients an opportunity to vote the proxies themselves, or to address the voting issue through other objective means such as voting in a manner consistent with a predetermined voting policy or receiving an independent third party voting recommendation; and
- c. Westwood will maintain a record of the voting resolution of any conflict of interest.

**Recordkeeping.**

The Senior Trade Operations Analyst retains the following proxy records in a spreadsheet in accordance with the SEC's five-year retention requirement:

- a. These policies and procedures and any amendments;
- b. Each proxy statement that Westwood receives;
- c. A record of each vote that Westwood casts;
- d. Any document Westwood created that was material to making a decision how to vote proxies, or that memorializes that decision including periodic reports to the Senior Trade Operations Analyst or proxy committee, if applicable; and
- e. A copy of each written request from a client for information on how Westwood voted such client's proxies, and a copy of any written response.

In addition to conducting initial due diligence, Westwood monitors and reviews all third-party proxy services to evaluate any conflicts of interest, consistency of voting with guidelines, and fees and disclosures, among other things. The Senior Trade Operations Analyst maintains documentation of Westwood's due diligence reviews.
